In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

All 1999 meetings (except August) will be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL,

The 1999 meeting schedule is: April 3, June 5 (picnic at Argonne National Labs), August 7, October 2, and December 4.

The CARMA Picnic will be June 5th, 1999 at the Argonne National Labs Picnic Pavilion, Cass Avenue, south of I-55 in or around Darien or Lemont. The picnic will start whenever someone arrives. The regular meeting will be in the Pavilion at 1:00 PM. If the weather is totally frightful we also have a room inside the Laboratory building available for us.

The Picnic is BYOE (Bring your own everything) If you want to eat or drink, bring it with you, as well as your BBQ or six pack.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner. The author writes a monthly
"Scanner Equipment" column for Monitoring Times magazine,
published by Grove Enterprises, but views expressed in this
article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies
is the Police Call Plus, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Other frequency web sites include:
http://www.fordyce.org/scanning/ and
http://www.scannerway.8m.com.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or

anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the

channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have

the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus

service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

Uniden sells refurbished scanners dn you can check current inventory at their web site:
http://www.uniden.com/docs/store

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

You may be able to obtain manuals for older Midland scanners from:

Midland Consumer Radio Products
1670, North Topping,
Kansas City,
MO: 64120
Phone: 816-241-8500

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer the ICOM IC-R2, Uniden/Bearcat BC3000XLT, and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

Cal Crystal Lab Inc.
1142 N. Gilbert St.
Anaheim, CA 92801

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 2000 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229, email: electra@tcon.net,

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor

controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature (logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig and Karl Klein repaired their BC210XWs by replacing the 22uF/35V C98 capacitor.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This display is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of

a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to

switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855.

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

HAMFEST/COMPUTERFEST CALENDAR 2000 - ILLINOIS
last updated August 15, 2000 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, John Wass KA9QJX, Tom Harker, and ARRL for providing some of the information.

SEPTEMBER 2000

Sep 16 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Sep 16 & 17 (Sat & Sun): Peoria, IL - Peoria Area ARC. Info: Ron Morgan, KB9NW, or John Coker, N9FAM, both c/o: PO Box 3508, Peoria, IL 61612-3508. tel: (309)692-3378. Email kb9nw@juno.com or n9fam@juno.com. http://www.peoriasuperfest.com

Sep 17 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Sep 23 & 24 (Sat & Sun): Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. http://www.chicagofmclub.org. Admission $8, good both days. Info: Mike Brost, WA9FTS, 5127 North Monterey Avenue, Norridge, IL 60706. Tel: 708-457-0966, Email: mbrost@cin.net (the biggest and best hamfest in northern IL - AJ9S)

Sep 24 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

OCTOBER 2000

Oct 1 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Oct 8 (Sun): Cedarville, IL - Stephenson County Repeater | Association amateur radio and computer hamfest. Jane Addams |

Community Center 430 W. Washington St., Cedarville IL. |
8:00am-2:00pm. Admission $4.00. No advance ticket sales. |
Indoor table cost $9.00 for one, $5.00 per each additional. |
Tailgaters $4.00 same as admission, limited space available. |
Talk in 147.390. VE testing, times to be determined. For |
table reservations: coordinator Ruben Dowman KB9OLF (815) |
563-9020, email: drads115@aol.com or Mel Welch (815) |
563-4377 or Russ Love (815) 563-4921. |

Oct 14 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Oct 15 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Oct 22 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

NOVEMBER 2000

Nov 5 (Sun): Davenport, IA - Davenport Radio Club. Iowa National Guard Hanger, Mt. Joy Airport. Talk-in 146.88 MHz repeater. http://www.gwltd.com/hamfest

Nov 11 (Sat): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Nov 12 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Nov 18 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Nov 18, 19 (Sat, Sun): Ft. Wayne, IN Fort Wayne Hamfest & Computer Expo. Allen County Amateur Radio Technical Society. 2000 Indiana ARRL State Convention. Allen County War Memorial Coliseum Exposition Center. Hours 9 AM - 4 PM EST Sat, 9 AM - 3 PM EST Sun. Admission $5 plus $2 parking. http://www.acarts.com

Nov 26 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

DECEMBER 2000

Dec 3 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Dec 16 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Dec 17 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, etc. Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet. For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 - 2000 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)241-8742, or through your local Radio Shack store. You may be able to obtain some technical assistance from Tandy by calling (800)843-7422, option 2. The RSU (Radio Shack Unlimited) phone number is (800)-433-2024.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004, but Robert Cummings has modified an LCD from a Miller Engineering (http://www.microstru.com) experimenter's kit and fitted it to his PRO-2004. See http://home.cfl.rr.com/scan/Backlight.html for details.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the

squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad (PRO-43 keypad is RSU#10789808) may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A
crystal scanner are not working and the lamps for those
channels won't light, replace IC4 or IC5 (type 7400A).

Yeah, my girlfriend is a nurse, and works in the emergency room. About two weeks ago, a women came into the ER, becuase her young child had GUM IN HER HAIR. They are not allowed to refuse treatment, so they cut the girls hair very, very, very short in the center, kinda like a reverse mohawk kind of thing. Just their way of taking out their frustrations on these morons who continue to abuse the ER.
It is a miracle these people don't kill themselves getting out of bed in the morning.
Matt

In the Navy (way back in the late 70's / early 80's, anyhow), we had
to salute them and call them sir or ma'am. They wore Gold on their
caps and, if I remember correctly, they got paid better than E-9s.

The only way they were treated different is that they (usually) got
more respect then junior officers due to the fact that they had worked
their way up to their rank. Trust me, if the Old Man wanted to know
what's what, he'll either ask the senior non-comms or the Warrant
Officers long befor a Lt.J.G. or Ensign.

5205. FS/Trade: Pro-39 - Cellular Coverage!

Newsgroup: rec.radio.scanner
Date: 2000-09-01 19:57:13 UTC
From: riradiobuff@aol.comspamsux
Message-ID: <20000901155713.00244.00002884@ng-df1.aol.com>
Source record: 80532

I have a Pro-39 handheld scanner (Made before the ban on cellular capable scanners!) that I am looking to sell or trade. Frequency coverage includes: 30-54, 108-174, 380-512, 806-960 (Complete coverage to include cellular!). It is in fair shape, a little dusty. Features include: 200 memory channels, Priority, frequency scan (scan a range of frequencies for unknown transmissions). The only problem with this scanner is that the display doesn't work and the keypad is bad, otherwise the radio works. I had frequencies programmed in when the display and keypad went and I could still listen to them (I am sure they are gone now - I've had batteries out of it for over a year now).

Radio Shack assured me that it is repariable, but their repair rate is rediculous (over $170). This would be great for someone who may have another Pro-39 and can replace the keypad and display. If I can find the Radio Shack estimate, I will include it so you can get a better idea of what you need to do.

I am willing to sell it at best offer price and I am also looking for the following items: a WORKING TV antenna rotor and control box, a 4 (or more) position antenna switch to use with a VHF radio, and a 2m yagi to use horizontal on SSB. If you are interested, please EMAIL ME DIRECTLY. Thanks.

Well, I've said it once, and I'll say it again, being a radio dealer in the USA is apparently a very lucrative enterprise, so much so that they can turn away business at the drop of a hat...

I recently placed an order on line for a radio at a well known radio dealership in the mid-west, valued at $360.00.

It was a home run for me as it was a very good price for this model, and I thought a home run for the dealer, as this was an automated sale, instant, no fuss, no muss, shoot it out and make a few bucks.

However, I requested that the item be shipped via USPS Priority Mail, insured, to my P.O. Box. The dealer refused.

Even though, I the customer was paying for the item AND shipping charges, whatever they might be, the dealer refused to do as I, the customer asked.

They stated it was too much of a hassles to have someone go to the post office to send it out, and their experience with claims has been that they have to wait a long time to get paid from the USPS. This is of course assuming they have a claim.

This may all very well be true, but I truly believe that it is pure laziness. They have been spoiled by the pick up service of UPS.

In my opinion, the service from UPS as is bad or worse. I recently purchased a humidor from someone in New Jersey, and they shipped it to me, also in NJ via UPS. Normally, this is next day delivery, yet UPS sent it to Ohio, and it took seven working days for me to get an item shipped within my own state.

On the other hand, I have been sending and receiving items almost exclusively via USPS Priority Mail, and I have NEVER had a problem. I received a package from the west coast in three days!

So, I am leaving my current job and opening up a radio dealership. If business is so good that I can turn away business, and refuse the customer his request, than I will be rich very soon.....

Dan

Why don't you share the name of the dealer so everyone who reads this
can boycott them for you? Or better yet, why don't you just take your
business elsewhere - if enough folks do the same, that 'lucrative'
radio business won't be for long...

Share the name of the dealer with us. It's been proven in the retail business that for every ONE person that complains there are at least TEN that do not and at least FIFTY that hear about the "bad" experience.

Dan

A typical response by your typical ham radio
operators! Throw rocks when someone who is looking for
a reasonable deal posts something, if only because they
want/wich they could find such a deal.
If it ain't nailed down they pocket it. If it's for sale, they get to the
hamfest at 5:00 AM to be first in lind for dibs at an item, then turn around
and put it on their table for sale an hour later (after they pull the
accessories out of it) for double the price. What a bunch of F-N lowlifes.

Most dealers ship UPS.
For them to refuse Parcel Post
is what I would have expected.
UPS works fine.

So you expect them to send a paid employee to the post office, pay travel time and wait time, vehicle expenses plus extra admin time to go around their automated efficient computerized shipping system to manually process an exception for you?

If you were an employer you would know this little courtesy you expect for free likely would cost the employer fifty dollars or more in time and expenses. If you disagree, you've never been in business. The *average* cost of an employee to the employer is 2.71 times their salary. Ask me how I know. I employ nine people.

Their job is to get the thing to you, which they are set up to do using a system which has been reliable for them.

You weren't going to pay for shipping charges "whatever they might be". You were willing to pay the dealer's UPS charge, which is probably pretty reasonable if they are doing any kind of volume. You wouldn't pay what it really would cost the dealer to make an exception for you.

You expect a lot from the place who offered to sell it the cheapest. They may make 5 points off the sale to you, after you called 10 other places on their respective 800 #s and beat them all up for the lowest price. The place you called wouldn't be the lowest price if they were running all over shipping by whatever method the customer demanded.

They would lose money on that sale to you so they, properly, declined.

And you have the freedom to spout off all over the web and take your business elsewhere. I bet none of the dealers lose any sleep over it.

For reference, we ship only by USPS or FEDEX, several hundred a month. I'm not defending UPS, just the dealer's decision.

Not true. CB radios have to be type accepted for CB use. Ham radios are
not accepted as transmitters on the CB band.

Message-ID: <FGWr5.5467$YZ2.818401@typhoonbleh.nyroc.rr.com>
Source record: 80545

Looking for a good used handheld, 20-30 ch would suffice , must be in 100% working order and respectable cosmetics, need programmable w/display, looking for a cheapie under $50 shipped. Power dropped the other night and the wife remarked how nice it would be to have a battery powered scanner! (That sounds like permission to ME!) Probably can come up with a wall wart here but one with the radio would be nice. Just a nice nightstand unit for when the fire whistle goes off in the middle of the night. If you happen to have a clean programmable desktop unit as well for cheap, would look at another one of those as well.

email replies please.

You along with many others here often miss the point of my posts.
They are always tongue in cheek, designed to induce some healthy
debate about this or that. It is alot better then the contuous run of
Mackey et al nonsense that we see here continuously.

That said, my purpose was not to start a "boycott" of anyone, and
yes, I was able to find another dealer more then willing to send the
item to me at the same price.

The name of the dealer is not important, though VERY common among most
of the dealers I have contacted. They simply refuse to ship USPS and
/ or to a postal box.

I totally agree with you Ed UPS is the worst piece of garbage Co. i have ever used. Time after time they have screwed me. My co i work for feels the same they switched to roadway and have alot less headaches.

I am sitting here waitn for a UPS RED label next day to get here.. NOTHING has arrived and its now 430pm.. they are assholes and dont give a crap about one package here one there not being on time.. Well we dont have to use them and i wish some Dealers would not use them I would pay a higher price to get my stuff here on time and in good shape.

Apparently most of you clowns missed his point completely. If he had wanted to do the business any harm, he would've let us know the name. He didn't - provoking an interesting discussion that had little to do with scanning, but provided an alternative to the typical mackey/etc. bash-a-thon.

The P.O. Box is the best way to receive items via USPS Priority mail
for both the shipper and the receiver.

The shipper is assured of a secure area where the package will remain
until being picked up, and the proper signature(s) obtained for the
insurance and the delivery confirmation. No worry of them out on a
truck, being left anywhere, without proper signatures obtained,
etc....

I am assured that the package will not be left at my doorstep or worse
when not at home. I do not have to be home, waiting endless hours for
a brown truck that never arrives when it is supposed to.

A win - win situation for both. I have shipped and received over two
hundred items this way without a problem.

Since I will never have an item shipped via UPS again, your suggestion
is moot.

How ironic.
Once upon a time, a radio seller advertised an extremely lightweight item and accessories for sale on the newsgroups that included an $8 shipping charge "via USPS Priority Mail to the lower 48." A curious sort when it comes to efficient logistics and hoping to learn something, I asked why he would not ship to Alaska and Hawaii and weren't shipping costs via Priority Mail the same as to "the lower 48"? The response that I received was somewhat startling:

"Probably....but I prefer NOT shipping to Hawaii or Alaska for various reasons. It is my perogative.
OK? Interested in the radio?

This is why I keep going back to Ebay.."

That radio seller? I'll let you guess.

I am not a battery expert, but I did get a BC245 last July (99). I too,
kept it plugged in at home.
Batteries lasted almost 8 months. So yes, you do kill them that way.

You can rig a bypass, but what I did is buy a NiMH battery pack. I now only
charge it when the batteries go down. And that is every 4-5 days. I use it
every day -- I NEVER drive to work/store/anywhere without it. toss those
NiCd batteries and get a NiMH pack. you probably noticed that the NiCds do
not last anywhere near as long. I never could get more than a day out of
them, best thing I did was overcharge and kill it.

cheers

I do business all the time with a large hobby dealer, Tower Hobbies, who is more than happy to ship USPS on request. Any business of decent size has a postage meter and a scale. _SOMEHOW_ the outgoing mail has to leave, too. Does this business not pay bills? Nowadays, one can even buy postage via outlets such as stamps.com if no postage meter is available. Some folks actually use PO boxes as their home address, especially many apartment dwellers and some country residents. It's not that far out of the ordinary for such a request to be made.

No one, other than the US Postal Service delivers to a PO box.

My brother-in law has 15 acres of "real address" and must use a PO Box.

As a retired police officer I resent your
"they are not your friends"
comments on the usegroup .
The only people who were not my friends were
those who had reason to fear arrest by the police.
What do you have to fear?

K1zw
Larry
SOC #386
Qcwa
==========
And my response to Larry:

Hello Larry:

You said
As a retired police officer I resent your
... comments on the usegroup .

I reply - as a citizen I don't care if you resent
my comments regarding the true nature of the police.

You and I have a different definition of a "friend".
You said
"The only people who were not my friends were
those who had reason to fear arrest by the police. "

The answer is simple.
A friend is not and does not act as an agent for the state.
A friend does not have the power to cause me harm.
A friend does not question me with the authority of the state.

" What do you have to fear?"
I have everything to fear from individuals who are cloaked
in the authority of the state. Individuals have been harmed
by "bad cops". Since I do not know which cop is good and
which cop is bad - every cop has the potential ability to
cause me harm.

If I am talking to a cop when that cop is acting as an agent for
the state, I have absolutely nothing to gain by that conversation.
Will anything good come from the conversation? No.
At best - the conversation will end and I will be no better off
then the point in time before the conversation began.
Could something bad come from the conversation? Yes.

Just what possible gain can I, as an individual, achieve from
a conversation with a cop who is acting in an official of the state?
Come on Larry - Answer.

Best regards
Gil Jones

FS: 7 UNITS-PRO-2006 400 CHANNEL SCANNER

WE ARE SELLING 7 UNITS FOR $1500 PLUS SHIPPING.PLEASE TAKE NOTE THAT
WE ARE SELLING THIS AS A BATCH. WE HAVE SOLD INDIVIDUAL UNITS FOR $275
EACH. THIS IS THE LAST OF THE BATCH THAT WE HAVE ACQUIRED FROM A
TELECOMMUNICATIONS COMPANY THAT UPGRADED THEIR SYSTEM.
THE REALISTIC PRO-2006 COVERS A WIDE FREQUENCY RANGE; 25-520 MHZ.,
760-823, 945 MHZ., 851-868, 945 MHZ., 896-1300 MHZ.. THE RECEIVING WAVE
MODES ARE: WIDE FM (TV SOUND, FM BROADCAST), NARROW FM (BUSINESS,
COMMUNICATIONS, HAM RADIO), AM (AIRCRAFT, CB RADIO) THIS ONE HAS THE LIGHTED
LCD, THE TWO-SECOND SCAN DELAY, A MEMORY BACK-UP, A LOCK-OUT FUNCTION, A TEN
CHANNEL STORAGE BANK AS WELL AS MONITOR BANKS. THERE IS ALSO PRIORITY
CHANNEL, DIRECT FREQUENCY SEARCH AND SOUND SQUELCH. IT HAS A BUILT-IN
SPEAKER, EXTENSION SPEAKER PLUG AND TAPE OUT JACK.
THEY DON�T SELL THIS KIND OF SCANNERS IN STORES ANYMORE, SO WHEN
THEY�RE GONE, THEY�RE GONE. THE SCANNER COMES WITH A RUBBER DUCKIE ANTENNA
AND A PIGTAIL WITH THE PROPER POLARITY FOR A 12V POWER SUPPLY FOR MOBILE
USE. IT CAN BE PLUGGED IN AT HOME WITH THE 110V POWER CORD. ANOTHER NICE
FEATURE IS THE LIGHTED DISPLAY AND THE FOLD-UP FEET UNDER THE FRONT TO GIVE
IT THE PROPER ANGLE TO MAKE IT EASY TO SEE.
THE SCANNER IS IN VERY GOOD CONDITION WITH THE REALISTIC LOGO ON
THE LEFT TOP FRONT REMOVED. THE REALISTIC STICKER ON THE BACK HAS ALSO BEEN
CUT OUT BUT THE SERIAL NUMBER STILL REMAINS.(THE REASONING FOR THIS IS THAT
THIS WAS USED COMMERCIALLY AS A PART OF A SYSTEM FOR APPROXIMATELY A YEAR ,
ACCORDING TO OUR SOURCE).ALL FLAWS ARE COSMETIC IN NATURE. THE UNIT HAS BEEN
CHECKED AND IT WORKS GREAT.WE HAVE SOLD CLOSE TO TEN UNITS AND ALL OUR
CUSTOMERS ARE SATISFIED BY THEIR PERFORMANCE.
A COPY OF THE OPERATING MANUAL AND SPEC SHEET DOWNLOADED FROM THE
REALISTIC WEBSITE IS ALSO INCLUDED. OR YOU CAN GO TO THIS WEBSITE AND
DOWNLOAD IT YOURSELF AT -

http://support.tandy.com/support_electronics/8246.htm.

You can view the items on:

http://www.geocities.com/zrecords/scanner1.jpg

That's the way they do business. They have the right to refuse your
business for whatever reason.
>
> They stated it was too much of a hassles to have someone go to the
> post office to send it out, and their experience with claims has been
> that they have to wait a long time to get paid from the USPS. This is
> of course assuming they have a claim.

Well you said it yourself...
"I thought a home run for the dealer, as this was an automated
sale, instant, no fuss, no muss, shoot it out and make a few bucks."

You created fuss, muss and turned an automated sale into a separate trip
to the post office.

In business when "it's a hassel" it really means...
"My profit margin is already slim on this item and it aint worth it cuz
I loose money."
>
> This may all very well be true, but I truly believe that it is pure
> laziness. They have been spoiled by the pick up service of UPS.

Whaaaaaaaa!!!!!! So what...that is the way they want to do it. As the
customer you did what you wanted...you stopped the purchase...welcome to
America.
>
> In my opinion, the service from UPS as is bad or worse. I recently
> purchased a humidor from someone in New Jersey, and they shipped it to

Good for you. The company you dealt with must not like the USPS
much...so I guess you both loose.

>So, I am leaving my current job and opening up a radio dealership. If
> business is so good that I can turn away business, and refuse the
> customer his request, than I will be rich very soon.....

Then you will learn the real golden rule of business...
"The customer is always right...until they cop an attitude, Then we
reserve the *right* to refuse service to anyone."

Mark

One good reason...just one.

It is my perogative.
> >OK? Interested in the radio?
> >
> >This is why I keep going back to Ebay.."

You use ebay because of the money don't you? Or do you use ebay to "pass
on good will to the radio public"
>

If you don't see it then you are blind.

So your "tounge and cheek stimulous" just backfired and made you look
like a complete dork.

So much for an attempt at tounge and cheek.
>

C'mon.....let's have that reason....
Let me guess what it is...
If you ship to alaska and get screwed you are afraid that that person
will skip to Hawaii and you won't be able to take the bus to kick his
ass. Maybe the people of Alaska and Hawaii are just all strange?????
>

EXCELLENT CONDITION with SMA antenna, manual, NiMH battery charger and two AA NiMH batteries.

Looking for base scanners such as the BC895XLT, BC9000XLT, PRO-2035, PRO-2042, PRO-2005, PRO-2006 in very good condition.

VALUE FOR VALUE - cash for the difference

>
>Good for you. The company you dealt with must not like the USPS
>much...so I guess you both loose.

Well, I never asked them to ship it USPS, I simply accepted UPS. It
was a humidor, a small item, about 50 bucks, and I figured it would be
overnight from NJ. I was wrong.
The driver told me that UPS CANNOT get people to work loading the
trucks..this is the result of such a good economy. He told me that
they cannot even read, they are so pathetic.

>>So, I am leaving my current job and opening up a radio dealership. If

>reserve the *right* to refuse service to anyone."

Well, that would be true if I did in fact "cop" an attitude, which you
assume I did. Which I did not.

I asked them if they could do it my way, they said no, and we parted
company in good terms.

Due you have a need for an SMA-TO-BNC antenna adapter that is custom made to fit and protect your H.T. or scanner radio?

Adapter allows you to:
Quickly change antennas to base,mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connection wear or from coming loose due to always having to change antennas.

Adapter features:
Gold contacts with a teflon insulation.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed for moisture and dirt protection.
The base provides an excellent support for any length of antenna or application.
No need to remove once installed to make any antenna changes.

Sizes to fit radio models:
Yaesu: VX-5, VX-1, VX-10, FT-50-R
Icom: IC-R2, IC-T8A, IC-T81A, IC-Q7A
Kenwood: TH-D7, TH-G71
Alinco: DJ-V5
Standard: C508A, C510A
Radio Shack: HTX-200, HTX-400, HTX-245
Aor: AR-16

Previewed in the May 2000 Issue of CQ Magazine.

Mark,

This post was made to invoke some debate over an experience that
happened recently in an attempt to purchase something from a radio
dealer. Not exaclty on topic, but could be as we all have to get our
equipment from somewhere. Anyway, I thought it would be better then
the Mackey, et all crap we have been seeing here lately.

I can debate my position with anyone, and enjoy the diatribe, tongue
in cheek or not. However, I am concerned when I see responses like
the one below from you and the Winstead character, which become
venomous attempts to attack me. How sad.

Well, back to the debate......

>on good will to the radio public"

Yes, because of the money. That is why I sell my equipment you fool,
to get as much of my investment as possible back. Anything wrong with
that? Why do you sell YOUR equipment, Mark? To pass on good will to
the radio public? (radio public?) Do you give your equipment away?
Ever? I have. For free. Ask me and I'll tell you about it. My
perogative.

>> Again....I am sure you are trying to equate my tongue in cheek

You asked...they said no. It's pretty trivial.

>Grove certainly endures alot of fuss and muss then.
> It's a wonder Bob is still in business, since he goes the extra mile
> to please his customers....Maybe that's why...

Maybe they are 2 different business models. They are not Grove. If Bob
grove suits you better than use him. To say "Grove does it this way" is
moot since you are the customer and have a right to choose.

Jeezzzzz Do I really gotta go into business 101 with ya?

I based that on the attitude you had in the first post. In later post
you claimed it was all "tounge and cheek", it became clear just how
unrealistic you were reacting so you claimed the whole post was "to
stimulate discussion".

Ok...You stimulated discussion...a stupid one...but better than the
other crap that was flying around here, so I will give you points for
that.

But I have to take points away because you didn't get past the troll
gate.

OK I'm probably asking a really stupid question here, but if you don't ask you can't learn. I thought the FCC controlled radio traffic in the USA. Wasn't there a ruling about you have a right to receive any radio signal that was sent in the clear, but to unscramble a signal without permission is illegal. If the police don't want people to hear them with scanners, why don't they scramble their radio calls? Do State's have the right to pass laws restricting radio reception?

Number stations in the US do the same thing that number stations do
elsewhere...code for "spooks" or spook wannabees. I imagine there are
groups out there that have both the technology and desire to communicate
in "code" thus the broadcasts you've been listening to.

Mark,

I do not want any of your "points" OK?

Who appointed you to give points to these threads anyway?

If you are unhappy with this thread, then why don't YOU move on? If
this is all so TRIVAL to you, WHY DON'T YOU MOVE ON???

> I did? Created fuss and muss by simply asking them to ship USPS
>> Priority Mail?
>
>You asked...they said no. It's pretty trivial.
>
>>Grove certainly endures alot of fuss and muss then.

>that.
A stupid discussion in your opinion, because you choose to disagree
with me.
>But I have to take points away because you didn't get past the troll
>gate.
>
Again, there is no need to call me a troll, Mark. No need at all.

It really seems like there is no room for fun and an interesting
debate on these gropus after all.

It has been reduced to continual venom, name calling, troll
deisgnations and point giving by self-appointed, pompous people such
as yourself.

Now, do I really have to go into Courtesy 101 with you?

>> I asked them if they could do it my way, they said no, and we parted

Dan,
I agree 1000%! ---UPS is a gathering of the most inept bunch of idiots in the business! I do literally 10's of thousands of dollars in internet retail purchases/sales annually. The United States Postal Service is the most reliable and cost effective delivery system in this country! (I'm not afilliated with the USPS, in spite of my screen name. I just own one of their Jeeps.) .....And postaljeep.com

Ok...maybe dork was a little stiff, Sorry. You didn't do anything to me
except make me think "hey this guy is really having "an issue" with
something pretty trival.
>
> Do you always treat someone with whom you disagree with such malice?

Malice??? If you were sitting next to me I probably would have slapped
ya.
"Dan...wake up (slap) what are you thinking bro?"
Just a little luv tap mind you.
>
> > So much for an attempt at tounge and cheek.

Agreed.
> Well I tried, if you missed it then maybe I am the moron here.

No your not a moron...just a whiner.

Now lets talk about something more fun....

If I turn on a scanner in an airplane can I die?

If I listen to fast food channels does my food stay fresher?

can I get aids from listening to cellular?

> Well, this reveals your true stupidity.

> Well, I have no concerns about my integrity. I have bought and sold
> hundreds of items here and on EBay, and never had a problem. Have
> you?

Nope...But I never questioned you integrity...just the motives.

> Well then, we wouldn't know now would we, since you simply go by
> "Mark".

Yes...Mark is the name the goverment gave me when I was relocated to the
united states.
>
> Again, someone else hiding behind anonymity.

Yes I am. People in many countries want to kill me because I know too
much. It is safer for you *not* to know.
>
> BTW, you should pay royalties for using that tag line....

I do already...I send a check via ups every month.

Markj

Interesting point.
I checked deja.com and no binary was posted here
(it appears to have been canceled).

I would seem that the only way to prove validity is to run the
information through the channels and see what pops up.

However, I find it rather odd that he would enlist in sioux city
iowa when his ISP is clearly in the upper northwest oregon area.

sounds way too fishy for me.

Thanks for the info and I'll pick up a NiHH pack, but can the NiMH battery pack be left on charge or will they suffer the same fate as the NiCads? What I liked about the Pro 34, was that whatever the state of charge of the NiCads, if I needed to go mobile, I could always toss 6 AA's in my pocket and take off and not worry about running out of power. IMHO Uniden really handicapped the 245's utility by not using standard AA cells, NiCads or otherwise. I appreciate your your valuable opinion.

The best adviced I read about the NiMH batteries was "1000 charges [newer batteries -- older about 500] is what you get, whether or not you charge it from dead state or partly discharged state" , i.e. every time you plug it in counts as a charge cycle.

So far, I have been treating my NiMH pack accordingly and it has surprised (the sceptic in) me about how well they perform -- I am a new true believer.

yeah, I would like to keep the 245 plugged in and only use the batteries when I need them, but it isn't the case, once I converted, life is the same :)

cheers

Dan, I am with you on this one. I have to drive to work and home again every day, passing at least four different post offices. No big deal to stop in and mail a package. So you let an employee go home a half hour early ask them to stop and mail a box from the post office....done. I have been in this hobby 22 years and seen a lot of 'dealers' close shop especially right here in the phila area, so if it is to much trouble for them to ship usps will see how hard it is to lock the doors for the last time. Early Thursday morning a Oklahoma City police officer, a Oklahoma Highway Patrol trooper, and 2 suspects were killed in a fiery crash on I-40 in Okla. City. The audio, while somewhat fuzzy, is available on the KFOR-TV website at the link below. Scroll down below the main picture for a link to the audio clip.

http://www.msnbc.com/local/KFOR/47521.asp#BODY

I was up late and heard this, but didn't have the recorder on myself. This is a horrible loss to the law enforcement community (of which I'm a former member), so please, show some respect in any comments you make.

Mark K5MAR
Former 911/radio dispatcher - Stillwater Police Dept.

if you mean those little black numbers that you can buy in Argos ;-) then
they operate in the 31 - 32 Mhz range - I can hear both sides of the
conversation too..... If it is DECT then forget it, or there are some I
think that operate in the 48 Mhz area with the other side on 1.7 mhz (don't
quote me on this though) someone on here should know a bit more about
this....

Which is illegal in itself as FCC regs specifically prohibit coded transmissions. I wonder (doubtful) if these stations are IDing? Spy transmissions seems unlikely on HF given the state-of-the-art in satellite commo technology, and even cel phones seems like a more secure method of transmitting code. Any chance of this being CW practice of some sort?

Hello- I have a like new pro 2006 in the box for sale for $265 shipped. I WOULD CONSIDER IT A 9.5 OUT OF 10. I would consider a swap for a like new 2042. Scanner has cell mod. Includes original antenna,manual,box and car cord. Scanner will be extremely clean and well packed. Has the light on-off. I have a perfect 52 feedback on Ebay. If you would like to buy this item it is IMPORTANT for you to leave your name,address and phone number to have first take.Scanner to be shipped Priority Mail insured.

Fredric J. Einstein <feinstei@mw.mediaone.net> writes:

>Get yourself a real address instead of a P.O. Box number and you'll
>never have a problem with U.P.S.

That may be true inside the USA (though I'm sure other people have
UPS horror stories).

But for shipments from the USA to Canada, most Canadians that import
stuff have learned to avoid UPS at any cost. UPS accepts the shipment,
transports it to a UPS warehouse somewhere in Canada, then phones the
recipient and says that the item needs to clear customs. For a
small additional fee, they will do the customs brokering for you and
then deliver the item to its original destination. If you don't want
to use them as the customs broker, I don't know what happens. They
charge this brokerage fee even if there are no duties or taxes on
the item.

In other words, having stated a particular fee for delivering an item
to an address in Canada, and now that they have your item held hostage,
they demand more money.

Reputable couriers like FedEx and DHL include the brokerage charges in
the delivery cost, which is known in advance. If the item is sent
through the mail, Canada post charges a $5 handling fee for customs
(but only if there is actually some money due). I find both of these
approaches honest and reasonable. What UPS does is simply inexcusable.

Never, ever, use UPS for deliveries across the border.

Why do code practice sessions via a car??

The disadvantage of Satellite (ie INMARSAT) or cell phones is that it
IDs the person who is receiving the message. And sat comms and cell
phones can be tracked. HF number broadcasting only exposes the
sender. Which is why the use of ham equipment and mobile ops (that is
how I would do it). I am only telling you what hams in the Elkhart
and Mishawaka area have told me (a one over in South Bend). The toll
road has become a huge radio range with everyone using radios for some
type of illegal business. It has the cops upset.

My condolences to all of those who work in law enforcement and to the family of the officer who was killed. This is a tragic loss. All of us who routinely monitor police traffic realize what a tough job they have. They literally put their lives on the line every day they report for duty.

Hi Folks.

In Germany the military transmissions are not touched in ANY way
by the german equivalent
of the US 'FCC' here called 'BAPT'.
Military is allowed to transmit on EVERY frequency in EVERY mode
and coded in any as
wanted.
And they DO IT. Mostly in a spread-sprectrum mode (even on HF
amateur-radio-bands) so
that it is mostly not be noticed by the regular user of the
freqs.
I think this is the same ALL over the world.... :-((

> I
> wonder (doubtful) if these stations are IDing? Spy transmissions seems unlikely on HF
> given the state-of-the-art in satellite commo technology, and even cel phones seems
> like a more secure method of transmitting code.

Transmitting on freqs available to everybody in a mode everybody
can read, to a
destination, only the sender is knowing is MUCH more secure than
using a trackable
transmission like cell-phone calls or satellite transmissions.
Not to mention that modern
equipment in some parts of the world is very noticeable.
So the only thing you need is the key!! to uncode the
number-transmission and a simple
HF-RX..

The Ultra-right and Aryan Resistance guys have gotten rather
sophisticated and yes while cell phones could/would do the same thing,
it's common knowledge that these devices are insecure for these groups
and others. If communicating to one's partners that are incarcerated the
number station route is the method of choice. Prisoners are allowed
radios but not phones.

In Australia the base is 30.075 to 30.300 in 25 Khz steps.
The handset is 9.7 Mhz higher.

>Mark.

You can hear both ends if you listen to the base, due to crosstalk. The handset
is 9.7 Mhz higher than the base.

Cross-posted to: alt.radio.scanner,rec.radio.scanner

FS: 7 UNITS-PRO-2006 400 CHANNEL SCANNER

WE ARE SELLING 7 UNITS FOR $1500 PLUS SHIPPING.PLEASE TAKE NOTE THAT
WE ARE SELLING THIS AS A BATCH. WE HAVE SOLD INDIVIDUAL UNITS FOR $275
EACH. THIS IS THE LAST OF THE BATCH THAT WE HAVE ACQUIRED FROM A
TELECOMMUNICATIONS COMPANY THAT UPGRADED THEIR SYSTEM.
THE REALISTIC PRO-2006 COVERS A WIDE FREQUENCY RANGE; 25-520 MHZ.,
760-823, 945 MHZ., 851-868, 945 MHZ., 896-1300 MHZ.. THE RECEIVING WAVE
MODES ARE: WIDE FM (TV SOUND, FM BROADCAST), NARROW FM (BUSINESS,
COMMUNICATIONS, HAM RADIO), AM (AIRCRAFT, CB RADIO) THIS ONE HAS THE LIGHTED
LCD, THE TWO-SECOND SCAN DELAY, A MEMORY BACK-UP, A LOCK-OUT FUNCTION, A TEN
CHANNEL STORAGE BANK AS WELL AS MONITOR BANKS. THERE IS ALSO PRIORITY
CHANNEL, DIRECT FREQUENCY SEARCH AND SOUND SQUELCH. IT HAS A BUILT-IN
SPEAKER, EXTENSION SPEAKER PLUG AND TAPE OUT JACK.
THEY DON'T SELL THIS KIND OF SCANNERS IN STORES ANYMORE, SO WHEN
THEY'RE GONE, THEY'RE GONE. THE SCANNER COMES WITH A RUBBER DUCKIE ANTENNA
AND A PIGTAIL WITH THE PROPER POLARITY FOR A 12V POWER SUPPLY FOR MOBILE
USE. IT CAN BE PLUGGED IN AT HOME WITH THE 110V POWER CORD. ANOTHER NICE
FEATURE IS THE LIGHTED DISPLAY AND THE FOLD-UP FEET UNDER THE FRONT TO GIVE
IT THE PROPER ANGLE TO MAKE IT EASY TO SEE.
THE SCANNER IS IN VERY GOOD CONDITION WITH THE REALISTIC LOGO ON
THE LEFT TOP FRONT REMOVED. THE REALISTIC STICKER ON THE BACK HAS ALSO BEEN
CUT OUT BUT THE SERIAL NUMBER STILL REMAINS.(THE REASONING FOR THIS IS THAT
THIS WAS USED COMMERCIALLY AS A PART OF A SYSTEM FOR APPROXIMATELY A YEAR ,
ACCORDING TO OUR SOURCE).ALL FLAWS ARE COSMETIC IN NATURE. THE UNIT HAS BEEN
CHECKED AND IT WORKS GREAT.WE HAVE SOLD CLOSE TO TEN UNITS AND ALL OUR
CUSTOMERS ARE SATISFIED BY THEIR PERFORMANCE.
A COPY OF THE OPERATING MANUAL AND SPEC SHEET DOWNLOADED FROM THE
REALISTIC WEBSITE IS ALSO INCLUDED. OR YOU CAN GO TO THIS WEBSITE AND
DOWNLOAD IT YOURSELF AT -

http://support.tandy.com/support_electronics/8246.htm.

You can view the items on:

http://www.geocities.com/zrecords/scanner1.jpg

http://www.geocities.com/zrecords/scanner2.jpg

Please e-mail us if you have any questions. Because of the long
weekend , any inquiries sent on Sunday or Monday will be replied on Tuesday.

BUYER ASSUMES SHIPPING AND HANDLING CHARGES. CREDIT CARD PAYMENTS
ACCEPTED. CALIFORNIA RESIDENTS PLEASE ADD 8.25% SALES TAX.
INTERNATIONAL ORDERS OK .

THANKS !

Yes. Much more than you do, I suspect. The amateur licence prohibits
the use of a cipher.

>1==> Nothing new about these stations that broadcast cipher groups.

Don't you believe it! The CIA/MI6/Mossad/Cuba and other assorted
spymasters broadcast on HF to their spies abroad, in morse, AM
and SSB. Known as numbers stations or illicit stations. I thought
someone posted to the effect that Amateurs were broadcasting these
numbers - as you say illegal.

Like you, I question why on earth they want to do this in this day
and age. Best answer I got was that the spies were in 'developing
countries' which didn't have satellite or Internet.

I got these from Monitoring Times http://www.grove-ent.com/airshow.html
for the 1999 season but some say 1998 and seem to be different. Have you
varified those frequencies?

I will be going to Redding, CA for their show in September and will be able
to varify most of them.

142.000 Ground support (Comm Cart)
142.625 Ground support (last reported in 1998)
143.600 Ground support
164.900 Ground support
168.900 Ground support (last reported in 1998)
169.400 Ground support (Comm Cart)
170.900 Ground support (Startup/Taxi)
236.450 Usage unknown
238.150 Show center/Delta formation
251.600 Solo aircraft (5-6) air-to-air
256.250 Usage unknown
263.350 Fat Albert (C-130) flight demonstration
263.500 Usage unknown
264.550 Usage unknown (last reported in 1998)
275.350 Diamond aircraft (1-4) air-to-air
286.000 Usage unknown
307.700 Delta formation air-to-ground
345.900 Solo aircraft (5-6) air-to-air

Hi All, I recently ordered some repair parts for my BC200XLT. I need to replace the antenna jack. I also ordered the display lens because it has deep scratches.

My question is this: Has anyone had experience in replacing this lens. Looks like you have to pry the old one off and glue on the new one on. I don't want to mangle this so any advice would be very much appreciated. I don't think Uniden will send me instructions with the part.

Thanks

Robert

:>>
:>>Are you just being deliberately dense, or do you not understand
:>>ciphers?
:
:Yes. Much more than you do, I suspect. The amateur licence prohibits
:the use of a cipher.

The license forbids jamming but hams have done it.

What it looks like is that foreign nationals or those loyalities
to other countries are getting ham licenses as a cover. Then
broadcasting number messages to whomever.

I do not think the right wing is this smart. But even then this is
a bunch of hams guessing as to why we are seeing (hearing
actually) so many number stations on the toll road east of Chicago.

:>1==> Nothing new about these stations that broadcast cipher groups.
:>As most veteran SWLs can tell you, they have been operating for

Would you really be willing to pay the extra costs incurred for them to ship USPS? I doubt it. Assuming there is a Post Office within 10 minutes of the place of business we have about 30 minutes of travel time to and from the Post office including time to find a parking space which is usually in very short supply at a Post Office. I have been shipping a lot of stuff USPS lately and my average wait and time at the counter is in the 20-30 minute range no matter what time of day I go. So now we are up to an hour of someone's time. If they are being paid $9.00 hr then the burdened rate for the store is probably closer to $25.00 or more but let's be conservative. Then you have the mileage for the employee to drive their own car plus the time it will take them to fill out an expense report which they probably wouldn't have to do otherwise. And these are just the hard costs. What about the lost time that employee should be doing something else? How about the extra time to give them petty cash and then do the extra accounting? A not so creative accountant could probably justify an extra $50 in costs. Are you really willing to pay that?

So why was one store willing to do it? Because it is usually in their best interest to not set someone off who cries foul when they don't get their own way. At least you had enough sense to not name the establishment.

The references I have indicated are the PERFECT ONES for the legal
problem for a ham to own a wideband receiver and using it as a spectrum
analyzer (with the SCOPE function) to avoid to radiate/control spurious
(as it is legally required).
The ONLY problem is to KNOW how to read/use them and it seems that you
are not a specialist to do that ... :-)
Unfortunately I have no time to waste to learn you how to use these
radiocommunications rules in a court of justice. Pay some US lawyers,
they will explain that to you ... An article have been written about
that some months ago in the french ham magazine MEGAHERTZ.

Truly a tragic loss in the cqase of the trooper. Fortunately, the perps were also killed in the process. Saved the taxpayers a lot of money on trials, court-appointed lawyers, and the inevitable endless appeals to follow.

5323. Re: N9VKS: Indiana ham arrested for having a scanner/the follow up

Newsgroup: rec.radio.scanner
Date: 2000-09-02 23:18:49 UTC
From: 2121d@gte.net
Message-ID: <39b18858.36759323@news.gte.net>
Source record: 80348
Cross-posted to: rec.radio.amateur.misc,rec.radio.cb,rec.radio.scanner,rec.radio.shortwave,misc.survivalism

I contacted the Elkhart city clerk (the Bremen State Police Post
files all their traffic tickets into Elkhart). What happened was that
Josh Church had to go back to court a second time to show proof
of having a ham license. At that point all charges were dropped.
Case # 20H01-0005-CM-05634, Illegal possession of a police
radio-monitor-scanner, IC 35-44-3-12

As I expected, there was only one appellate case on this section
of law, and it only dealt with the possession of a radar detector
(radar detectors are not assumed to be police radios so case
dismissed). As of yet, no one has raised a case to a higher court
that would define the limits of the law.

What concerns me is that we are seeing an increase of people using
radios, as guns were used before, to commit crimes. Drug runners are
using scanners and CB radios in chase vehicles to let the mules avoid
the cops. So the cops are now stoping anything with an antenna on it.

And it looks like someone in the Chicago area is using their ham
license to cover a spying network. Too many in the Gary-South Bend
-Mishawaka-Elkhart area are hearing mobile ham stations trainsmitting
number type broadcast, in and around the ham bands.

Therefore the cops are looking hard at anyone with a radio. Even
hams. I do not like having to prove that I am a good guy. Even
volunteer fire fighters are now getting the "evil eye". In a society
where no one knows anyone else, everyone is looked at as dangerous.

Too many young cops (average cop only stays on the force for 5 years).
No connections to the community like the old timers had. Too gung ho.

And too many bad guys using my hobbies (guns and radios) to violate
our communites. Somehow we hams need to make our skills available
to the cops to help stop the crooks.

::snip
::
::If he was licensed and was arrested for a scanner violation then
::the only obvious thing that could be illegal is using the information
::obtained over the scanner for ones benefit or for an illegal activity.
:
:There is another possibility. There seems to be a growing number of
:stations that are transmitting "number messages" (string of numbers)
:in and around Chicago. You can hear them on 40 metres and 20 metres
:in the CW band. I passed a guy up on the Indiana Toll Way who

:overloaded my receiver with a CW number broadcast. He looked like he
:was from southern Europe and had ham plates on his car.
:
:If this is true, and you must know that there are a number of state
:troopers in intel units, then the cops may be looking at hams as a
:cover for spying and terrorism commo. Not a great future for us hams.
:
:Hello everyone, I just seen this post about this particular ham being
:arrested for having a police scanner in his automobile. Considering
:that I
:live in Indiana and go under the call of W9SUN which is my FCC
:assigned call
:sign for usage in the amateur service, I would like to make a few
:comments.
:I have read the law from the state of Indiana regarding possession of
:a
:scanner. It is not illegal for an amateur radio operator to possess a
:scanner in the state of Indiana and use it in a mobile setting. The
:key to
:this is that state law says that an amateur operator who has been
:granted a
:license from the Federal Communication Commission can possess one as
:long as
:they are a current FCC licensee. As for myself, I often carry a
:scanner with
:me whereever I go just for the hell of it. Anyone in Indiana can have
:a
:scanner in their house but in a car is a different story. For you to
:be able
:to activate a scanner in a car you must have either approval according
:to
:state law or something like being an Amateur Radio operator. So I
:think what
:this really comes up to is that either he was doing something else
:illegal
:or just a dumbnut officer who didnt know what was going on. Stuff like
:this
:needs to be checked out by the ARRL and the FCC and the locals and
:state
:officers need to be informed of the laws, not just make arrests based
:on
:possession. Its about as silly as being stopped for having an antenna,
:I
:guess that maybe they think people are using police radios. It would
:be that
:a 2 meter antenna would be very close in frequency to the police bands
:here
:locally. Down below I will post the actual law as found in the Indiana
:Code.
:So I think that this is either regarding to other illegal activity or

:just a
:cop that didnt know his head from his rear. Thanks for your comments.
:
:IC 35-44-3-12
: Sec. 12. (a) A person who knowingly or intentionally:
: (1) possesses a police radio;
: (2) transmits over a frequency assigned for police emergency
:purposes; or
: (3) possesses or uses a police radio:
: (A) while committing a crime;
: (B) to further the commission of a crime; or
: (C) to avoid detection by a law enforcement agency;
:commits unlawful use of a police radio, a Class B misdemeanor.
: (b) Subsection (a)(1) and (a)(2) do not apply to:
: (1) a governmental entity;
: (2) a regularly employed law enforcement officer;
: (3) a common carrier of persons for hire whose vehicles are
:used in
:emergency service;
: (4) a public service or utility company whose vehicles are
:used in
:emergency service;
:
:
:---
:----
: (5) a person who has written permission from the chief
:executive
:officer of a law enforcement agency to possess a police radio;
: (6) a person who holds an amateur radio license issued by the
:Federal Communications Commission if the person is not transmitting
:over a
:frequency assigned for police emergency purposes;
: (7) a person who uses a police radio only in the person's
:dwelling
:or place of business;
: (8) a person:
: (A) who is regularly engaged in newsgathering activities;
: (B) who is employed by a newspaper qualified to receive
:legal
:advertisements under IC 5-3-1, a wire service, or a licensed
:commercial or
:public radio or television station; and
: (C) whose name is furnished by his employer to the chief
:executive officer of a law enforcement agency in the county in which
:the
:employer's principal office is located;
: (9) a person engaged in the business of manufacturing or
:selling
:police radios; or

: (10) a person who possesses or uses a police radio during the
:normal
:course of the person's lawful business.
: (c) As used in this section, "police radio" means a radio that is
:capable of sending or receiving signals transmitted on frequencies
:assigned
:by the Federal Communications Commission for police emergency purposes
:and
:that:
: (1) can be installed, maintained, or operated in a vehicle; or
: (2) can be operated while it is being carried by an
:individual.
:The term does not include a radio designed for use only in a dwelling.
:As added by Acts 1977, P.L.342, SEC.1. Amended by P.L.162-1994, SEC.1.

Not to add to the misery, but I saw a news story this morning about a Cincinnati policeman who was dragged to death stopping a 12-year old boy from driving. He shot and killed the boy before succumbing to his own injuries.

:From the Popular Communications September issue:
:
:There's been a lot of talk lately about exempting hams from state
:anti-mobile-monitoring laws, but the debates aside, Josh Church, N9VKS
:of Indiana was ticketed for illegal possession of a police scanner.
:(No, the words "police scanner" aren't ours, but rather the Hoosier
:States'). If you've got a tendency to boil over easily, better not
:read this month's "Tuning In" on page 4, because Indiana bureaucrats
:don't know a radio from a box of Dole bananas.

:
:I have tried to talk to Mr. Church to get more details of the arrest.
:I have also spoke with the 1st Sgt of the PAO division of the Indiana
:State Police. The best I can get from the cops is that the ISP
:assumes that anyone with a radio is spying on them. No recognition
:for the public service that hams give (the state's emerency management
:agency disargees), no recognition that banning scanners is going to
:cause cops to have to buy units from Motorola for nearly $4000 to do
:the same function of inter agency monitoring.
:
:Just a fear that the public is out of control.
:
:BTW, I did check. This section of law has only had two appellate
:cases. And nothing that deals with hams. I guess hams are going to
:have to give more money to the legislature to buy exemptions.

:>What concerns me is that we are seeing an increase of people using
:>radios, as guns were used before, to commit crimes. Drug runners are
:>using scanners and CB radios in chase vehicles to let the mules avoid
:>the cops.
:
:Bull. You can't offer ANY proof of that.

That is what the cops are saying. Go ask Trooper Brant Clam, the PAO
of the Bremen Post. Or talk to the Elkhart city clerk. That is what
they are arresting people for. Using CBs and scanners to avoid
detection by the police. Look at this thread. Several people have
reported being stopped by the cops for having radios, all because the
drug runners are using them.

:>And it looks like someone in the Chicago area is using their ham
:>license to cover a spying network. Too many in the Gary-South Bend
:>-Mishawaka-Elkhart area are hearing mobile ham stations trainsmitting
:>number type broadcast, in and around the ham bands.
:
:And BECAUSE it's in 'or near' the Ham bands,
:you assume it's somone WITH a Ham license??

No, because I personally saw a guy with ham plates
blow by me, jamming the front end of my receiver with
a number type mesage in CW on the lower end of 20.
Others upstate are reporting the same thing.

:>Therefore the cops are looking hard at anyone with a radio.
:
:The Cops wouldn't know a numbers station if it was transmitting
:in their car!

There are a number of ISP troopers who are also military intelligence
analysts in the Guard or the Reserves. I would expect that they have
some exposure to signal intelligence.

:And they have LITTLE authority to do anything about it even if
:they find such a station.

They can gun you down if you mouth off. It is called resisting
arrest.

>way. At least you had enough sense to not name the establishment.
>
I didn't "cry foul" with them, nor did I do it here.....simply
relating an experience, somewhat "tongue in cheek" to stimulate some
discussion. I think I have succeeded, despite taking a few hits from
the newsgroup police.

Your example makes the point, and of course I am not going to pay for
employees time at the post office, lines, etc. I don't do it with
Grove, where I buy alot of stuff, and they always send it to me USPS,
Priority, to my PO Box, no questions asked. I was willing to pay ALL
USPS costs, and reasonable handling charges. They declined.

Like I said, business is good.

Actually, one of the "perps" was the 15 year old nephew of the driver, who
had gone with his uncle to help him jump-start a car, don't know if it was
the one they were in or another one.

Internet tracing can be foiled, scrambled, and got around very very easily.

I won't go into details about how, because the last thing we need is children, and those who behave like children, posting under assumed identities.

Just my two cents.

-SSB

On or about Sat, 02 Sep 2000 22:57:08 GMT, 2121d@gte.net (N9NWO), using the forum rec.radio.cb did say:

:
:Satellite and the internet allows the tracing of who the message
:is sent to. HF does not. The receiver is totally left out of the
:picture. At best, the transmitter can be traced which is why these
:folks go mobile with ham licenses.

Hello all...

Well, I've said it once, and I'll say it again....

Recent experience has shown a need to begin recruiting new members for the Radio Newsgroup Police.

Unfortunatley, these positions do not come with salary or benefits. You will however, have the satisifaction in knowing that your efforts will keep these groups the intelligent, open and free exchange of ideas we currently enjoy.

Requirements :

1. Must be able READ English at a 3rd grade level . (Some exceptions have been made for recruits in the past).

2. Must be able to write at a 3rd grade level . (ditto)

3. Must be pompous.

4. Must have the ability to read someone's post and determine whether the contents amount to "Whining".

5. Must be able to issue "points" to posters for their threads.

6. Must be able to identify "Trolls", and dispatch same at all costs.

Your duties will include scanning the groups for triviality, bullshit, mediocrity, and general poor taste. All based on the standards set by the Newsgroup Police, of course.

If interested, please submit your application publicly for review. Acceptance to be decided by the current Newsgroup Police membership, anonymous as they always are......

Excuse me for pointing this out, but....you're entire argument is
based on the inconvenience and cost of going to the Post Office to
ship.

This argument is rendered invalid in light of the fact that USPS picks up. At no charge. There are no extra costs, and no inconvenience.

Considering that their track record is better that UPS by an order of magnitude and their rates are lower by almost half, your position is not tenable. The business in question could have easily shipped by USPS and pocketed a profit on the deal over UPS. With no loss of convenience, or expended effort.

.......Not too mention goodwill, and the future business I would have
given this dealer.

Thanks for pointing this out, Peter.

I'm just about out of breath with this!

Source record: 80366

Here's from www.arrl.org - one of the leading ham radio organizations in the US:

A FUN Hobby...

Ham radio operators use two-way radio stations from their homes, cars, boats and outdoors to make hundreds of friends around town and around the world. They communicate with each other using voice, computers, and Morse code. Some hams bounce their signals off the upper regions of the atmosphere, so they can talk with hams on the other side of the world. Other hams use satellites. Many use hand-held radios that fit in their pockets.

Hams exchange pictures of each other using television. Some also like to work on electronic circuits, building their own radios and antennas. A few pioneers in Amateur Radio have even contributed to advances in technology that we all enjoy today. There are even ham-astronauts who take radios with them on space shuttle missions and thrill thousands of hams on earth with a call from space!

With a SERIOUS Side...

Using even the simplest of radio setups and antennas, amateurs communicate with each other for fun, during emergencies, and even in contests. They handle messages for police and other public service organizations during all kinds of emergencies including:

Hurricanes
Earthquakes
Tornadoes and floods
Motorist accidents
Fires and chemical spills
Search and rescues

Check out their Frequently asked questions page at
http://www.arrl.org/ead/hamfaq.html

As I noted in a private e-mail, the amateur bands probably aren't too prone to official monitoring for content. In most cases, CW acts as a cipher even for amateurs, if sent at sufficient speed. It would be good cover. A mobile will serve to confuse RDF monitoring and the band mentioned (14 mHz) is open world-wide almost all day and night.

When you are talking about hearing one side of the conversion you are hearing
the hand set most likly a 49.Mhz freq try these for 2 way conversion the
base freq's
46.61 46.63 46.67 46.71 46.73 46.77 46.83 46.87 46.93 46.97

49.Mhz are used for baby monitors and cordless phone hand sets

here are the new freq's for newer cordless phones

43.72 43.74 43.82 43.84 43.92 43.96 44.12 44.16 44.18 44.20
44.32 44.36 44.40 44.46 44.48

Good luck

It is much more then talking to far away places. Ham's are helpers in a time of need, usually the first to establish communications in disaster struck areas. They are inventers of new technology and communications methods. They offer communications assistance with public activities and public services. And most I've met are just good people. Look around your area for a local club or someone already involved in Ham radio to see for yourself, most will be happy to explain what Ham radio is all about.

Please people...those of us here that have experience with both sides of
the dope trade are just plain laughing right now.

Domestic drug numbers stations based in Indiana
and using mobiles on CW???

Hams being arrested or detained???

Drug runners in and around the ham bands???

And the cops in Indiana are stupid enough to believe it???

First off.....
The Indiana cops probably turned the musings of a tweaker (meth user)
into a pretty tall tale, after finding a CB in his truck after a search
and arrest.

Second...
NO drug cartel worth a 10 spot of crack is going to use CW (smoke
signals) to move the product around in the states. If they are stupid
enough to use a ham radio then they must really be amateur.

Third...
Ham radio operators make crappy drug runners. Do I really have to
qualify that.

Fourth...
Felix Areallano and his brother can afford to buy encrypted astros from
Motorola S.A de C.V. with no questions asked if needed.

> :>And it looks like someone in the Chicago area is using their ham
> :>license to cover a spying network. Too many in the Gary-South Bend

Sunspots playing tricks.

> I personally saw a guy with ham plates
> blow by me, jamming the front end of my receiver with
> a number type mesage in CW on the lower end of 20.
> Others upstate are reporting the same thing.

Or just another idiot jammer...
>
> :>Therefore the cops are looking hard at anyone with a radio.

At the most the cops are dealing with a major meth problem in the
midwest and some of the tweakers have been arrested and in possession of
some box with a mic attached...the word spread among the patrol ranks
that "the tweakers were on CB"(big surpass eh).

When the DEA and FCC start pulling over cars with antennas then you
MIGHT have something to really worry about.

There are plenty other reasons why this is nothing more than a fantasy
in it's current form.

I'm not saying that radios are NOT used...but any decent smuggler knows
the proper use of radio equipment and freq spectrum for any give
task.

Remember they have a lot more money and resources than the Indiana cops.
Except for the tweakers...they are poor and stupid.

If you put a "tweakers suck" bumper sticker on you car, they would most
likely leave you alone.

> :The Cops wouldn't know a numbers station if it was transmitting
> :in their car!

Yah Huh....they have a special doggie for that.

> There are a number of ISP troopers who are also military intelligence
> analysts in the Guard or the Reserves. I would expect that they have
> some exposure to signal intelligence.

They can probably tune in a signal and listen...but the military is not
really trained real well in drug interdiction, let alone domestic drug
interdiction. The fact the police have those people on staff does little
good if the PD does not provide monitoring hours and a shitload of
equipment.
>
> :And they have LITTLE authority to do anything about it even if

Thanks for the quick replies, fellows! I have one more small question for ya. Say I'm a ham and I feel like talking to someone. Do I just fire up my radio and find conversation to join? Thanks again!

Bonnie the CHP dispatcher in L.A. (and one of the voices heard on "chips") told me this one...

"We recieved a B.O.L. from the L.A.P.D. about an armed robbery. None of the dispatchers wanted to read the description over the air, so I did. The description included the bumper sticker on the car.
"I LUV MUFFDIVING"

I don't know if they ever found the car."

Well, KSC is getting ready to launch the space shuttle Atlantis on
Sept. 8 for an 11 day mission to the ISS.

Anybody know any frequencies they're using??

Last time I saw a landing I noticed someone using a scanner in the
800mhz band. I was unable to find out the exact freqs though.

Thanks for any info,

-=Tom=-

Adam
They are all drug dealers based in Indiana. It's a big friggin dope ring
that uses ham radio as a primary means of contact. If you join this gang
(they say club) you will get pulled over by the fuzz and twisted up into
a total bummer man.

Yes, it is that easy.
Just go to radio shack and ask for a ham radio or even two since you
will want to talk to a friend.
Next you look in the phone book under motorola service center and get
them to install the unit and antenna. Motorola will do it right and real
cheap.

When it's installed you just turn it on and pick a frequency that is
open...any one will do since they all sound the same. have your buddy
set the same frequency and push the button on nthe mic to talk.

Some hams have call letters,but if you use the radio for personal and
small business use(under $50.000 a year) you don't need call letters.

If they get pissed at you and say shit like "i'm gonna track you down"
don't worry ...just kick their asses...it's pretty easy.

If you want to know how to talk real far on repeaters email me and I
will give you some tips on tone surfing.
what is really cool is some people put dial tones on the radio so you
can make free phonecalls.

My my - a foul mouth.
But to answer your query - no one
appointed me "GOD".

It is just significant that Elliot Ness -
Champion of truth, decency and the American way,
defender of all goodness and mercy -
upholder of the prohibition on alcohol in the 1920s
and whose sole claim to faim was in being someone
who knows better than the average citizen -
Should die in the depth of the alcohol that
he so selfrightesly fought to prohibit citizens
from obtaining.

Eliot was also a principal purpetuator of the 1934
National Firearms Act - an act which has been used
to deny citizens other civil rights.

Get the point? (Or are you just stupid?)

There are several ways, use radios like the ICOM R-2 or Radio Shacks Pro 92
or 2067. The Radio Shack radio's will automaticly show the PLs. The other
way is to use an Optoelectronics meter or their OPTOCOM.
Good Luck

Hi Tom!

A search using "shuttle frequencies" ought to turn up lots of links for
you--here's just one for a listing at the Grove Enterprises site:
http://www.grove-ent.com/nasa.html

Hope this helps, and that you get lucky!

Here's the REAL answer, Adam: Yes. Usually all you have to do is get on your favorite local repeater and give out your callsign, like "N6URU, monitoring." Often as not, even if you're a new ham, someone will come back and say hello/where are you/what's your name etc. Once you get to recognize each other by callsign and name, conversations just spring up. Many places, either ham clubs or just groups of hams will have unofficial get-togethers over coffee or lunch. As someone mentioned, find a local ham club and go to one of their meetings...newcomers are always welcome, and don't worry if a lot of the lingo is kinda strange at first: all hobbies seem to be that way.

One thing I like about it is that you can be as involved as you choose...I mainly just like to chat with my buddies; I happen to also be a train fan, and there are lots of hams/trainfans that use their ham radios to report unusual trains, locations & such, or to coordinate for good photo locations. I'm not interested much in the technical stuff, so I just do the things I like.

Harry / N6URU

I am sending this to you personally and I hope you don't mind. As a former cop I can say N9NWO is correct. Recently on I-70 on the west side of Indiana, state troopers have busted a few major narc trucks. In two cases the back-up officers noticed one car sitting on the side of the road. Both had what they call a K-40 (I think) whip antennas and in both these incidents the back-up officer called into dispatch to have these cars checked out. By the time a third officer arrived where these cars where pulled off on the shoulder, they were gone. Something else to ponder: One of the trucks stopped contained about 1500 lbs. of coke worth about $18 million. Now it's not that hard to imagine some sort of _insurance_ would be included with that amount of money involved.

Let's see. Some one rides around listening to a scanner.
Cops don't like it so they, what, steal (they call it confiscate,
sounds better to them) the scanner, or they arrest him (for what?).
If there is no case there is no case and there is no law
that would stand up in court against listening to a radio,
any kind of a radio. If they believe he's involved with

drugs, then they must prove it (or bribe an informer).

Some states had laws against CBs in the 1960's. Just
took 'em right out of the car and smashed on the road. Same
with radar detectors. And now they're starting to pull the
same thing with Hams.

The first thing to understand is that if the cops really thought
drugs were involved then they could take the license number, put
a tail on him and he will eventually lead them to witness
something illegal. But to pull people over and take radios
or charge them with some "offense" means that they have
resurrected the old policy. They're after the Hams because
they are easy pickings and represent the worst of the "evil"
public, they can communicate.

LEOs are first and foremost, elitists. They like the idea of
being different and able to do things and know things
that the average person does not. They also crave power,
the gun and the shield. They also like knowing the badness
of the public because their original motivation to become
a cop was to eradicate the bad guys. Soon they begin believing
that they are "the thin blue line", the only ones on the side
of good and that the bad guys are the civilians.

Hams are another group of elitists. They like the idea that
they are privileged characters just like the cops. But they
don't have the same amount of power as the LEOs. Since drugs
have now been linked with radios, radios are targets and
privileged radios are the easiest. They get points for this
stuff you know and the Feds pay each jurisdiction money for
Federal "violations".

Since there is no real law against radios, the state/local
policy could be changed by the Governor or AJ in a matter
of hours. They won't because of the political points and the
Federal payoff.

Then there would be a bunch of dead cops, if that was the
case. What's the use of insurance, if they are not going to
use it? To verify the cops scored 18 million?

Just to clarify the story: The OKC-PD officer, (Officer Jeffery D.
Rominger), while responding to a request for additional officers on a
traffic stop by a OHP unit on I-40, apparently attempted to pull over a
Firebird for reasons that may never be known. The Firebird was driven by a
41 year old subject (Patrick Kiplinger), who had a lengthy felony record
spanning 22 years, including jail escape, burglary, kidnapping and ADW. In
the car with Kiplinger was his 15 year old nephew, who had no previous
criminal history. After dodging back and forth on city streets, Kiplinger
entered I-40 on an exit ramp, traveling eastbound in the westbound lanes.
Rominger followed with lights and siren on, requesting that westbound
traffic be shut down. Less than 30 seconds later, Kiplinger clipped a
westbound semi, bringing his car to a halt. A westbound OHP trooper
(Trooper Matthew S. Evans), who was responding to the OHP traffic stop and
had no knowledge of the pursuit, struck the Firebird and went airborne,
landing on top of the OKC-PD unit. One of the vehicles exploded on impact
and caught the other two on fire. Both occupants of the Firebird were
thrown from the car on impact and died at the scene. Trooper Evans died at
the scene. Officer Rominger died a short time later at the hospital. There
is no evidence at this time to suggest that the nephew was involved in any
criminal activity. The uncle may have had further criminal charges pending

at the time, the paperwork had apparently been presented by city detectives to the D.A.

A fund has been started for Trooper Evans' family by the Oklahoma Dept. of Public Safety. Information on that should be at the website listed (KFOR-TV) or email me and I'll get the details

Latest word I got via the ARRL website (awhile back) was that the SAREX
(Shuttle Amateur Radio EXperiment) (Hope I got that right!) has been
suspended and no further Amateur Radio transmissions will be made until the
Int. Space Station is activated. However, some ham clubs do rebroadcast
shuttle transmissions as a public service. Sorry I can't help with direct
reception info, might try the Monitoring Times website.

Well, if they wouldn't use humans, then maybe the insurance would work. No one knows who these guys are supposed to kill. Maybe they are just supposed to kill other drug runners. The only thing I can say is that it would be somewhat hard to get in a gun battle from your car without practice. I mean you have cars doing 70+ and your going to pull up behind a cop who is already alert that there could be a chase car and start shooting?

> To verify the cops scored 18 million?

Sorry, www.starnews.com ran the story, but their search engine is not bringing it up.

>
> Guess the spotters didn't work very well, did they??

They are not spotters, they are cars that stay behind. Well I guess they could spot cars coming up the interstate, but they stay a mile behind. The reason I heard was that there were originally used so that the occupants in the drug car would not give hugh sentences because no guns would be found in the drug car. Who knows the truth. I bet drugs don't even exist and the pigs have used sugar in every single photo of confiscated cocaine!!! Yea that has to be it. Just like NASA made up going to the moon to get more funding.

> Drug dealers would have to be totally stupid to use easily visible spotters
> and easily monitored freqs for the spotters.

They are only 'easily visible' because they pull off the side of the road. Also I have heard NOTHING about using ham radios, they use CBs. They stay on channels that are not normally used. I for one see no reason to lie, I mean our state cops said there are chase cars and your opinion is that they make it up for money could be true, but when your state is not going to give you more money then why keep making it up? Let me guess, you think at some point some off-duty cops will shoot one of their own to make this look like a chase car? Then the cops will get their money. Yea I bet that is it.

> Cops will say ANYTHING that helps them get extra funds, and I say that
> having several good friends who ARE cops.

Yes, but they are not getting funds. So when some cop gets shot by a chase car I am going to demand an internal investigation because it's probably other cops shooting their co-workers cause they need and want that money so bad. $18 million and you people act like this is total fucking bogus and no one would

ever do this. Well if I fucking had just a few hundred dollars I would be packing. The thing is I would be defending my life if someone tried to take my money, no fear of jail (as long as the gun grabbers don't get their nazi gun laws passed). These guys who are in these chase cars (and your right, it may be a total lie) have to take into account that they will murder a cop. It would be totally premeditated so that means death penalty here in Indiana.

With fully automatics vs. his 9mm pea shooter? Yeah.
Especially if it means losing 18 million dollars of someone
else's drugs/money.

Well this is why I am getting out of the job. I don't like the attitude you describe and your right, it is there and it's getting worse. I cannot believe it but some of my co-workers favor the assault weapons ban. However I also disagree. I do see myself as the thin blue line. I mean why the fuck don't more people take care of things themselves. Without us, people in major cities wouldn't know what to do. Everyone in m.s. wouldn't need police. However I often wonder when I get calls of a man beating off in traffic why there are no civilians around to help enforce the law? I mean in some areas (mostly rural) people would come out of their houses and take care of the problem. I guess that's why I would much rather work in a rural county than a city, however the money is usually in city police work. Why? Because most citizens are sheeple and don't want to take care of things themselves. I understand it's my job to take care of problems, but when citizens keep brushing everything off they freak when the cops talk blue flu, etc. Damn I don't know what half the people in Indy would do if the cops walked off the job. I guess for some people we are that blue line, for others were are there for assistance, but they know their protection lies in their own hands.

Unforunately, I would agree with the dealer (having an idea who it is)... I recently tried to ship a pacakge to a customer that purchased a scanner from me and he wanted it sent the the USPS! After 3 trips to the post office I told the custoner to take it UPS or the sale was off! The USPS is becoming a bunch of flaming idiots and they wonder why they are losing thier rears, even though all the big shooters now get "Large Bonuses" every year. Lots of new rules in place at the post office and they are "STUPID & CLUELESS".. My wife works for the post office and she even cehcked at her office and no one understands the rules and what they mean, each office and employee seems to have different opinions. SHIP UPS!!!!

This is a clone of the BC760XLT. Unit comes with the indoor antenna, auto wiring and mounting bracket. The power connector on the scanner is a little flakey and sometimes you need to play with it to get power but aside from that the unit works fine.

It doesn't matter. "dead cop" = "right cop", which is to say that no
matter how the KIA went down, the cop becomes an instant hero/martyr
and the maudlin wailing and flagwaving begins.

I've never understood cop-haters or cop-worshipers. Cops are people,
prone to the same kinds of productive and non-productive behaviors.
Why mythologize them one way or another?

Adam,

It looks like you have gotten some real good information, and we hope
that you decide to join the ranks of HAMS.

There will however be some groups in HAM radio that cling
to elitist thinking, and they are quick to call people to
task for not conforming with what they think.

Ignore them, they are the lunatic fringe of HAM radio.

Not mythologizeing (is that even a word?) them, just showing them the
respect they've earned. There are very few "bad" cops killed in the line of
duty. Most a good people, with families, mortgages, etc., all the things
most people have in their life. Yet they willingly take on a job that
subjects them to the contempt and scorn, if not outright hatred of their
fellow citizens, knowing it is possible that they might not come home from
the day's (or night's) job. You've got to really love your work to put up
with the hours, the abuse, and the low pay. When an officer is killed in
the line of duty, don't you think it's proper that we show them some of the
respect we denied them when they were alive. It won't help them, but it
might make their mothers, fathers, wives, husbands, sons or daughters feel
that there was some good reason for what happened, that their death wasn't
meaningless.
Is it so much to ask, a little respect?

UPS stands for "United Pilfer Service". UPS had long had a "we don't give a shit" attitude. They are often late, frequently damage shipments and act like they couldn't care less when it comes to customer service and complaints. Not only that, it takes least a month to get CODs paid. One time it took over 3 months to get my COD money from UPS.

I have never had a problem with USPS Priority. Given the choice, I'll take USPS or FedEx. Everyone I deal with at our post office is knowlegeable about shipping, I ship USPS at least once a week.

So, have you pissed on a UPS truck today?

First, get the registered version of Bruce Pope's software. Then Edit the bandplan to make the two ranges with the "flag" field of "40h" only .1 Mhz wide or so. That should do it.

I was referring to transmitting on the CB bands. I doubt that someone using a ham radio would bother dialing the power back to the CB-legal level. The fact that most ham HF sets put out 100 watts and is not limited to transmiting only on the 40 specific "channels" or frequencies reserved for the CB service is probably the reason they're using them as CBs to start with. Either way, it is illegal to transmit on a CB frequency with non-type-approved equipment, and illegal to transmit on frequencies not assigned to the amateur service with an amateur-approved radio.

:if the cops walked off the job. I guess for some people we are that blue line, for
:others were are there for assistance, but they know their protection lies in their own
:hands.

I live in West Lafayette. We have guidance counselers here that push
the idea that the military is for losers because "our children are
going to college, let the losers serve". The left wing pushed the
idea in the '80s that if the educated elite just paid their taxes then
the government would raise their kids (ie the teachers, look at the
mess schools are now because parents do not want to get involved),
that the poor and the working class could be bribed to be the military
and the police, that the poor could be made to "disappear". That
taxes equal caring (we now have many elite who want the government
to take care of their parents so they will not have to be "involved").

Look at what the Indianapolis Star published on 911 call abuse. One
guy called to have the police come down and help carry boxes to his
car!! The elite feel that the police are their servants. Yet they
also are afraid of the police and military because they see them as
lower class people who know more about guns and such. It might be
getting thru that if you hand off personal responsibility to another
then that person might someday rule you.

And the military and police are superior to most civilians. Smarter, better physically fit, more ethical (look at how unethical most liberals are).

Hey, I'm not a ham,but I grew up in Hooterville just down the turnpike from Pottersville. I have a GE superradio that gets interference from my ham friend.

Hams are my heros! They get to play walkie talkies all the time and pretend to hang with "da man".

My friend said if I was a real ham I could have a yellow police light and a sign that allowed me to follow tornados. If I get sucked into a tornado and die I will become a ham hero.

I'm learning code...I practice on my moms stapler.

Please,please pick me for your new club. PARG in Oregon refused my application.

You need to use a shielded lead to do this, it is like tiny coax cable. put connectors on the ends, hooking the center conductor to the center lead, and the shell to the braid... this will get rid of the hum

Jon,

The UPS drivers themselves admit that the people working in the
distribution centers are borderline neanderthals....!

The workers at the USPS are rocket scientists next to that gang.

>have the article or any known good freqs?

I couldn't give you specific freqs, but monitor between 30 and 74 mhz. Most military radios operate there. They also use HT's that transmit in the 130 - 140 mhz range. A sure bet for MP frequencies in the field is 39.75. Just one thing - any real military unit changes their frequencies every day, according to their SOI, so you'll probably have to scan each day until you find them. Hope that helps a little!

Again, interesting... Of the 60-70 shipments I mentioned above, about half had additional insurance purchased, some have gone Express Mail, a few were oversize. I've never had anyone question the tape I use or anything about the contents of the box or packaging methods. In fact, I sent a $400 R/C engine out on Friday, Priority Mail, insured, with delivery confirmation. The package was shipped in a used box with plain old 3M clear packaging tape.

I don't doubt your experiences at all, I may have excellent Postal Service employees in my area. I usually mail ALL of my packages from one of three small outlets, here in Connectict. By small I mean that they have about 35-50 PO boxes, three parking spaces, and one clerk. My favorite is an office known as Rockfall, CT, that shares a small wooden building with a deli. The USPS will mail you any supplies you may need, for FREE, via http://www.usps.gov . I usually show up with all the forms completed and Priority Mail stickers, tape, and labels already on the package, so the clerk just collects my money and stamps the confirmation and insurance forms.

Thanks,
Barry

I don't know where there is such a list but I do know from my consulting work that MOST African, Asian, eastern European countries do not permit ANY scanners. Some of them treat such things as espionage devices and have severe criminal penalties.

Even the Bahamas bans scanners and unlicensed radios although they do not actively look for them or even confiscate them unless the holder is suspicious. (This includes FRS radios)

Rats,
How did you find out that all "us" pizza delivery guys constantly check this NG?!?
Yes it's true, when we are not delivering pizzas, we were all monitoring our scanners to find out where the competition is delivering to. We also like to listen in on our competitor's cordless phone whenever they are taking an order. This helps us covertly learn which toppings are "hot" this week.
However, as far as which frequencies "do we use".....Hah! Good luck pal. We now all use full DES digital encryption.
You really think we would openly transmit TOP SECRET pizza messages that anyone with a $99.00 Radio Shack scanner could intercept. Pahleese. I'm sorry, the days of being able to hear "in the clear" pizza transmissions are long over.

If you have a frequency counter, I would think it might be fun to take a long stroll around the ship to see what it comes up with.

One dispatcher in a nearby town likes to call the drug dealers "unlicensed pharmacists".

Also, on our statewide SPEN network, occasionally some dispatcher will broadcast the theme song from the TV show "COPS", or various departments will trade one-liners with each other over the network.

Are you sure you aren't hearing a PL (AKA CTCSS) tone or DCS on the
signal? The audio on your scanner probably filters out such things.
But a tape recorder would probably pick up such things.

Years ago I put an IMTS phone in a Step Van for a guy who had a pizza oven in the back. He'd take an order, make the pizza and bake it on the way to the delivery location. This was in a small town in Indiana, lots of rural deliveries. He's no doubt using cellular now.

Not sure about the 300 xlt but for my 200 xlt I just pop the battery pack apart
and replace the cells with 2x 3.6V cordless phone pattery packs in series..As I
recall they were a Panasonic brand but just take your existing pack into Radio
Shack and you'll find them (far better perfdormance than the uniden oem BTW)
I think I found mine at www.digikey.com part #P072-ND at $7.99 apiece

In the days before SINCGARS that was somewhat true -- for units in
combat/combat-support related operations (including exercises) that use
the 30-88MHz 'Fox-Mike' band.

But there's a lot of fixed-channel stuff out there too.

If I'm not mistaken, FRS radios have a max. transmitt output of .5 watts, whereas CB radios have an typical output of 5 watts (or more ?). Should be less "crowded" with the smaller power output.

You got it exactly right! Those same guys must also be the ones that
say....."Knock it off North Bergen."
Funny to read that someone else in here picked up on that. :-)
BTW, the dispatcher that used to always make the drug dealer cracks is
"Larry" from Newark PD.

Take Care,
Phil

5437. Messed up scanner or phone?

Newsgroup: rec.radio.scanner
Date: 2000-09-05 20:42:20 UTC
From: StickyRiceBalls <nospam@nospam.not>
Message-ID: <SUct5.95$PY1.39566@nnrp1.sbc.net>
Source record: 80266

My nephew brought me a little problem yesterday. Among other things, he occasionally listens to cordless phone freqs on his two week old BC-895. The other night he said the scanner picked up the same conversation on multiple frequencies - 44.400, 46.830, 46.870, 46.970, and 46.930.

He could scan around and hear different conversations on different channels like always (one conversation to a frequency), but this particular conversation kept showing up on five different frequencies until the people hung up. He says it's never happend before or sense... ?

He wants to know if he got a bad scanner or if this person was using a phone that transmits on more than one frequency at a time? Not having an interest in cordless phone conversations (or the technology involved), I don't know the answer.

Any help?

> It could be - how would I know?

I don't see why there'd be a difference. Presumably he's going out of the scanner's earphone jack into the tape recorder. Inside the scanner the audio from the volume control feeds both the headphone amp and the speaker amp - maybe the same amp. There's no reason why CTCSS tones would get out through one path and not the other. If they're inaudible in the scanner speaker they'd also be inaudible after being recorded and played back.

By the way, Frank, is the tape recorder mono or stereo? And what kind of jack are you going into on the tape recorder? If it's a microphone jack you'll have problems from overload. You want a "line in" jack. If the recorder doesn't have one, R/S has a patch cord with a built-in attenuator. If it's a STEREO line in jack, remember that the scanner earphone jack is mono - if you use a multimedia patch cable (1/8" stereo phone plugs on each end) one channel will be open and might pick up a lot of hum; you want a mono-plug-to-stereo-jack adapter at the scanner end in this case.

Greetings,

I am in the SF bay area and just bought one of these units on sale from Fry's (yeah, I know Fry's generally sucks), and I notice that around 160.320, the unit seems to pick up some sort of buzzing noise, especially outdoors, much like an AM radio might pick up around main electrical transmission lines. Anybody around here have a similar symptom? Any observations posted would be appreciated.

Most (!) everyone abides by the self-policing rule of placing "FA" or "F/A" in the front of ebay advertisements.
This identifies the real nature of the 'for sale' -- it also enables a lot of us (certainly me) to filter any message that has FA or F/A in it so we never see it.

It is obvious that there are many that don't filter FA messages so you still have a generous audience while accommodating the rest of the group at the same time. You will just avoid annoying those that don't want to see ebay ads (nor ever buy anything from ebay) -- so everyone is a winner and everyone is happy.

good luck on your auction, I am sure you will realize a great return.
please help us maintain the decorum.

cheers

If you can't find the source of the noise, or isolate it, then it's probably a birdie. A birdie is an internal generated noise from the scanners own circuit. All scanners have birdies, some more than others, and not always on the same frequency. Unless it falls on top of an actual frequency you're trying to monitor, I wouldn't worry about it.

We had one here in Salt Lake City last Sat night that was pretty
funny. Fire & Rescue dispatch comes on with a call for a "young
female with a condom stuck in her vagina and requests a female
EMT". The dispatchers were laughing so much in the background
the responding unit had to request a repeat a couple of times to
get the info correct.

A lot of the different agencies use the 800 mhz bands these days. If you purchase a scanner without that frequency then you won't be able to listen to those agencies.

Uniden makes nice scanners. The best place to find out if you need 800mhz coverage is to check some frequency guides to see if 800 mhz is used in your area.

Try http://www.strongsignals.net for lots and lots of info on scanning...

Used to be a Deputy in Monroe County Sheriff's Dep't. that was the "Phantom 4 barrel", on the 10-to-6 shift, on a quiet night, the mike would open up and the sound of the big ol' carbureted Chevy would bellow across the band. Of course, when unit ID's started showing up on the screen, and fuel injection arrived, Ol' Tom put him into retirement. (Ooops, did I say that out loud?)

In Livingston County, there generally is an all points for an attempted burglar or possible DUI every year on 12/25, for an elderly gentleman operating make and model unknown, chasing a small herd of deer. He's never been caught, either!!!

Things have become more professional as of late. I don't hear the rowdiness
that prevailed just a month ago. Do you think the FCC sent out a bulletin
to the NJ departments telling them to shape up?

I seem to recall that before the mainland Chinese took over Hong Kong,
scanners were illegal in HK. However, one had no trouble finding scanners
to buy all along Nathan Road!

No, it is probably like in many households, they have multiple cordless phones and each one is working on a different frequency. If more than one person is in on the conversation, that could amount to three frequencies being tied up with the same conversation.

Not sure if this will help, but here goes. Scroll through the states until
you find your state. Now press one of the service buttons - Police, Fire,
or Medical. The scanner is preprogrammed with info regarding the services
in your state as of the manufacture date of the scanner (well, a bit
before that I suppose).

Funny! I used to do that myself! I was a dispatcher for MANY years, first in Fayette County, IN and then Rock County, WI...Every Christmas eve back in Indiana we'd put out a BOLO for ol' St. Nick in much the same way...Another funny one...(although admittedly not AS funny now that I work on the road...) I heard a story that originated in Texas...apparently a 10-50 involving a semi carrying a load of hogs to market. First officer arrives on scene and advises dispatch that there is a 'dead pig in the middle of the road...' Story has it, she immediately answered with a query in a deadpan voice "10-4, can you advise which officer is down?" Funny Stuff!

Reuben:

No currently manufactured scanner radio sold in the U.S., to the general public, can be modified for cellular. This would include all trunktracking scanners.

You hold it down for a few seconds, until you hear a beep, and see RMT on the LCD screen. You enable RMT mode when you have an interface cable, and software, for PC control.

Some radios are rather obvious and are considered illegal from the get-go. What are commonly called "export" radios are pretty easy to ID; Rangers, Galaxies, Tristars, Connexes, certain Presidents etc. If a radio-savvy cop (I know 2 that are hams) spots one of these brand-names on the faceplate of your radio, he would probably have probable cause. Same thing goes if you have a big finned box sitting on your tranny hump that says "Texas Star" on the front of it. Have never heard of a cop actually enforcing FCC laws, and it might not even be within their jurisdiction, but it wouldn't surprise me if they did have the legal authority.

I have on occasion 'won' items on eBay, and had the misfortune to have the items sent to Canada by UPS. On one package form California, the cost including shipping to me was about 40 dollars. I sent the money order. When the package got here, UPS charged me ANOTHER $38.00 for having to remit $1.26 to the government for 'tariff' fees. On another occasion, I 'won' a $10.00 set of machinist's guages. I sent the $10 and $6 shipping. I was at work when the truck came to the house, so my unknowing wife paid ANOTHER $25 to the truck driver for a 'brokerage' charge. Whatever savings I had made by my 'shrewd auctioneering' was lost, and then some. After that episode, I asked all shippers Not to use UPS for anything sent to me, as I will send it back. I hate UPS and I discourage people from using them every chance I get. They act like thieves and do not deserve your business.

According to the FCC docs that were posted on the BC-780 listserv, no it's not modifiable for cellular. Something about the circuit being fused in some sort of heat-applied material which would be diffcult, if not impossible.

Is there any way to lessen or get rid of the picket fencing which is so prevalent in the 150-160 MHz range while mobile. Some days it's so bad I can't listen to my local weather station.

It won't. Uniden has had to submit to the FCC plenty of documentation - photos, descriptions and independent test results - to show that the 780 (as with ALL new scanners) cannot be easily modified to receive cellular frequencies.

Among other things is the basic certification to that effect, which you can see, in .pdf format, thru a link at http://www.snowcrest.net/marnells/92452pdf.htm

> 1. Can police totally scramble transmissions so no one can listen?

Yes, if they can get their cities to pay for the new equipment. But
it isn't easy. Why do you think so many police departments are still
not even using trunked systems?

> 2. How can I know if they are using trunked?

Your first clue that the system is trunked would be that if you lock
onto a particular frequency, you can't follow a conversation; you'd
hear one person talk, but wouldn't hear the other person answer.

> 3. Can the police/fire know if im listening to their frequencies?

Theoretically, I suppose they could, if they targeted your house with
a directional antenna, but in practice they don't care. In the US,
you currently have a legal right under Federal law to listen to them
from a radio in your home, as long as you don't tell anybody what you
hear. Listening to them from a mobile scanner in your car is another
matter; several states or cities have outlawed that.

Yes they can, with various types of encryption, especially digital
encryption, spread spectrum, and as fancy as they want to pay for.

> 2. How can I know if they are using trunked?

See the other folks' replies.

The Pro-94 is a good radio, the reason you don't hear too much about it is because it can not scan trunk and conventional at the same time. Other then this, it works just fine. The Pro-92a is also a very good radio, and the Bearcat 245 is still considered by many to be the best for trunking. As for what is in your area, just ask for a freq sheet at your local RS. Many RS stores provide local freq sheets as a public service for their customers.

I am currently building a new website that address all this and so much more. Still under construction, but you are welcome to check it out and follow the progress. http://www.rebel-radio.net

Good luck!
Jim

So.. having a radio in your possession that MAY be converted to out of channel
operations (See Copper for videos) is probable cause for confiscation of that
radio? Humm.. anyone see any parallels with certain black rifles?

So.. lets say, that your President Grant is sitting on channel 15, no mods
turned on.. and the savey cop flips the mod switch etc and then transmits off
band... is he guilty of a crime, or are you? Having the capability is not the
same as committing a crime..right? Any one want to open that can of worms?
(full auto sears/ parts in possetion notwithstanding..we know the misuse of
that system already).

Now.. if I have a footwarmer on the tranny, but the only feature running is
the recieve pre-amp.. and when I key..its only 4 watts RMS.. have I committed
a crime? (my ah..er..hum..footwarmer is not in plain sight...btw)

I have been a ham (ex-K8LJS) and have been around CB long enough to still
have my CB license on the wall at home (KOR5625)

Sounds to me like someone is wanting to open up a big can of worms with this
situation, once again....

Sure about what? That they don't have direct communications or that they use 800 MHz? Yes to both, actually. As I stated elsewhere, troopers CAN outfit their units with extra radios, scanners, etc, but the OHP/DPS will not pay for them. (Note: This may not be true for supervisers and the brass.) A big point was made in media coverage that Trooper Evans only had the patrol radios in his unit, and so had no way of knowing about the pursuit. I happen to know that in some areas the local sheriff or PD will supply a local radio to the troopers stationed in that county. For instance, the troopers stationed in Payne County (where I live) have VHF-high radios on several local freqs including PCSO (155.535) and mutual aid (155.490). Several also have UHF radios capable of transmiting on Stillwater PD's Ch. 3 (460.525). There's plenty of programmable gear out there, just look on ebay. Trooper Evans had only been out of the acadamy for little over a year, so he may not have had the spare cash to outfit his patrol unit, who knows? Back in '71, when I lived in Bartlesville, OK, the members of the local CB radio club chipped in and bought one of the first Regency scanners (TMR-8H) for the local trooper.

As to the 800 MHz OHP trunking, I refer you to page 370 of the 2000 Police Call, Vol. 7, which lists all the talkgroups for the OHP/DPS. I don't have a trunking scanner yet, (waiting for the BC-780), but I have monitored Troop A (Okla. City) on a conventional scanner on the listed 800 MHz freqs. The frequency used doesn't seem to hop around much, but as the load increases, that will undoubtedly change.

Actually, yes, I think in the eyes of the FCC, you have. Just because they
dropped license requirements doesn't mean Part 95 has been pronounced null
and void. As I recall, according to Part 95, posession of a radio that has
been modified or is capable out of the box of being used outside the CB band
(or exceeds 4 watts) is a violation of FCC rules and can be confiscated and
the owner/operator fined. The same with the linear amp. You've got it,
it's hooked up to a CB radio, you're breaking the rules. Kinda like being
in posession of burglary tools, the police don't have to catch you actually
breaking in anywhere, just having them is enough. As to enforcement by
anybody besides the FCC, I don't know.

Snip:Having the capability is not the
same as committing a crime..right? Any one want to open that can of worms?

I read a FCC statute that if you just have in your possession a amplifier or
transmitter it shall be presumed it is for use.
If you are a jerk shouting "Hello Skipland" on 29.100 you deserve to be
busted but this post is not about Illegal operation in the amateur bands.
Radio operation is a privilege just like driving.....Not a right.
I know it sound like B.S but it sounds like enough to cause much of misery
with the legal system "ask anyone who's been accused of DWI" trying to prove
innocence or why you should have your Illegal stuff back.
"Mission accomplished for some square miserable bastard with nothing else to
do "
NOTE: I am 99 % positive I read it correctly, it was hard to find and almost
hidden.

No, but a little effort would probably show that he's part of a
"multi jurisdictional task force", easy enough to arrange, so
now each local jurisdiction essentially expands it powers of
probable cause ten fold and the revenue just flows in.

Burglar tools in the trunk? Execution on circumstantial evidence?
Paid informers? The lawyers have been working hard Gunner. There's
little that they can't use to make a case for most anything.

>

Of course not but that won't stop them from putting you in a cell
with an informer who will then swear that you told him that you
were planning to blow up some school.

>

Damn that does go back. Circa 1968 or something like that.

None of these relate to crimes anyway but regulations. And
if you are not a licensee of these regulators, then...?

It might depend on your meaning of "full coverage" but there is no
continuous coverage, 500kHz - 1000Mhz'ish handheld unit produced at the
moment with trunking capabilities :-(

> I have been a ham (ex-K8LJS) and have been around CB long enough to still
> have my CB license on the wall at home (KOR5625)

...As a matter of fact, yes... (you mentioned you're ex-K8LJS) According to
FCC regs, the mere possession by a non-ham of an 11 meter-capable amp is
illegal, whether in use or not. The argument that it's not in use will fall
on deaf ears. (wouldn't that kind'a be like saying, "..Sure officer, I've
got a pound of pot, but honest! I wasn't gonna smoke it or sell it!")

...As a licensed amateur, you can legally own an 11 meter-capable amp as per
FCC regs..... although, having it hooked up to a CB would indeed open a
whole new can of worms for you with the FCC were your station to be
inspected.

The requirement for licensing was dropped from the regulations for Citizen's Band... FCC regulation was not. Marine VHF communications recently underwent somewhat the same process (license no longer required for pleasure boats under 60').

> It could be - how would I know?

Use a pair of high fidelity headphones and listen to the scanner
through them instead. If you hear the hum, then it's probably coming
off the air. Also, you might try taking that tape recording and
feeding it in to your sound card. There are various Fourier transform
and spectrogram packages on the Internet. Most of them are free or
free-ware. If the hum is strictly 60 or 120 Hz, no matter what
channel you're listening to, you have a hum problem. If the hum
varies between 70 and 200 Hz, then it's CTCSS or DCS.

> on the same frequency. Unless it falls on top of an actual frequency you're
> trying to monitor, I wouldn't worry about it.

Many thanks for the info. The reason I am trying to find out what is going on, is because I monitor the old Southern Pacific road channel 1 (160.320 MHz) and the noise occasionally will break through the squelch, either steadily or intermittently, and when I turn up the squelch to try to keep the scanner from being stuck on that channel, that has the effect of quashing the weaker signals on all the others, which is simply irritating. :)

Further observations: Performing a search up and down from 160.320 MHz, I found what appeared to be a dead carrier at 160.240 MHz and turning the squelch up all the way will not cover it up. The buzzing noise heard on 160.320 MHz isn't there all the time. A lot of times it's there, sometimes it's not. It kinda depends on the location, but I can't tell why any particular location would have whatever effect. When I plugged in 160.240 into my little Bearcat 70XLT, I got nothing but static.

I guess the logical question would be: Is this particular "birdie" on 160.240 present in ALL units of this particular model scanner, does it vary from unit to unit of the same model where they occur? If it varies, maybe exchanging it for another unit might be the remedy?

According to some specifications for the BC245XLT that I found on the internet, this scanner will not pick up CBs. CB freqs are between 26.965 and 27.405 Mhz and the 245 only goes down to 29.0 Mhz. The easiest(cheapest) way to get the CBs would be to find a cheap used one.

I saw a reply to my last post at home that I was planning on replying to
from work, but I don't see it here.

When I was referring to the "export" radios, I wasn't talking about
modded or modifiable radios, but certain types or brands that did just
not have type acceptance by the FCC and so had been declared illegal
based on the brand-name. Radios like Galaxies (I loved my Saturn),
Connexes, Rangers etc are not even legal to posess without a ham
license, and I've heard that they're outlawing them altogether as few
hams use them for their legal purpose. Comparing a modded/modifiable CB
(I think the Grant might be on the list of banned radios also) to an
export CB is sort of like the difference between an AR-15 and an M-60
for hunting. One may or may not be legal according to the mods done to
it, while the other is almost a sure bet to land you in jail, even if it
was just the deputy sheriff who caught you with it. BTW, if modifiable
was the criteria they used, then almost any radio on the market would be
illegal as they can all be modded in some way or another that would
render them capable of illegal transmissions.

In return for not requiring proof of radio theory knowledge or the morse
code (required by international treaty) by taking a licensing test, the
radios that are allowed in 11-meter band are strictly regulated (not

necessarily enforced) and certified to prevent interference or safety hazards. I am not endorsing or defending these laws (I got interested in ham radio through SSB on the high channels myself), just explaining my earlier statements about outlaw CBs.

I do think that anyone experimenting with modded CBs should at the very least take the time to educate themselves to the problems they might cause and the potential hazards involved, and understand that what they are doing is illegal. Once someone understands that, the consequences are based on their decisions.

I wonder if some of these truckers really think it is such a good idea to pump 800 watts into a mirror-mounted firestick a couple of feet from their head/eyes after showing their buddies how their little footwarmer will light up a lightbulb when they key down?

We always changed freqs, if we were in the non-freq hopping mode on the
SINCGARS. The only fixed channel stuff you'll find are things like range
control and other non-field based units.

Only if there was a law in the US Code or a state law outlawing
possession of a ham radio by a non-licensed person. The comparison
isn't valid if no such law exists, since there is a law against
possession of pot.

(snip)

It's sort of like a person violating a part of the UCMJ while they
aren't in the military. The UCMJ only applies to military personnel.

5518. Dave's Scanner Desk Update

Newsgroup: rec.radio.scanner
Date: 2000-09-06 18:54:18 UTC
From: David Bate <davebate@home.com>
Message-ID: <upwt5.56681$eR5.1596395@news1.rdc1.on.wave.home.com>
Source record: 80246
Cross-posted to: alt.radio.scanner,rec.radio.scanner,sci.astro.satellites.visual-observe

Hi All,

Dave's Scanner Desk (Durham Region) has been updated, with an all new look
and new information.

-Scanner frequencies for Durham Region Canada area.
-Weather photos and info for Southern Ontario.
-Compass/RESCU camera shots of Highway 401/DVP and the Lakeshore.
-Military information for CAF, USA and NORAD.
-Space (CSA/NASA) related information.
-STS Plus and STS Update Satellite Tracking files and information.
-Railway, Ontario Provincial Police and other specialized pages.

Also join the Scanner and Communications RingSite that groups all sites that
deal with scanners and radio commmunications. A easy way to advertise your
site, via other Ring Sites. See the bottom of the home page for more
information.

Hi I need walkie talkie repair info for to fix a
older pair of walkie talkies for a someone.
Are there any websites or hook up info.
What are the crystals for receive or transmitt?
Also plenty of info on how to pick them up far
far away on 49.860MHz. Thanks.

5526. FOR SALE: Radio Shack PRO-2052

Newsgroup: rec.radio.scanner
Date: 2000-09-06 20:45:37 UTC
From: akinius@nospam.net
Message-ID: <39b6ace6.3810533@news.earthlink.net>
Source record: 80153

Greetings!

I have decided to sell my PRO-2052 scanner, since I never use it. I only use a scanner while at work, and this one has never even been powered up; it was basically an impulse purchase. It comes with two years left on it's service plan.

It's on Ebay at:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=430700694

Thanks!

5528. Discone Costs? Blacksburg VA Freqs?

Newsgroup: rec.radio.scanner
Date: 2000-09-06 21:10:34 UTC
From: Victor Vanderberg <victor1@vt.edu>
Message-ID: <8p6bpj$t07$1@solaris.cc.vt.edu>
Source record: 80154

Ok a few questions:

1) Is a discone an ok choice for an Apt setting or is there something better out there that people are using? 25MHz - 900MHz

2) Where's the best place to get a good discone for my scanner? (Cheaper the better)

3) Anyone in Virginia Tech , Blacksburg VA interested in scanning? Drop me some frequencies to listen in on.

4) Icom 706 ,the first one. (Ok not a scanner question but geared to radio enthusiasts nonetheless). I remember hearing people say that there was a mod for these babies to achieve 500Hz to 200MHz with no gaps. Anything new on this? This was a big topic about 2 years ago. (not the white wire mod thing.. all the way up to 200MHz)

Thanks! Im just getting back into some radio fun:) Happy Scanning!

-Victor

Here is a link that will give you the entire list of launch frequencies for both the Kennedy Space Center (shuttle) and the Cape Canaveral Air Force Station (all unmanned launches).

If you are local, the 146.94 retransmitts NASA audio (countdown chatter, control room chatter, along with official NASA commentary)

http://home.cfl.rr.com/scanner/launch.htm

If you are local, the link: http://home.cfl.rr.com/scanner

has all frequencies for brevard and local counties. best scanner site around!

cheers

> watts, whereas CB radios have an typical output of 5 watts (or more ?).

True enough, but the "goons" have been hard at work wreaking new forms of havoc. I read recently problems with people buying GMRS equipment (with no licence of course) and using it in place of FRS applications (some of the frequencies are shared anyways). It's only a matter of time...

Maybe 11 meters will become useful again? (food for thought)

John

The Australian version of the bearcat 245, called the UBC-245XLT, is the only trunk reciever with the widest coverage to date, 66-88MHz low VHF coverage rather than 29-54MHz 12.5Khz steps on VHF 137-174MHz and Continuous 800MHz. However getting this baby is rather difficult. It may be available through Javiation http://www.javiation.co.uk/ soon. As for the widest bandcoverage without trunk, the AOR AR8200 MKII is the grand daddy, 540kHz to 2040mHz CONTINUOUS no blocks or breaks on european export versions. Bit pricy, but this radio can do just about everything (except trunk), and do it better too. Simply love mine!!

Yes, but they may not be inaudible if the recorder only needs about 20 microvolts of audio, and the scanner is feeding it a couple hundred millivolts ! This is a common problem with recorder hookups, and happens because the hum in the line, while supressed enough to not be heard by the speaker, is blastingly loud to the tape recorder.

Several participants in this thread have their laws, rules and regulations, and levels of authority and jurisdiction mixed up.

CB - no individual or station license required, but technical regulations are still in force and apply to anyone within the FCC's area of jurisdiction (USA and territories).

This means that possession of an external RF power amplifier ("linear" - although that is only one kind of amplification and is the main type used for AM mode) that is designed or adjusted to work in the CB band is NOT PERMITTED FOR ANYONE in the above-mentioned areas. If you are a ham and have an 11-meter "footwarmer" and it is tuned to be maximally efficient in the 11-meter band, you are in violation. However, if your originally-11-meter amplifier is tuned to 10 meters or some other band, there is no apparent violation for a licensed ham operator. (The FCC might still ask for some form of certification or proof that the amplifier cannot be operated on 10 meters.)

FCC has authority to regulate radios and their use all over the United States and its possessions and territories. It doesn't matter if any individual is licensed or not; the regs apply to everyone. If you're unlicensed, transmitting is prohibited. If you're licensed, the other regulations regarding proper operation and technical specs apply to you.

Local police departments do not have jurisdiction to enforce FCC regulations. That is a Federal function, usually carried out by (depending on circumstances) the FCC itself, the FBI, and/or the United States Marshalls. A knowledgeable police officer may bring your unauthorized radio to the FCC or DOJ's attention, but he may not make an arrest or confiscate the equipment UNLESS there is a violation of some other statute that is within his power to enforce. If the officer knows that much about radio, she should also know all about the jurisdictional issues.

In the case of an 11 meter amplifier, a local officer could charge you with a relevant motor vehicle equipment violation if such regulation exists. If your radio transmissions are causing interference with audio or radio equipment belonging to someone else, you could be charged with some sort of "disturbing the peace" or "disorderly conduct" offense. Naturally, if you fail to cooperate fully with the officer to the extent required by law under the circumstances of your encounter, you can be charged with disorderly conduct or even some form of obstruction of justice regardless of jurisdiction on any radio issues.

So, in short, while the police do not have jurisdiction over your CB radio, it will not be productive to rub their noses in the fact.

Gotta give credit where credit is deserved.

We bought a home security system from Radio Shack this past weekend. We originally went in to buy parts to suppliment another system we have, but we found a better one for $200 that is X-10 compatible, so we got it as well as a front door intercom system for $50.

The store attendant was very courteous, let us open the box and read the manuals to make sure it was what we wanted, brought out a catalog and showed us several choices, let us take our time with the items while he waited on other customers, wasn't pushy at all. He was definitely an exception to the rule based upon some other employees in there that we have had the misery of dealing with in the past.

"Good Job" goes to that particular worker. Good luck to the rest of you getting local Radio Shack employees like that. With any luck, he will stick around for a while, at least until I can get back to buy my scanner discone antenna and coax.

Why the need to block out???

As long as the FCC doesn't block this NG I say scan it unblocked and
continuous.
You don't have to read all the mesages, and what would happen if you read
something you didn't like??

BLOCK FREE NEWSGROUP SCANNING ASSCOCIATION

An amp is not a radio. It is illegal for non hams to posses an amp capable of being used on 11 meters and having one will lose you both the amp and your radio if you get caught. The radios he is talking about are also illegal in the US. Not because the may or may not be modified, but because they are not type accepted by the FCC for sale/use in the US.

If you are using a 1/4 wave antenna, try switching to a 5/8 wave like the radio shack mag mount 2 meter.

If you can't do the work yourself, it would not pay. The labor costs are such that it is much cheaper to buy a new pair and chuck the old ones.

You bought a home security system from radio shack for $50?
Just how secure do you think this makes your home??

As a security specialist I can tell you that a burglar can get in to your home with no trouble at all and have time to go through your whole house and grab most of your valuables, and if by chance you and or your wife should be home, even have time to do *other" unthinkable things, and get away long before any police or neighbors come over, becuase they would know instantly what kind of security system you had, and know how to disarm it. It wouldn't take a criminal genius to buy a security system from RS just to learn how to disarm it quickly.

Only a good quality (wireles) security system, installed by experience installers, and monitored by a professional monitoring service can assure at least that the average burglar's "visit" be as brief as possible. I've designed 1000's of systems for clients and I'm totally honest with all of them about this. At best we can only minimize an intruders visit. Price for an average system installed, about $1200, plus $20 a month for monitoring. A system without monitoring, no matter how good it is is next to useless. I've designed systems for homes that ran as high as $26,000. But unless you are a high profile figure or have extremely valuables, a true *professional* burglar will not bother you, so you wouldn't need to get into hi tech encryption devices powered by battery back up, and monitored by satelite. The best I could do is make sure that an intruder's invasion in to your home would be as brief as possible. With such a system, the intruder's stay would be under 9 minutes without an armed guard on duty. I could garentee that if you were home during the breakin, you would know as soon as the intruder stepped inside, or if you prefer, entered your secured grounds.

The RS employee didn't do you a favor. You purchased false piece of mind, they got your money. Any two bit junkie burglar can easily get in your house. For clients that couldn't afford my services I would at least recommend they get an ADT system, at least it's done by professionals, and monitored!

I do wish you the best of luck!

You can't legally obtain such a radio in a "free country" like the USA, perhaps
you could visit one of the many "unfree countries" and get one there.

It depends where you live. Here in NYC I am told by my friend (NYC
policeman) that the monitoring companies do not respond when the alarm goes
off.
If that is the case, he is better with the RS device. The only ones that
will always respond is the police. You don't have to spend $1200 for that.

5554. Re: Pizza Delivery Frequencies?

Newsgroup: rec.radio.scanner

I used to work for Domino's & we never used radios. I never heard of any other pizza delivery companies using them either. We always made the pizzas to order and delivered them one at a time unless there were a couple of addresses close together. We never carried extra pizzas in the car, so we didn't need to contact the store while driving.

I dunno if that's the case for all pizza delivery companies.

Rodney

For area's such as you described I would recommend NOT using the police, but private armed services that monitor. You are correct, in some area's police do not respond to alarms because of such a high false alrm rate. Thank fully I haven't had to deal with this too often. In those area's there are monitoring services that dispatch their own or contract armed gaurds to the scene first. Many of these gaurds are retired police officers or police officers moonlighting.

any way a poorly installed inexpensive security system is not that reliable at all. For one thing these do-it yourselfers forget that they are installing a system that has been markered up 50-100%, so if they paid $200 for it it's only worth about $75. Plus they are installing a system that comes with installation instructions that can be obtained over the internet. Schematics, manuals, and instructions are easily obtainable, or you could simply walk in the store and buy one yourself just to learn the system. Each home is different so therefore the design and installation is different, with trained professional installers every installation is different. With do it yourself kits, they are all pretty much the same. Professional equipment is verry different from generic kits and systems. Our devices are made to our specifications and not sold to the general public. You could not obtain schamatics or manuals for our systems any where. In addition, all our electronic devices use entirely different

frequencies, and codes. In short, our systems, or any professional security company for that matter, are of better quality, and more secured. I can't stress how important a professional install is over a do it yourself. No matter how handy you may be, your not a trained security specialist. Placement and selection of devices is critical. I've been involved in this business long enough that I can think just like a burglar. I can walk in to any home and plan a fool proof break in. I am by no means trying to brag or sound like I am the best at what I do. In fact any trained security specialist can do what I can.

Bottom line. Do it your self kits are fine for some things, but not for others. We are talking about the most precious things to us, our home, and family. This is NOT one area you should want to cut corners! I highly recomend to anyone to at least TALK to a trained security specialist, hell talk to as many as you want, shop around all you want, but for heavens sake have it done professionally!!

Regards.

Pot is illegal under nearly all circumstances, not so for linears, and as it has a dual purpose, that of recieve preamp..... your comparison is poor.

Now, the original thread indicated average everyday cops were using a CB/Ham etc antenna as probable cause to stop and search... the posession of which is a legal enterprise.. so they are using a legal antennna as probable cause to search for illegal items..see anything wrong with this picture? Not to mention curbside confistication of legal (unless the cop is qualified to pronounce said radio is illegal..and considering most dont know dick about radios...) there is a major problem here.

Although it's not illegal to make mods, etc. to a radio, it is illegal to use them (ex. a tech-class ham can have a HF radio as long as they don't transmit on it). But when your talking amps for 11 meters, that's different. 11meter amps aren't legal in anycase, so there's no reason to have one at all (making them illegal). But in the same token, if you modify a radio to transmit on a frequency that you won't possibly ever use, there's no reason to have it (making it illegal....)

You would do better and have a LOT farther range if you picked up a
couple of FRS radios......I have several but the best ones, believe it
or not are the GE at Walmart for 19.99 each!! Can get 1 1/2- 2 miles
with them!

Anyone know if someone sells an external charger for the 245xlt
battery packs? I'd like to be charging one while I'm using the radio.
Too bad it cant use AA's!

Thx,
Keith

Blake,

I am verry fimiluar with ADT nationally, and I have visited and trained by invitation. I am aware that there are indeed some troubled area's in some locations. Part of this is due to their amazing management turn over, and part by the lack of communication between the 3 entities that make up ADT, management, installers, and monitoring. I have toured some of their centers, and I can honestly report that most are run very well. There are some trouble spots. I believe it's the very nature of the beast. They have grown to be so large that the right hand doesn't know what the left hand is doing, and some times doesn't even care! So you do make a valid point, one I can't totally deny, nor am I surprised to hear about the hiring story. Often they work their installers hard, and are under staff. I'm NOT making excuses for them, just realizing the temptation to get a new installer aboard without proper background checks. Unacceptable as far as I'm concerned!

I would not recomemed ADT as the first choice, or second or even third, but they do have their place trust me. Often I run in to couples just starting out on a tight budget. They live in a risky neighborhood and desperately need some security and peice of mind. Even my lowest priced systems are out of their budget. Rather then see them get in depth through financing I will advise them to call ADT. You really don't get much for their $99 system, just the bare bones which they are actually throwing in for free, what you really are paying for is the installation. It takes one well trained installer about 1 hour to install such a system. The $99 special is a way for them to get in your door, very few people actually settle for that, and the sales rep makes $30 from the $99 special, so they try real hard to *up sell*, that's where I came in for training. Basically here's how it works. You get a $500 system for $99, but you have to sign up for 2 or 3 year monitoring contract, and that's where they make their money. Fine for the company but not for the sales reps who only made $30 out of it. They make their money from upselling. I show them how. I can design an ADT system that would be equal to one of my $900 systems that would cost you about $600 from ADT. These systems are high quality, and their wireless are the best on the market. My only real objection that I have with ADT is they impose a 2 minute delay before the alarm signal is sent to the monitoring station. They do it to eliminate the number of false alarms, but it's a bad call as far as I'm concern. I'm more concerned with providing my cl;ient the absolute best line of protection I can, and reducing the intruders stay to the shortest possible time. I'm not as concerned if a police officer gets annoyed if he has to respond to a false alarm. Many Police agencies have implemented fines for false alarms, and that's fine because most of my clients would rather pay a $50 fine for a false alarm and have the police

respond quickly, then have no fines and deal would slow reponse or no response. So the two minutes become very crucial. Intruder breaks in through back door, 90 second delay before an audio alarm goes off, another 30 seconds before the signal is sent to the monitoring station. The monitoring station know's it's a back door entry. A call is made to the police. Depending on location of nearest police car, it could take another 9 minutes (or longer in some areas) for the police to arrive. So now we are up to 11 to 12 minutes with an intruder in the house!

For young couples or any couple on a tight budget in a risky neighborhood I take the time to advice them even though I make nothing out of it. Since I'm fimiluar with ADT's line up, I complete a thorough evaluation of their home and design a system for them. They have all the information they need from me. I advise them about the 2 minute delay and explain some work arounds which I'm not at liberty to disclose here. When the ADT sales rep comes to their house they already know what they need and how much it should cost. I've provided a way for them to get the maxamum amount of protection and the best quality for their money with out taking on a new loan!

So as far as I'm concerned, even a ADT security system installed by a former criminal (which is not the usual case), and at the mercy of dealing with slow response from the police in troubled area's, it's still better then a do it yourself inexpensive unmonitored system. If it were me, my home, or some one I cared about, I would rather taking my chances after I got all the odds in my favor that I could get. Because the other alternative is much more riskier!! A professionally installed monitored system is 100 times better then a do it yourself unmonitored system!

The good news is this, there are probably dozens of better companies then ADT in your area, and if they are half as dedicated as me, they can provide you with the best response time, and hassle free police calls!!

TW,
You undoubtedly did. As I stated in another post, the UHF trunking is in use only for the Okla. City (Troop A) and Tulsa (Troop B) metro areas, as well as the Turner turnpike units, that turnpike runs between OKC and Tulsa. UHF may now also be in use in the Muskogee (Troop C) area, but I can't confirm that myself. All other parts of the state use a primary system of paired VHF-lowband freqs. a base-to-car or car-to-car channel, and a car-to-base channel. This is supplemented by a system of VHF-highband remote base/ repeaters that relay either the car-to-base channel or the base-to-car channel. Some remote base/repeaters are linked to the appropriate Troop by UHF radio links. The system is old and outdated, and does not perform very well, which is why the 800 MHz system is being implemented. Freqs in the 800 MHz band have been assigned for most areas of the state, but the equipment purchase and installation is going VERY slowly.. In my area, 60 miles north of OKC, the troopers communicate with Pawnee (Troop K) on 44.70 MHz base-to-car and 44.90 MHz car-to-base. Other areas use 45.22 MHz base-to-car/45.18 MHz car-to-base. You can generally hear the Patrol's aviation wing working traffic with ground units on the base freqs, 44.70 and 45.22 MHz.

Yeah, having been pulled over a couple of times for that very reason, I do
see a problem. What I don't see is the funding to mount a major legal
challenge to the police practice of profiling possible drug courier or
escort vehicles based on the amount of visible radio antennas on the car.
This profiling is a fact, it has even been discussed on the TV news in Okla.
City as part of the multi-county drug task force. The ACLU isn't interested
in profiling unless it involves a racial minority. As for searching for
illegal items, it's a Catch-22 deal. An honest citizen wouldn't object (in
theory, and in their eyes) to a request to search, so if you object, they
detain you until a dog is brought to the scene. Even if you are clean,
you'd still loose that time waiting. While I'm a major supporter of local
and area law enforcement, I make an exception for the drug taskforce people.
They are too over-the-top regarding drug interdiction.

Get an older analog dial Radio Shack patrolman multi band radio that covers
49 Mhz. Because of over-lap it can hear both sides..I did it once in the
early 90s when I had one.

Linears are illegal for CBers under all circumstances. If you want a
legal pre-amp, then use a pre-amp.

> Now, the original thread indicated average everyday cops were using a CB/Ham

I would agree with you on that, and hope that you didn't think
otherwise. I'm curious if the ARRL has seen enough of a problem from
this to have said anything about it? I can guarantee that if the cops
started showing a pattern based on stopping people due to funny
antennas, the ARRL would make the NRA look like the PTA.

According to their CB-related regs, the FCC presumes that if you posess
a certain piece of equipment, you will use it, thereby making amps
illegal for CBers to own. Now where I get confused is with ham
equipment, as the same concepts do not seem to apply there. I wonder if
by some chance you were caught with an 11-meter amp (posession, not
use), would claiming that you were studying for your license make a
valid defense?

5575. Re: RS Pro-94

I love my Pro-94! Sometime I'd like to compare it to a BC245, just to see the differences, but I have no complaints about the '94. It follows the local EDACS trunking system great. It works on conventional frequencies (highway patrol, local hams, electric company, etc.) very well. It's funny that we don't hear more about it.

It's against FCC regs for non-amateur-licensed persons to possess an RF
amp.... period. Whether its 11 meter only or 160-10m makes no difference.

The Amateur regulations are completely different.... not much comparison
between the two services. Amateur regs were deliberately designed to
encourage experimentation and exploration of radio theory.

Then their search will probably be ruled illegal in court. The courts
have decided that merely refusing permission to do a search isn't
probably cause.

5584. R-7000 DC Power Plug

Newsgroup: rec.radio.scanner
Date: 2000-09-07 15:09:03 UTC
From: digimon <digimon_7601778@hotmail.com>
Message-ID: <jcOt5.21461$58.3237918@typhoon.tampabay.rr.com>
Source record: 80110

My R7000 has a DC power (13.8VDC) input jack that is tucked away inside the power supply section. It has a male jack with a jumper wire that jumps the AC converted DC power to the radio. It is made so that you can run the radio on 13.8VDC by pulling that jumper and plugging in 13.8V directly.

On the back panel, you can unscrew a narrow vertical plate next to the ac plug and fuse. Underneath there is a cutout the same shape as that plug. It appears that the plug can be mounted so that AC or DC power can be chosen.

QUESTION: how do you mount that plug to the back panel. It is shaped right so that you can push it through, but there is no obvious means to fasten it down so it is a permanent connector.

Anyone know of how this is done?

TIA

When you buy the 12VDC conversion kit from ICOM, you are given a small
metal bracket that is used to mount this connector to the rear panel.
You also get a 12VDC power cord with mating Molex connector to plug
into this rear panel connector.

You can just leave the plug hanging out through the hole in the back
panel and all will be well. You can make your own mating cable for 12
VDC if you wish. Molex connector shells and pins are readily
available.

Or you could cut off the original connector and replace it with
something you can mount directly to the rear panel. Even add an AC/DC
switch so you can dispense with the jumper.I would use a common
coaxial power connector with 2.1mm center pin, center pin positive.
This is the most common size and polarity in the industry, and is the
same as virtually all ICOM external power connections.

Running the receiver from external 12 VDC has a big advantage. Major
cause of failures in the R7000 and others in the same series is
internal heat. Things are worse if the receivers are stacked with
other equipment. Moving the power supply outside the receiver will
result in longer life and fewer problems.

The power supply in the later R8500 is external.

Source record: 80112

Thanks for the reply and info.

I actually was considering the switch and coaxial power plug and may still
do that.
I thought there might be an easy mount way with the original.

Wonder why they left the DC connector inside like that? Just to make you
buy a DC kit with nothing more than a mounting plate and a cord?

Yes on the heat. I mounted a small 12vdc fan on the back of mine. Several
friends did this after one of ours failed. Analysis showed that it was
thermal induced failure. You almost have to run a fan on the back when
powering by AC.

cheers

Read part 97 as to what constitutes a LEGAL amp. You will find certain features on CB amps that make them illegal, even for Amateurs.
So called CB amps, by virtue of design, have certain things that cause them to be considered contraband in the US, and therefore are illegal for ANYONE.
Now before anyone asks, "what things?" go read part 97. Lets see if anyone figures it out.

A telemarketer, OUCH, now that hurts Neal.

Acually I've retired from the security industry. I'm now gainfully employed designing high end trunk digital encryption 2 way communication systems for Pizza Delivery Shops ;)

Yet I haven't seen where it is illegal to own ham equipment without a
license. Or did I simply miss something? I know i had my first 2-meter
rig the day after I passed my test. Is this one of those tecnhicalities
that they just don't worry about for new hams?

Gee.. they never said anything when I ran RTTY via computer on Chan 23 many
years ago...<G>

Of course, living in the desert, in a valley not noted for its skip or even
reception charectoristics did tend to be "out of sight, out of mind".
Which is why, there are a number of mobils who do run linears on occasion,
simply to be able to call for help or even simply communicate, because of the
terrain and poor reception. Since the CB craze died 10 or more years ago, the
yahoos are mostly gone, and CB is simply another tool, rather than a
lifestyle.. they have now gotten on the net... lol

Here it is for those who have trouble finding it.

a) No more than 1 unit of 1 model of an external RF power amplifier
capable of operation below 144 MHz may be
constructed or modified during any calendar year by an amateur operator
for use at a station without a grant of certification.
No amplifier capable of operation below 144 MHz may be constructed or
modified by a non-amateur operator without a
grant of certification from the FCC.

(b) Any external RF power amplifier or external RF power amplifier kit
(see ï¿½2.815 of the FCC Rules), manufactured,
imported or modified for use in a station or attached at any station
must be certificated for use in the amateur service in
accordance with Subpart J of Part 2 of the FCC Rules. This requirement
does not apply if one or more of the following
conditions are met:

(1) The amplifier is not capable of operation on frequencies below
144 MHz. For the purpose of this part, an

amplifier will be deemed to be incapable of operation below 144 MHz if it is not capable of being easily modified to increase its amplification characteristics below 120 MHz and either:

(i) The mean output power of the amplifier decreases, as frequency decreases from 144 MHz, to a point where 0 dB or less gain is exhibited at 120 MHz; or

(ii) The amplifier is not capable of amplifying signals below 120 MHz even for brief periods without sustaining permanent damage to its amplification circuitry.

(2) The amplifier was manufactured before April 28, 1978, and has been issued a marketing waiver by the FCC, or the amplifier was purchased before April 28, 1978, by an amateur operator for use at that amateur operator's station.

(3) The amplifier was:

(i) Constructed by the licensee, not from an external RF power amplifier kit, for use at the licensee's station; or

(ii) Modified by the licensee for use at the licensee's station.

(4) The amplifier is sold by an amateur operator to another amateur operator or to a dealer.

(5) The amplifier is purchased in used condition by an equipment dealer from an amateur operator and the amplifier is further sold to another amateur operator for use at that operator's station.

(c) Any external RF power amplifier appearing in the Commission's database as certificated for use in the amateur service may be marketed for use in the amateur service.

I can't find any mention in the part 95 rules regarding CW, neither allowing nor disallowing it. Considering that it is simply an unmodulated DSB carrier, I doubt that they could or would say anything. By the same token, even MCW is still standard AM but with a modulating tone applied, so I don't see how they could rule it illegal considering that it allowed on every other band that I can find. I remember a statement in one of my old license books that said that it was the only mode allowed on all bands as it was truly universal. It didn't specifically say the amateur bands.

Illegal to use is not the same as illegal to own.

Given the relatively few good SW receivers on the market and their pricing,
many SWLs own transceivers because they're a better deal.

Why be an irritant? The CB guys don't want to hear Morse code.

We're only talking 5 WPM these days, you know. That's a bit less than 1 character every 2 seconds.

Set the computer program up for around 18 WPM with spacing for 5 WPM and have at it. spend about 15-20 minutes every day max. keep adding letters as you master the previous set. practice real words for learning, run some random groups to see how you're really doing.

don't forget to get time on numbers and punctuation (the stuff that stopped the last few guys coming through for the test -- there's at least 1 question about call signs.)

shouldn't take you more than a month to get to 5 WPM and you didn't have to get all stressed out or bored or tired or anything. and they'll be able to grade your test with solid copy instead of having to take the "exam" portion.

Hi All,

I'm a newbie to scanning, though I did it many years ago when you actually needed crystals to scan. My questions: Is there anyone from Colorado Springs here? Colorado? Anyone with a 2052 with the patience to teach a newbie more about his unit? I've got more box here than I have the knowledge to use. I also have the software on my PC to run it remotely. Thanks, sorry for being such a pain! -Rod-

Dennis,

Hustler has a pretty good mag mounted mobile scanner antenna. I like it so much that I ended up buying 2 of them. I use one at home, with it mounted on the metal cover of a radiator and the other in the car. I cannot remember the model number for it but if you go to Hustler's site, its the only mag mounted scanner antenna that they have. It was a little difficult getting it but I finally found it at Lentini's - not on their web site but they did have it in stock. Oh by the way its about $25 or so.

Source record: 80128

It should be noted here that the PRO-90 is simply a 235XLT with a Radio Shack nameplate. Therefore, all "tricks" for the 235 will also work on the PRO-90.

5603. Re: NY/NJ Scanner Guide?

No, damn, I wish I could remember the name of the guide or the author. It was based in North Jersey (Wayne?) and I think it was called Metro something. Thanks to all who have helped via personal E mail also. Actually with the Web sites I've been directed to, I'm just about able to do without by compiling my own list and programming that into the scanner. --Ken

Spoken like a true salesman. !!
As a "security specialist" you should also know that RS sells wired and wireless systems and just because it was not installed by a "security specialist" that it cans still work just as well and you can even subscribe to a monitoring service in many areas.

You may want to reread what you are responding to. He said the "Monitoring
Services" are the ones who never respond in his area.

> where.

Hogwash, you can obtain schematics for just about anything if you know where
to look.
I would also like to point out that when you break it down they all function
the same. A circuit is either opened or closed.

In addition, all our electronic devices use entirely different
> frequencies, and codes. In short, our systems, or any professional
security

Not with cars. All the way back to Carroll v. United States in 1925,
automobiles have been treated differently from homes and persons by the
Supreme Court. The so-called "Carroll Doctrine" has been expanded over the
years to the extent that a person in an automobile has no reasonable
expectation of privacy and very few Fourth Amendment rights, regardless of
whether they are the driver or a passenger.

Isochron's patent pending VendCast® technology is introduced into a vending company's operations. The VendCast® electronics are installed directly inside each vending machine. These electronics capture sales, inventory, and machine health data and transmit it over a wireless network to Isochron's Network Operations Center (NOC). From there it is securely transmitted over the Internet to the vending operator.

triple conversion means 3 filters. it removes a lot more stuff out but not all. I get images on all my triple conversion scanners, just not nearly as many as the double converstion scanners, they get so many images that it often interfers with what you are really tuning into, for instance the pro-2040 gets cell frequencies at 460's, which is where many police frequencies are located. Every scanner is different, you have to get one and try it to find out how it does in your area. You might be happier with a basic scanner, you have to put them side by side and compare how they work. Just my opinion.

Can someone please tell me what that means? Is it
>> better as compared to doublr?? I thought you were not supposed to pick
>> up cell images on a triple conversion scanner but I know you can on bc
>> 860xlt and 9000 xlt.

Triple conversion means the received signal is converted three times
before it becomes "audio" for you speaker. Example:

Single conversion - the received signal is converted directly to audio
by the receiver's detector circuit.

Dual conversion - the received signal is converted to another radio
signal once, then to audio... as in: the received signal of,. say 151 MHz
is converted to an IF frequency of 10.7 MHz. It is amplified and filter
at 10.7 MHz then is converted (detected) to audio.

Triple conversion - the received signal is converted to another radio
signal twice before being converted to audio. Modern broadband receivers
tend to do this now. Say, a frequency of 151 MHz is converted to a first
IF of 60 MHz, it is amplifed and filtered at this new freq, then converted
again to a second IF of 10.7 MHz, more amplification and filtering, then
it is detected, (converted) to audio.

Get the idea?

I won't go into the reasons for doing this except to say performance for
triple conversion receivers is better, at the cost of complexity and price.

Nope.. you didn't miss anything... It is NOT illegal for a non-amateur to own amateur equipment, nor is an amateur license required to purchase amateur equipment.... with the exception of RF Power Amps. As the regs stipulate, you may purchase and possess (without benefit of an amateur license), but not operate same equipment except to receive.

Actually, most companies avoid the postal service because they face the possibility of mail fraud, and a host of other legal responses, if they "screw" a customer through the mail. With UPS (and other carriers), they don't face this threat - the poor customer is left to fight it out with the company alone (which is exactly how the companies like it).

A verry good alternative would be the "freeband", There are modified 10 meter and 11 meter radios equiped to cover the freeband. It's all sideband and range is excellent with all the skip advatages of the 10 meter band.

For more info see: http://www.rebel-radio.net "Freeband" section.

no .no. non

Each conversion involves moving the signal to an intermediate
frequency. In a single conversion receiver this happens once. A local
oscillator is mixed with the incoming signal to produce sums and
differences. In a Single Conversoin receiver for AM, the intermediate
frequency is almost always 455khz. The signal gets amplified
considerably at this frequencye (often there are several amp stages),
and then it is detected.

An image would be 910 Khz from the desired signal. At MW
frequencies, this is far enough away that a very crude bandpass filter
will effectively suppress the image. However at high frequencies, the
difference become small compared to the tuned frequencies, and at VHF,
it is miniscule, so bandpass filtering is impractical.

The first approach is to move the IF frequency up, so that the image will be further away. FM radio's do this by putting the Intermediate frequency at 10.7Mhz. Many triple conversion scanners put the second Intermediate frequency at 10.7Mhz. Very simply components for this, and the FM detector are very common, and very inexpensive. This is also what drives the 455Khz IF, very commonly used, so parts are common and cheap.

Generally most of the gain, and almost all of the selectivity in the receiver will be in the last IF, along with the detectors (FM,AM,SSB,Synchronous)..

In order to have reasonable Image rejection at all on HF and VHF, two intermediate frequencies are usually required.
So the signal is mixed with a fixed local oscillator, and up or down converted. Often it is around 40Mhz, but it doesn't have to be. Usually there is band pass filtering here to make sure that images cannot get through to the next stage (which is typically 455Khz).

It doesn't take a lot of bandpass filtering to reject even a VHF signal 80Mhz away. Many scanners have triple conversion, which puts the images even further away, often several hundred Mhz away.

Unfortunately none of these methods are very effective in low priced DC-light scanners because most of them have absolutely NO bandpass filtering on the front end, so these receivers tend to have very poor image rejection. This is what distinquishes the DC to light scanners from the real receivers like the IC-8500 and IC-9000. I think I counted more than a dozen bandpass filters up front in the 8500 schematic.

So in a triple Conversion receiver, the first oscillator will produce an IF frequency often in the range of 200Mhz, so any image will be 400Mhz away, The second conversion will be typically to 10.7Mhz. If you are looking for normal FM, it will be detected at this stage, otherwise a third conversion (which does the actually fine tuning so to speak) will convert down to 455Khz, where most of the passband filtering will take place, and everything except FM will be detected (narrow band FM, AM,SSB,CW etc).

On some HF receivers, the 3rd IF will be at 50Khz. It is fairly easy to produce low loss, filters with good shape factors at 50Khz.

Only after detection do you get audio.

Hi all,
Just a quick mail to update you all on the site. www.frequencyuk.co.uk

New features include: Clickable maps of airfields and ICAO search.
We have also added a lot of new frequencies to the county order section and to the searchable database. There is also an airband search to find different airfields and to check which freqs are being used and by whom.
All the usual features are their: up to date news, message board, for sale pages, monthly poll, interviews, book reviews and of course endless amounts of frequencies in county and subject order such as marine, civil air, military air, CB, search and rescue and the shuttle.
There's a lot more in the site so come have a look and let us know how we are doing.

True, but the FRS radios have more sensitive receivers and have a
much lower noise floor (no skip, amps, etc.) I did a test with a
friend across town and found that a standard set of CBs with 1/4
wave whips were outperformed by a pair of Kenwood FRS radios with
0.3 watt ERP. Your milage may vary, of course, but power isn't
everything....

(As an aside to that, if you have the gear, listen to the ham
radio propogation beacons at 14.1 MHz (CW). The format is,
Call sign and long "T" at 100 Watt, followed by 3 more long
"T"s at 10, 1, and 0.1 Watt. You usually find that if you can
hear the beacon at all, you'll hear it all the way down to 0.1
Watt. The beacons are scattered all over the world and have
a specific sequence of operation.)

Eric

>equipment, as the same concepts do not seem to apply there. I wonder if
>by some chance you were caught with an 11-meter amp (posession, not
>use), would claiming that you were studying for your license make a
>valid defense?

1==> I certainly wouldn't think so, unless there was some provision
that allowed you to buy equipment in advance of being granted your
license on the condition that you didn't use it.

Would think this highly unlikely, as it would, in practice, allow
almost anyone to possess a linear amplifier. All the illegal user
would have to do is buy a license manual or study guide and there
would be no way of proving that he _wasn't_ studying for a license.

2==> However, if it was ever accepted as a defense, it would set an
interesting precedent. A high school kid with a submachine gun could
claim he was planning on a military career. Caught with prescription
drugs, he might claim that he was studying to be a pharmacist or
medical doctor. ;-)

3==> If you got caught with illegal apparatus and tried this as a
as a defense, your authorities would probably get a good laugh out of
it, though.:-)

>frequencies. (although... I don't think it's an approved mode for the 11
>meter band)
>
1==> Sorry, thought could lay my hands on my old CB license, but can't
find it at the moment. Am certain, though, that HF CB channels on 11
meters didn't [and don't] allow anything but AM or SSB voice
transmission. At one stage the issue came up when some farmers wanted
to use CB frequencies for telemetry applications, such as the remote
control of irrigation pumps.

Then too, if CB had been allowed, those chasing DX would have bought
Telereaders or communication computers so could use code on the CB
bands without the need to learn it. In DX apps, code would have
offered advantages as can get through where voice wont.

2==> On our UHF CB channels around 465 Mhz the service is restricted
to FM voice with the exception that can use tone modulation for
selective calling and repeater identification.

However, can't quote the regulation numbers to you at the moment. If
get time will look it up on Australian Communications Authority site
or at WIA [Wireless institute of Australia] site.
[Assume they will both have a site but don't know the URL's offhand.]

> Just my opinion.

Triple conversion does NOT mean the receiver has 3 filters. 3X conversion means the radio's circuitry employs 3 mixers- thus converting the incoming frequency to 3 different IF's. Because the 1st IF is hi in frequency, image rejection is quite good.

It used to be that the general rule of thumb was you could listen in to about anything, you just couldn't discuss it with anyone. It's the old "Intercepted Transmissions" bit. Given that, the snitch above could have gone to the poley himself. And the FCC has been known to do some ODD things. Come 'n' get me. KABL4572. -Rod-

Brian,

Bad news. RS markets a terrific Win98 program that does all that and more. It's got it's own GUI. Click on "Manual" on the graphic of the 2052, and you're in graphic mode. Among other neat things it also allows Alpha tags, that while they will not show up on the scanner, they will show up on the software, which runs in real time. It's supposed to come as a package deal with a cable but don't bet on it. RS doesn't know their butts from a hole in the ground. Buy a male to female DB9 connector and with the CD, you're set. Or email me. The software was originally written by Pozilla Software. It sure as hell beats messing around with the front panel. Now, speaking of software, do you, or antone else, know anything about computer communications for Police vehicles? The freqs, software to to decode it and display the info, etc? Feel free to email me on that one as well :) Thanks to ALL that responded to my query. Dennis and Jason were especially helpful in email. -Rod-

Dan,

I am really confused here.
You post an article in this newsgroup right?
For what reason, to get feedback from others?
If this is the reason, then why must you reply with such rude and
ignorant remarks. People and just throwing in their two cents, thats
it!! No need to reply to some of these people with those kind of
remarks, more less saying in most of your replies that they are stupid
and don't know what they are talking about.

Whats with that??????

If you don't like the responses you receive, then why waste your time
coming here every day to reply to them????

Give it up and move on.

Wayne

Source record: 79997

Like most, I'm disappointed with the audio of my BC245XLT hand held scanner. I got to thinking that a second, amplified speaker might be the answer. Radio Shack sells a small, amplified speaker which works well plugged into the earphone jack. It, in turn, has it's own jack into which an even better speaker can be attached. This arrangement is not what you'd call "mobile", but if you're scanner sits mostly on your desk, like mine does, this is a cheap, reasonable fix. I don't know the catalog # of this little speaker but it costs around $11.95. It runs on either a 9V battery or 9V DC input. Plug a Radio Shack 4" mobil speaker into the little one and the audio quality is surprisingly loud and good.

All the best.
Tom

Tom:

You can also pump up the audio on the earphone jack by shorting the ground of the earphone jack, to the ground of the antenna jack. They put a resistor in series with the ground of the earphone jack, to lower the audio so you don't blow your ear out when using a headphone.

Has anyone ever seen a side-by-side comparison of the Diamond D130J discone and the Radio Shack discone antenna?

Is one better than the other? I realize they are wide range antennas but does anyone have any experience with both units. I am particulary interested in the aero freqs (both civil and military).

Any feedback is appreciated,

sward

I would think performance would be identical, considering the Radio Shack is
a copy of the Diamond. However, I think the diamond is constructed better,
but then at almost twice the price, it should be!

I'm trying to learn a thing or two about identifying different data streams that I run into while scanning around VHF/UHF bands.
I'm using programs like Spectra Lab's time series function as a makeshift oscilloscope (I know it's no replacement for a scope) so I can look at the waveforms. Unfortunately, I'm still in the stage where I'm not even sure what questions I should be asking, but one that's been puzzling me for some time is this:

How can I visually tell the difference between an FSK signal and a PSK signal or any other type?

Also, I've looked at the spectrum display 0-10000Hz for a stream that I assume is 1200bps pocsag but I only see one peak at ~2000Hz. Shouldn't I be seeing *TWO* peaks separated by 4kHz? When I look at 6000Hz, I don't see the second peak.

What am I doing wrong?

Percon's is probably as good as you're going to find. The FCC themselves rely on Percon's database CD-ROM's!

I think Grove stopped producing his. Police Call had a few problems, at least with the first release of there's. I understand they have a new one out now, but I haven't tried it.

This is a "stock" Uniden Madison SSB Base rig, it has large external speaker with "Madison" on it, a large digital clock, and comes with a Turner Power Desk Mike. Unit has been packed away for the last 7 years. Perfect working order, some dirt on case top.

$185 plus shipping or will trade for BC895XLT Scanner w/pc cable.

Actually, they spent too much money.
Just get some alarm warning stickers from someone who installs
security systems and slap them on your doors and windows.
Who is going to know that you dont have a system installed?
Also, if your town requires you to post permit stickers, get the
application and see if you can get the permit without providing proof
of a system.

It's 118.3 - Teterboro is 119.5. A few more you might want to
try: Emergency - 121.5, 243.0 Ground Control - 121.6 to 121.9 (every
.05) Search & Rescue - 123.1, 138.45, 138.75, 237.9 Continental
Airlines - 129.925, 130.525, 130.9, 131.05 Good Luck!

I thought this thread had run it's course, but Oh, this one was just
too juicy to pass up... 8)

>Dan,
>
>I am really confused here.

At least you are honest.

>You post an article in this newsgroup right?

Yep.

>For what reason, to get feedback from others?

No, to voice an opinion and hopefully spark dialogue other then ,
"Mackey is a looser, etc." If spirirted dialogue in a free and open
exchange of ideas is feedback to you, then I change my answer to YES.

>If this is the reason, then why must you reply with such rude and
>ignorant remarks.

Was that a statement or a question?

I challenge you to give one example of where I was rude and ignorant,
since you apparently read and understood all my responses, this should
not be too hard.

> People and just throwing in their two cents, thats
>it!!

No problem with people's two cents.

>No need to reply to some of these people with those kind of
>remarks, more less saying in most of your replies that they are stupid
>and don't know what they are talking about.

Hmm, again, I challenge you to show examples of "those remarks". Show
me one example of where I called someone stupid. If I IMPLIED they
were stupid, thats different. As they say.."if the shoe fits..."
To the contrary, many who responded were quite rude to me for NO
reason, other then they did not agree with my position.

>Whats with that??????
>
With what?

>If you don't like the responses you receive, then why waste your time
>coming here every day to reply to them????
>
Actually, I love coming here every day and reviewing free speech at
work. I do not reply to "them", I reply where I deem necessary which
is my right.

>Give it up and move on.
>

It is pretty simple. The two digit display makes it a pain to program and operate. Just hit manual until it is on the channel you want to program, then punch in the frequency, then hit enter. Hit manual to go to the next channel.

That law DOES outlaw such receivers. Hams and peace officers are exempt.

This is the very law that caused me to become a ham over 20 years ago.

Please see 750.508 (a).

check out:
http://www.ilg.de

FREE database for download.
If you do use it for your hobby only, request access with your
own password.
I got mine after a few hours after sending my request more than
one year back.....
Depends on local time (in germany) and Bernd's time available, to
answer requests.

No automatic response.
All requests are processed personally by Bernd.
So when he is on a vacation trip you may have to wait until he's
back ..... :-)

regards,

I'm just curius.....

Was that sold under Stabo mark or "real" yupiteru? if its black cased
and Yupiteru MVT-9000 and serial number first three digits are lower
than 812xxxxxx its so called old version what is no longer made.

New one is Silver cased and start serial number 812xxxxx.
difference between Mk2 and "old" model is noticeable in performance.
Actually that Modification have biggest effect for Mk2 model (i mean
bandercom famous mod for MVT-9000).

I own my self 7 pc's of MVT-9000 and couple other scanners so i had
chance to comparare different versions of those (surprice, its my
favorite handheld scanner =)

Yes, its easiest to amplify signals in lower frequency with reasonable
SiNad ratio and good phase linearity.

> An image would be 910 Khz from the desired signal. At MW

Filtering is also very difficult to made with reasonable selectivity.

Yes.

> Generally most of the gain, and almost all of the selectivity in the
> receiver will be in the last IF, along with the detectors
> (FM,AM,SSB,Synchronous)..

Actually last IF filtering selectivity have near bandpass, like nearest
50KHz around last IF bandpass.
Other IF's made stopband attenuating ect.

> In order to have reasonable Image rejection at all on HF and VHF, two
> intermediate frequencies are usually required.

> converted. Often it is around 40Mhz, but it doesn't have to be.
> Usually there is band pass filtering here to make sure that images
> cannot get through to the next stage (which is typically 455Khz).

All modern receivers have that bandpass filtering in frond end, cause
other wise IMD and phenoms like that become problem.

> It doesn't take a lot of bandpass filtering to reject even a VHF
> signal 80Mhz away. Many scanners have triple conversion, which puts
> the images even further away, often several hundred Mhz away.

Exsample Yupiteru MVT-9000 what i'm familiar with, have 3 IF's.
First is 765.5MHz or 254.5MHz depend freqency range. (SAW filters)
Second IF is 44.185Mhz (cascaded crustal filters)
Third IF is 455KHz and there is different filter's for differend widht
for each mode like AM/NAM/SSB/CW/FM.
WFM have third IF in 10.7MHz (surprice)

> Unfortunately none of these methods are very effective in low priced
> DC-light scanners because most of them have absolutely NO bandpass

> from the real receivers like the IC-8500 and IC-9000. I think I
> counted more than a dozen bandpass filters up front in the 8500
> schematic.

Disagree strongly!!!!

All wide band scanners what i have, have bandpass filtering!!
MVT-9000, AR-8000, AR-8200, MVT-7300, 7100, 7000, UBC-9000, UBC-3000
ect.

Exsample Yupiteru MVT-9000 have 10 bandpass filters for differend bands.
In HF band Yupi have 3 different bandpass!
(AR-8200 have "only" 7 filters total)

But image rejection is not problem in those!!!!! (IMD ect can be and
stopband attenuation)
If you calculate exsample that Yupi's first IF image, its quite far from
received freqency.

Well, there is also other "real" receivers than IC-8500 or IC-9000.
How about Rohde&Schwarz???

> So in a triple Conversion receiver, the first oscillator will produce
> an IF frequency often in the range of 200Mhz, so any image will be

> to speak) will convert down to 455Khz, where most of the passband
> filtering will take place, and everything except FM will be detected

> (narrow band FM, AM,SSB,CW etc).

Uniden have lowest first IF's.
308/254MHz, 2nd IF 58MHz, 3rd is 455KHz.
Yupi have those first IF's like i mentined above, 2nd IF in 44.185MHz
(bandscope funtion have own 2nd and 3rd IF's with own filtering) and 3rd
IF is that most common 455KHz.

Mainly all modern wideband scanners have 2nd IF around 40-60Mhz and 3rd
IF 455KHz.

If you know _any_ wideband scanner without front end bandpass filtering?
let me know!!

> On some HF receivers, the 3rd IF will be at 50Khz. It is fairly easy
> to produce low loss, filters with good shape factors at 50Khz.

then that IF filtering is made DSP ect technology.

> Only after detection do you get audio.

Yes.... =)

Hi All,

Philosophical (sp?) question for the group. I have a RS Pro 89 scanner (no trunk tracking). I follow the 800 mhz trunked frequencies (10) that my local township and county share for all police, fire, EMS and utility work. I seem to be able to follow most conversations just fine. What would a trunk tracking receiver do for me that my current scanner does not?

Why do you suppose that is?

For years, the FCC has used vendors such as Percon, ATI, and others to compile their data. Percon was merely the lowest cost/highest revenue vendor for the contract periods they held the contract.

If YOU were the lowest price/highest revenue vendor, then they would use you instead of percon.

While this is correct, you can obtain a permit from the Michigan State Police, that allows you to not only have, but actually use, a police scanner in your car, even programmed for police frequencies! It is available for the asking, by filling out a simple one page request, available from the Michigan State Police. You do not have to be a HAM either. In fact, if you are a HAM, you can not obtain this permit. Licensed HAM's do not need the permit.

I received mine about three weeks after sending it in. It's good for three years.

>
> Yes.

Many cheapies use 450 or 460khz filters on the last IF stage. So
there is no chance to upgrade to some GOOD filters without
changing a LOT.
This had happened on the PCR1000 too... So there was NO chance
on a filter upgrade .... :-(((

In many cases there is triple conversion on the narrow modes
only, using a 455 or 450 khz IF.
In most cases the wide-FM is double conversion only, using the
10.7 Mhz IF, wich is the 2nd IF to the 3rd too.

> for each mode like AM/NAM/SSB/CW/FM.
> WFM have third IF in 10.7MHz (surprice)

No, not surprising.
The bandwidth on WFM is 150 to 230 khz.for FM- broadcasts and
TV-sound
reception.
They are not to realize with acceptable shape factor on a 455khz
IF .
So there is the question if the MVT9000 is a true tirple
conversion on WFM too or if it simply uses a 10.7 Mhz if as 2nd
stage instead of the 44.185 Mhz... ??

There is a bandwidth of 30 or 50 khz also available on some
scanners, (used for reception on weather satellites for example)
wich is (normally) realized with 10.7Mhz filters.
455 khz IF-filters with bandwidth above 20 khz are rarely used
and very
uncommon.

NO !!
Have a look into some commercial equipment from Siemens or
Harris......
They have discrete IF-filters on the last stage working below
50khz.. !!

> > Only after detection do you get audio.
>
> Yes.... =)

unfortunately I have to agree too ;-))

These are 2 very good examples of you being rude and ignorant.
Don't bother posting a reply to this message because you are a lost
cause, and you're not worth my time! I unlike you, have better things to
do!

Wayne

>I guess I don't understand.

Hmmm, well, with a name like Rambo, I am not surprised.

>You say: "I thought a home run for the dealer, as this was an
automated
>sale, instant, no fuss, no muss, shoot it out and make a few bucks".

Meaning...they didn't have to talk to me on the phone, talk about the
radio, what it does,
how it works, and on and on, then take take all the info over the
phone.

>and then complain that you don't get the 'extra mile' service? what
about
>recognizing you were getting rock bottom prices because it was no
fuss, no
>muss, shoot it out ????
>
What is "extra mile" about having something shipped via USPS Priority
Mail? Explain.

>You want to pay the absolute lowest and then demand service the rest
of us
>pay for by buying retail.

OK, then Rambo...and you pay the absolute HIGHEST price for your stuff?
What in
heaven's name does having something shippied USPS have to do with
"services" you
get a retail? SHheeeesh.

>let me guess - you a Democrat!

Oh brother.....this person really is a moron.

>I think you SHOULD open up your own business and learn a little. Try
>selling at razor thin margins and find one or two assholes burn you
through
>a mail order sales scam (PO Box & next day Alert!!!!) can cripple

your cash
>flow.

Do you know what sarcasm is? Tongue in cheek?

>you want service, pay for it.
>
I offered to pay the additional costs necessary to have it shipped the
way I wanted, and
they refused.

>and, FWIW, I much prefer USPS priority too. It is a lot better than
UPS.
>
Well, the ONE thing we agree on....

Rebel Radio
http://www.rebel-radio.net

More then just another pretty scanner page, Rebel Radio also features interesting news, articles, reviews, and links to all avenues of radio communication, satellite communication, telecommunication, surveillance, anti-surveillance, and more.

Still in our infant stage, and under constant contruction, you are invited to follow the progress of perhaps the most dangerious scanner page on the web.

I have the following receiver and transceiver for sale.

1 - Uniden Bearcat BC200XLT (unmodified) with charger, good battery and UNIDEN belt case. 9/10 condition, just normal wear. No manual. Asking $150

1 - FT-50R with box, battery, clip, antenna, FTT-12 keypad (voice recorder option) Like new condition. Asking $225 plus shipping

Photos upon request

Harry,

Thanks for making people aware of issues regarding Southern California's Fire Departments. FWIW: there will be at least a half-dozen more articles appearing in local newspapers (especially the LA Times) in the next 4-5 weeks. Local television seems to want to wait for the October ratings period (aka "sweeps") to do their *exclusive* investigative reports.

People should take the information at the price they pay for it! $0.25 <grin>

Stay Safe!

Yes, frequencies MUST be programmed in the appropriate order. This
will often require you to leave some channels blank. Me sure you've
got a good list and then enter the freq's in ED mode and all should
work fine.

Save you the trouble of having to scan through frequencies to follow a conversation. It's possible to follow conversations on small systems without a TT but still more work than should be necessary.

Source record: 79969

OK Now before all you Software Police Warlords out there start bitching about just buy the damn thing, hear me out. I just spent $270 on a new scanner that seems to have its fair share of issues, and the way I've been hearing to correct some of these issues is to have the software. Well I've got to hand it to GRE and Radio Shack on this SCAM they are running. "Come buy our scanner, it has problems and now were going to charge you an additional $70 so you can fix the problems" Geeze you'd swear they did this on purpose just to stuff it to all the scannists out there. So anyway, if someone out there would like to send a copy of it please do, and to all that want to piss, moan and complain about me asking for a copy go cry to someone who actually gives a damn!!!

A friend of mine inquired to ICOM about the R3 at the last Hamfest (Labor Day Weekend) I attended.
He was told the FCC is holding back certification on the unit (release due in November) and ICOM also said that it is making some final tweaking to allow it to recieve the 2.4GHz cameras. Seems they found a bandwidth problem with recieving those signals. Over the air TV broadcast reception seemed to be functional though. The ICOM booth did not even have one to Demo unlike the Dayton Hamfest in May.
It did have a good crisp display when I looked it over but since there is no keyboard most of your programming will have to be done via computer interface.

Funny you mentioned that. I did just that except it says "surveilance"
(sp?)
instead of just monitoring.

I suspect that might work as well. When we get cable internet, I am
going to
put a camera up so I can see what is going on in the house should the
alarm
ever phone me.

Bruce

Adam -

I'm glad you got some informativge answers to your questions about amateur radio. When I was first licensed in the 1950s it was a gentleman's world and everyone (well, almost everyone) was polite, considerate, and helpful to newcomers. That has obviously changed over the past few decades. Your best strategy is to ignore the impolite and unpleasant people. You will probably be able to find an amateur radio club somewhere close to you where you will meet very friendly and helpful people.

Someone sugested checking out http://www.arrl.org. It's an excellent suggestion because you can find information about clubs and hamfests (ham radio fleamarkets) there. A big hamfest is very interesting - you will find every type of radio gear there as well as many other interesting items.

Ham radio is lots of fun and you can learn a great deal from it.

Here's a picky point; it's called either amateur radio or ham radio. No caps on "ham".

73 (best regards),

Dave K9SW

From: Wayne Farmer <WayneOHere@compuserve.com>
Message-ID: <8perqh$43u$1@sshuraab-i-1.production.compuserve.com>
Source record: 79978

If only one conversation is using the trunked system when you're scanning it, you'll have no problem; you'll always be able to scan through the unused channels to find the other side of the conversation when one side stops speaking.

The problem comes when many conversations are using a trunked system. Then your scanning will stop on somebody else's conversation instead of the one you wanted to listen to. You can bang the "scan" key again until you think you've found the conversation you wanted, but that's a pain.

A trunk-tracking receiver will: (1) allow you to lock onto a particular conversation and follow both sides are they are repeatedly reassigned to new frequencies; (2) identify by numeric ID the group of users that are transmitting at any particular time, e.g. tell you that Anytown EMS is now transmitting; [some trunk trackers will let you associate alphanumeric ID's with those numeric ID's, so that "Anytown EMS" appears on your display; (3) allow you to dial into a particular service or group of services that uses the trunked system, and hear just their calls; e.g. only police calls for a particular city.

Hi All,

This is old news but I thought maybe another confirmation might be a good thing. The Thunderbirds were in town yesterday and today. Plane to plane chatter was indeed on 141.850. I found that the communications were very lower power and sight to sight was basically needed to get a legible transmission. I was able to turn up my 2052 and watch some of the show out my front window. It was kind of neat to hear the leader and watch the formations at the same time. I also listened to the airport police and local PD in the area as well. That's another story. I did not however find the military police on the air base. Any help out there? Thanks! -Rod-

>gives a damn!!!

Hey... we got to hear you piss & moan about having to BUY the software...
like any of us gave a damn.

The truth of the matter is.... most of the software out there isn't written
by GRE or Radioshack... They don't get one thin dime from it. They develop the
hardware and leave it open (well sort of) for others to create software. The
guy that writes this stuff deserves any of the money he gets.... if it was SO
EASY... everyone would just write their own... but it isn't...
there is many man hours writing, testing, re-writing ... testing... you get
the idea.

The whole "SCAM" idea you posted was a complete waste of time to write and
read. since any of us with software know... most was written by third party
developers.

So why should someone spend $70 for the software and give it to you for free?
There is enough DEMO versions out there if you REALLY want to TRY it before
buying....

You know... you made the choice of what scanner to buy and to get into this
hobby in the first place.... then WE get to hear YOU whine about your $270
scanner and some $70 software...
$340 !!! gee.. you got off REAL CHEAP

A good move, although it should have been done 25 years ago
in the USA. It's really too late anyway. The damage is already
done. There are few, if any, 20 and younger people interested in
ham radio. What young person today, apart from the offspring
of hams, are interested in a ham licence? Really, ask yourself this
question, HONESTLY, and put aside the pre-programmed obsolete
mantra that ham radio is some kind of a vital and technologically
active endeavor in 2000. Put a fully equipped Pentium-III MMX system
next to an Icom and what do you think the majority of the young people
will choose to play with in the Year 2000 and beyond...??

Answer the question...be honest now ! (if you said ham radio, I wish you
luck)

.....IMHO.. IF your talking Amateur (or SWL) receivers vs. transceivers....
I'd say they're both in the same league (assuming you're not comparing
apples and oranges and compare rigs with comparable features). The
electronics inside and circuit designs are the basically the same if you're
comparing a transceiver vs. a receive-only rig (similar class rigs) from the
same manufacturer. From what I've seen of the Amateur transceiver market
vs. the SWL receiver-only market, you pay NEARLY the same (usually less than
a 20% difference) for either comparable product.... so WHY NOT get the
transceiver?

Honest answer: you are right. But what has that got to do with CW?
CW requirements only hindered the brain dead CBers that wanted to free band
a little more than they have.

Had nothing to do with radio vs internet. I have 3 kids, all big into
computers. It is insulting to suggest they are too stupid to learn CW.
They did (in 2 days) but just rather be on the net. Give away 'ham'
licenses like CB, you will still have the same lack of interest issue.

so you win. 10-4

The real Damper behind Ham Radio, I see, is the overly restrictive
neighborhood covenants and zoning laws. I remember in the late 70's you
could'nt go several houses without seeing a CB antenna sticking up on
someone chimmney or roof. If CB was introduced today it would never flourish
or even survive like it did then.
Of course you are saying that is CB radio. What about Ham radio? The truth
is the public really does'nt know or care. When they hear that your
unsightly antennna is radiating something they do'nt want to have anything
to do with it. Plus they remember the neighbors that had those ugly antennas
on their roof and came in on their phones and TV. I only see it getting
worse with the FCC now requiring you to be RF compliant with your station.
Does this mean eventually you will have to disclose to your neighbors your
enviromental impact on their property? Will they be able to point and click
on an FCC database one day and see where your ham station is and imagine
those harmful waves enveloping their property?
When the public thinks of radiation they think of a nuclear reactor or that
awful cellular tower that was about to go up down the road until they all
banded together and squashed it. Nevermind the cellphone that they just
talked on all the way home from work.
That is different.....

Is it really necessary for this crap to be on seven usenet sites?
Particularly when this 'official abolishment' comes from a group that does
not set rules. It will come when the ITU acts and it is currently not on
the agenda for the next six years. Don't stand on one leg.

Agreed.

Unless you have an older TX only rig (like the Vikings, etc.) their is no
reason to just purchase a RX only unit.

rf is everywhere and has been our whole lifes, most of joe public hasn't a
clue of their level of exsposure. The thing that gets me is that the
government and big business do what they want - but we end up getting blamed
and made responsible for having a hobby.

A better one is 21-541 $24.99 Pg. 102 of the new catalog. The other one
is 277-1008 $11.99 Pg. 245.

Another freq is 127.775. This and 123.025 are the best ones. 123.025 has alot of pilot to pilot chit chat in the AM so I lock it out alot. Yeah, that day there were a couple of fixed wings orbiting around the 6 helos also!

I don't believe that Ham is any where near dead just because 20 year olds would rather play with computers over a radio.

Perhaps when they get older they may take interest in the hobby. Certainly ham is not for everyone, neither is scanning, shortwave, or astronomy. So what?

I will agree that CW is a total waste of time, and it was a good move to make a no code license. As for the old timer hams still out there, they will never stop defending it, even though they never or next to never use it.

However don't over look the the computer connection to ham, SW, and even astronomy. We all now have the capabilities that only a small hand full of people had 20 years ago. Wonder how much more advanced the next 20 years will be. Perhaps there will be some new prophet of doom making a simular post regarding the death of computers by way of the next big thing. Hard drives, keyboards, and monitors may become just as obsolete as CW. What would hologram virtual memory, and something on the line of the matrix, this could all some day be considered obsolete.

So lets just enjoy what we have for now, and not worry about what may happen or not happen ;)

"the matrix has you Neo"

Ham radio shows its need everytime there is a disaster and
all the "technology" fails. All the phone lines, power lines, TV
cable, etc., get knocked down everytime we have a serious
hurricane in FL. BTW, our local police, fire, and medical all
use an EDACS system, which is computer controlled. If the
central station takes a hit, there will be no communication.
There are plenty of instances across the country where this
has already happened. Our local Ham radio operators
work with local officials to maintain communications. Every
week Ham radio operators participating in disaster preparedness
call in on the net.

It is a real shame CW is now gone. Again, when technology
fails, what are you going to do? With nothing more than a
reflective piece of metal I can communicate with someone
miles away, provided they aren't too technologically advanced!

Yes, technology is wonderful. Many Ham radio operators are
deep into the latest toys, as I am. However, we don't fool
ourselves into thinking it can't all be taken away with 1 storm.
A small, category 1 hurricane (Erin) knocked out power to
18,000 homes for more than 3 days. This was a tiny storm
compared to hurricane Andrew.

Been there, done that.

Robert

None. They're interests lie in getting high, stealing cars, listening to gangsta rap (crap) music, and bringing guns to school to shoot their classmates with.

You have to admit that all that bandwidth available to me as a relatively new Ham means that reliable World Wide QSO's are a viable option now that I'll get no interference locally.

Regarding the P3 and ICOM, the ICOM will be worth considerably more than the P3 in 2020, or indeed within 18 months.

Not that I'm leaning one way or the other, but I have only one ICOM, four Yaesu's and an old Pye. Along with a P3, P2, K62 and a 486DX-4...I must be a nut too!

So run with it...
The local street racers around here use FRS and cellular to dodge the
cops, ham radio would be perfect...all those repeaters are empty at 2am
in the morning. Cough up some spectrum boys.

While you are at it...change the rules to allow rebroadcasting of music
and porno.

For those of you concerned about the State Of Michigan's strict laws concerning having a scanner radio in your car, all you have to do is obtain a permit!

If you are a resident of Michigan, and do not have a serious criminal record, simply call them, and request an application for a permit to have a scanner radio in your automobile.

Call: (517) 336 6240, and ask for a permit.

If you have an Ham license, you are NOT required to obtain a permit, NOR will they issue you one. You do not have to be a licensed Ham radio operator, or member of any organization to obtain a permit. Simply state that it is your hobby, you enjoy listening to it, and that you will not be an ambulance chaser, or interfere in any way with the police, fire, or other services that you hear.

They will mail you the application, and once you return it, you should receive your permit in about 3 to 4 weeks. It is good for 3 years!

5810. HELP!! Optoelectronics Optolink and AOR AR8000 hookup

Newsgroup: rec.radio.scanner
Date: 2000-09-10 23:57:44 UTC
From: king1522@swbell.net
Message-ID: <39bc1e3c.15106230@news.swbell.net>
Source record: 79935

I need information on how to physically connect the Optolink to the AR8000. I haven't done it in years and have lost the instructions. I know the ribbon cable has somewhat strange insertion instructions. Also, does anyone know if a manual existed for the Optolink? If so, where can I find one? Also, anyone have any suggestions for scanning software that interfaces with the Optolink. I used someone's software that had his site in Ft. Worth, TX, but can't remember his name or web address. Any help is appreciated.

That's in ITU3, we're in ITU2. And personally, I think we need to keep the code requirement to keep the idiots off of HF (my definition of idiots is people who run 1500 watts, kerchunk repeaters, don't identify themselfs, and (ahumm), cross-post newsgroups :)).

Yes, I agree. Ham isn't for everyone. But it's certainly not obsolete.
I don't even know half the code, but I won't ever stop defending it. Truth
is, I'll probably never have a single QSO with CW, heck, I'll probably never
even buy a key, but I truely belive that CW is a great way to keep the idiots
off HF......

Actually the BEST security system is the one you install yourself and don't brag about. There are no loose ends to worry about (installers), there is no record or blueprint of the installation other than the one you control and consequently you then have piece of mind in knowing that the thieves don't know a damned thing about your security.....incidently if it's x-10 compatibility there are great web sites dealing with everything x-10 from simple light timers to "voice control", just plug "X-10" into your search engine and enjoy what's out there..... and a lot cheaper than RadioShack....

enjoy

How about "both" as an answer. You seem to think it is a choice between one thing OR the other, computer OR radio. People can, and do, buy both. Computers and radio can exist side by side in the same room, just like it does for most of the people in this newsgroup. Computer users often have other interests outside of the internet, and there is no reason radio cannot be one of those interests.

> Again - it's TOO LATE. Ham Radio will be DEAD
> and FORGOTTEN by 2020. [snip]

Nonsense. People have been running around carrying signs declaring the end of the world for ham radio for years now, and it is not dead yet. Ham radio is evolving, adapting, and finding its place in the changing world. When it does, it will remain just as viable twenty years from now as it is was twenty years ago.

Wow, even if you were lucky enough to hook up with the one in
200 who can read Morse code, how would you know how to aim the
metal and hold it perfectly aimed and still for a dash? How
would you compensate for the rotation of the earth?

Get a laptop, a barbeque grill, a car battery operated refridgerator,
a car battery for your radio, a shortwave radio, and a small generator
(to charge all the batteries). With those items, life after a storm is
no great problem.

I've been through three storms now. After the first (Hugo), I was
well prepared in advance and the other two were almost like a vacation.
I sit around eating steaks and hamburgers, talking on my radio,
listening to music on the SW, and playing computer games on the laptop.
I was having such a good time, I was almost sorry to see things get back
to normal.

New systems are being built all of the time. Just because you haven't doesn't mean you won't. Besides there's very little difference in price between a Trunk Tracking scanner and a non-trunking scanner.

And MANY CB's are modified to add extra channels referred to as
"uppers and lowers." I'm not sure what they are, but about 15 years
ago, a CB shop almost installed them into one of mine by mistake. And
they aren't upper and lower sidebands, because the radio is an SSB
model. (I still have it.) Anybody care to explain to me what they
are? I've always wondered.

Dan

I found it! It is a 95S1 and a very interesting radio. More info at
http://www.wa3key.com/95s1.html. Just make you have the computer and
software to use it.

How much was your friend asking for it?

Dave

Whoa! Cecil, "rotation of the earth"??
You're holding a 1X3 callsign and if it's not a vanity callsign it means you're at General class or above. You should know better.

Even a small mirrored surface will appear bigger and brighter when reflecting adequate sunlight; similar to the way a flashlight shone at you in the dark appears much bigger than the actual lampbulb might suggest. As for someone reading it, they only have to *see* it's being sent-- Search and Rescue can then bring others in to read you, assuming extraction may be prolonged by difficult terrain,etc. Sure, if you couldn't be rescued post-haste you'd expect food,etc. to be dropped. But correctly sent (and read) it could allow other needed supplies as well. Imagine you had a companion with you who was diabetic: Along with food, insulin and syringes could be dropped as well that might save his life while you had to wait for extraction. There are many possible reasons-- imagine your own. Rotation of the earth is a non-issue as any plane low enough to read you would be more troubled by it's motion relative to you, rather than your rotation about the earth's axis.

This leads to the real value of CW: It's the only "language" that can be sent wireless, sound, light, or other uncoventional methods that allows for accurate, remote transmission and reception of data in even the most primitive and hostile enviorments and almost anywhere on earth.

Could you easily invent (make-up) another? Sure, but it would lack CW's international history, acceptence and usage. It simply has no real competition. Is it really necessary to pass a Morse test to use your VOX-capable ICOM for ragchewing with your buddies on the local net? Of course not. But like a lot of other things, from Boy Scout manuals to Mom's knitting skills, it represents a body of knowledge which is valuable in it's own right. It's not something to be thrown into the ash-heap of history lightly.

In 1987, my wife and I spent 5 days in a 3 room real-estate office with 30 other people in Cancun,Mex. when hurricaine Gilbert hit. The head of the NWS at that time classified Gilbert as category 5 (the worst) but said, "That's only because we don't have anything greater than 5 to put it into." 185+mph winds make life real simple, real fast. No, we weren't sending morse<grin>. If you haven't lived through nature as a catastrophe you can have little idea of just how fast all these tech. toys we "need" can just melt away. If I ever again have to worry about survival you can be sure I'll bring a radio before I bring a computer and my old Boy Scout manual rather than " Word 5.0 for Dummies", etc. Think about it.

Respectfully,

Andrew
KG4JBM/AG

As in the states, the cellular band is not legal to listen to (not in Canada), any scanner made there will be blocked for cellular. You could try to import one from another continent or find someone that would be smart enough to unblock yours.

Good luck

Yup, and just a bit of advice to everyone out there - don't go with Radio Shack.. look through ham radio catalogs - you can find scanners that have more features for the same or slightly more than Radio Shack prices!

Please accept my appologies for the erroneous posting, below. I make no excuses. The conversion of the RF signal to audio does NOT count as one of the conversion stages. The low IF is usually about 455 KHz. Please substitute an example of 455 KHz in place of where I specified "audio" in the below explanation of radio conversion schemes. Conversion of a received signal directly to audio is commonly referred to as "direct" conversion.

> Triple conversion means the received signal is converted three times

Forget about Canada they will not export unblocked radios to the States (wimps).

There are two REALLY good companies in the UK,

Bandercom, http://www.bander.com/uk/scanners.htm
Javiation, http://www.javiation.co.uk/

both are equally good and reputable, and both will sell you European unblocked versions, as they are not breaking any laws, you are the "exporter" and assume all responsibilities.

I have ordered from both, received my shippments next day air by Fed Ex from Bandercom with no delay's at customs, received shipment second day UPS from Javiation, with no problems. Don't believe the horror stories about customs confiscating your shippment and hauling you off to jail, it just doesn't happen, unless you try exporting some serious quanity! Believe me when I say customs and our Government has a lot more importain things to worry about then unblocked scanners being purchased by us.

My advice is to call directly by phone to place your order. Bandercom supplies Fed Ex tracking numbers, it's kind of cool watching the progress of your shippment! Javiation doesn't use Fed Ex (pitty), but UPS is just as reliable. Pay the extra for next day or second day air! DO NOT have them ship by parcial as the postal service is the most unreliable, and also the riskiest.

Seriously, the odds are so much in your favor that nothing will happen! And if by chance it does (VERRY RARE), you get a full refund. No jail time.

Best of luck to ya!
Jim

Like the Pro-2052 that radio shack sells for $300 and can be purchased from
Grove Ent. for $253. They also have the pro-92 or 94 what ever it's called;
on sale also.

Tomorrow, around noon, I am going to purchase a computer
based scanner, that will operate off of my laptops.

I prefer 1-1200 Mhz, AM, FM, SSB, etc.

I also prefer if one is still available that has the slicer
built in, or at least a baseband audio output available, or
easily accessable.

I would also prefer one with no gaps, I can provide documentation
to the company selling it to comply with the ECPA.

I am going to buy it based primarily on what YOU folks say is
the best. How about it?f

I fly SAR. I haven't heard of Morse being used in a rescue since I was
a cadet in the early 1970s (and THEN it was a "tale from long ago"). In
fact, the only time I ever saw it used was in the movies.

VORs and VORTACS still ident with code, but even back in the mid 1960s they used a recorded voice. I still remember " . . .Pomona . . .V-O-R . . ." and wondering if the guy ever got bored.

Just for you newbies, that ident changed to ". . .Pomona . . .VORTAC . . ." in about 1968.

My point was (is) I've been using International Morse Code for 48 years and I
cannot read Morse code sent by a hand mirror reflecting the sun. How the heck
are you going to tell me you need help? (I'm not saying a CW transceiver might
not come in handy.)

> Could you easily invent (make-up) another? Sure, but it would lack CW's
> international history, acceptence and usage. It simply has no real competition.

Mirrors, telegraph sounders, and tapping on pipes in Morse code cannot be
read by the great majority of hams so it is virtually useless when used
in that manner. (Flashlights at night and CW transceivers might be useful.)

> ... it represents a
> body of knowledge which is valuable in it's own right. It's not something to be
> thrown into the ash-heap of history lightly.

Neither does it have supernatural powers. The Morse code that hams can read
depends on lengths of audio tones. You are simply not good enough with a
hand mirror to send dits and dahs to me across a couple of miles.

> Think about it. Andrew

Wow, words of wisdom from the hurricane himself. :-)

The Navy used to include a mirror in the aviator's survivor kit. It had an X in the center that you could see through. There was a procedure were you aimed the mirror at the sun and held up the other hand and projected the X on the palm of that hand. I don't remember the exact procedure but you somehow lined up the X in a certain way and then rotated the mirror so you could see the object you are trying to signal and the sunlight would be reflected directly at it. The rotation of the earth would have no effect as long as you kept the alignment unless you signaled until it got dark.

Are there any general guidelines to frequencies used by police (such as those used to monitor interstate speeds) and EMS helis? Do the police planes use the same system as the ground units or do they use aircraft frequencies?

Same for the EMS helis. I live about 3 blocks from a hospital that has a heliport, which is listed at www.airnav.com, but no comm frequencies are listed, just VOR. Who would this heli communicate with when landing and taking off, the local airport?

Any info appreciated.

I've been a coded ham for 48 years and I cannot read code when it is sent
as taps, can you? How do you tell a 'C' from an 'EIE'?

Lemme get this straight, and correct me if I'm wrong ok.

You bought a GRE with problems, and you didn't know it had problems, so like finding this NG occured afterwards, now you are not happy with it, and feel you been ripped off.

Now you want some one to give you the software so you don't have to pay for it.

Is that about right?

This is very nice, Robert, but now re-do it without the dashes.
You cannot send a dash when you are tapping on a pipe. I contend
that most hams cannot read Morse code when it is made up of nothing
except dots, e.g. telegraph sounder code. I know I can't.

How susceptible are X-10 systems to being hacked by someone plugging
an X-10 controller into a patio receptacle? Are the security codes
contained only within the controller unit? Since (as I understand it)
X-10 controllers have only 256 settings, it would seem rather easy to
confuse the system.

You really "blow " me away! <wink>. Maybe it's not that I'm not
good enough to send it, maybe you're just not good enough to read it.
Perhaps if I was sending it visually by reflecting the sunlight off a little
MFJ QRP-"Cub" you could read it better: That's a CW transciever,
I believe-- and mighty primitive to boot too. Heck, if the Russian
submariners had had them they coulda banged on the walls of the sub
with the little things.

I object!

If you follow this link you'll see that at least one Canadian company
will ship to the US.

http://www.dlcwest.com/~dx.comm/scanners.htm

You'll notice that they put the onus for confiscated equipment on the
importer (buyer), but that's the way it should be. After all, it wasn't
some Canadian company that decided that listening to cell phones was a
bad thing!

I'm sure a quick search can find more companies who also ship to the US.

Here in Oklahoma, the OHP aircraft use the base-to-car half of the lowband freq pairs assigned to that particular district with whose units they are working. The base-to-car freq is also used for car-to-car transmissions, so that is the logical way to work. I understand they are adding UHF trunked capability to the aircraft, but I haven't heard that, yet.

MediFlight (and others) use the same frequency to talk to the hospital that the field medical personnel use, in other words, whatever ambulance to hospital channels the particular hospital is equipped with. So monitor the local EMS/paramedic's channels. The helo's around here also have the capability to call on the two primary police mutual aid channels, and the VHF fire mutual aid channel. This is how they do it in my area of central Oklahoma, but it may not hold true elsewhere.

As for aviation comms, that would depend largely on how controlled the airspace is around the hospital. Since medical helicopters operate VFR as a general rule, they would only need to make such transmissions as are required for the particular airspace they are operating in.

Hope this helps,
Mark K5MAR

Actually, I wondered about this too. The answer would be to vary
the spacing between characters and/or the tone. For instance, if you're
banging with a pipe, Y ou bang the end of the pipe to send a dit and the
broad(length) of the pipe to send a dah. How would they receiver know
which is which? A simple S-O-S would be all the clue you needed.

More wisdom from the voice of the hurricaine,

Andrew

Yes can I ever! Do NOT buy it. I have as older ATT 9300 DSS with 40 mW power. I got the 8500 since it has much more power and had trouble..it many times will not connect to the base..it does the beaping thing at you. Sometimes it would conect after the next try, other times it just would not connect after many tries of hitting the button again and again! I took it back and got another one..same thing! I was disgusted and took it back and got a refund. I am glad I kept my trusty old 9300...the 8500 has better range but at least my 9300 works! I got my 2 bad 8500s at Costco too.

I have determined that the best scanner for monitoring my local (Lubbock, TX) EDACS system would be an Ericsson EDACS radio itself. Obtaining one is no problem, I have some leads for some MDX's, Orions, and Rangers. The problem I see is programming it. Various companies offer programming for these radios. What information do I need to have it programmed? I have the system ID, the LCN's, and all the talkgroup info. What else is needed? Any help or input would be appreciated. Again, this is for monitoring puropses ONLY; I'm not even going to have the mic hooked up in order to prevent people from transmitting on it. Thanks

Jeff

5862. Another takeover

Newsgroup: rec.radio.scanner
Date: 2000-09-11 10:37:38 UTC
From: Ray Colvill <rcolvill@es.co.nz>
Message-ID: <8picqr$4hh$1@news.ihug.co.nz>
Source record: 79888

NZSCANNERS has changed from egroups.com to smartgroups.com
to avoid the adverts.Along with a lot of others.

Now our homepage at xoom.com has been taken over by
nbci.com.

The rate off changes is quite boggling.

What is going on.

Why the mad takeover scramble.

Actually, no, they were not. That was either disinformation or an error
on the part of those who reported it.

Did you write letters to your representatives? Did you even call them
up to express your concern? NO? Then you get what you asked for.

I don't like to do this, but I have no choice but to give money to PAC
organizations which represent my causes. Some day, maybe we'll figure
out how to keep big money out of politics. But if we do, it will be
something unknown in the history of the world. I doubt that such a
thing will ever happen in my lifetime.

So if you don't at least tell your representatives what kind of
government you're looking for, you have only yourself to blame when
somebody else comes up with idiotic legislation which makes life
difficult for you.

We think so little of politicians, that it seems ridiculous to expect
them to read minds of constituents; TALK TO YOUR REPRESENTATIVES!

>on sale also.
>

I'm not talking about Pro-anything - I'm talking about Icom, etc... real radio manufacturers.. I've seen scanners that cover .5 mhz - 1200mhz+ for the same price as a trunk tracking or other high end scanner... and with the Radio Shack scanner of the same price, you end up with 29 - 900 (approximately) with breaks in coverage and not mutlimode... looking through the catalogs is definately worth it when shopping for scanners...

Yes, if it is space properly. Same as they use to read it when using telegraph sounders (clicks) instead of a tone.
tap, tap, space, tap, space, tap, tap, space, tap = C
tap, space, tap, tap, space, tap = EIE
Even Boy Scouts used to learn it this way.

Well you would not try or even need to send code with a mirror to signal you needed help. The reason SOS was chosen is because it is easy to recognize the pattern which is in three's. So any signal that comes in three's is considered to be a call of distress, three flashes of light, three gunshots, three bangs on the pipes repeated three times, ect.

I still doubt that I would be able to read it. And exactly how would
the dot/dash function be performed with a mirror?

I still contend that most hams cannot read telegraph Morse code
including myself. All that tapping would sound like a foreign
language compared to dit/dah tones.

And if your life depends on me being good enough to read it you can
probably kiss your donkey goodby.

> Perhaps if I was sending it visually by reflecting the sunlight off a little
> MFJ QRP-"Cub" you could read it better: That's a CW transciever,

No doubt a CW transceiver would be much much better than a mirror
assuming someone who knows CW hears you. I would much rather trust
an unlocked transceiver capable of transmitting CW, SSB, AM, or FM
on all frequencies including the local emergency frequencies.

I just don't believe the average ham can read audio telegraph code
much less visual telegraph code.

So you are depending on someone knowing the above and recognizing that
it is a distress signal? I sure would hate for my life to depend upon
such. My unlocked transceiver will run indefinitely on batteries charged
by solar panels. And yes, I have spares of everything. I don't expect
ever to need CW. IMO, anyone who relies solely on CW to save his life
needs to have his life insurance paid up.

It would be slow and difficult and rather impractical but not impossible to make the flashes one for dit, two quick flashes for dah, but when you are in distress and all you want to do is attract attention you just want a signal of some kind. SOS comes in threes, three letters, three dits and three dahs so three flashes of a mirror, three gunshots, ect. mean I need help.

If there is no tower at your airport then look for UNICOM frequencies in the airband. These are just for planes to talk to other planes in the general area to say " I'll be flying around at 5000 ft over here, don't crash into me..." We have some local small airports that use 122.8 and 122.9.

That said, PD helos will likely be on PD frequencies to radio to the cars. EMS Helos might show up in the business band since their dispatch center is often a private company who contracts to the PD/EMS/Hospital etc.

I have one. What do you want to know.
To program CTCSS, first turn CTCSS on (with the switch on the bottom of the scanner). If you don't have the switch on the bottom of the scanner, you don't have the CTCSS option board installed.
Now go to the channel you want to program
Punch in the freq. then hit Enter. Now punch in the CTCSS Frequency. (If you punch in 0 (zero) it will turn off the CTCSS for that channel)

Did you know that you could step through the frequencies and lock out ones that aren't good in the service search mode? While it is service searching, hit the Priority button and the one to the right of it (sorry scanner is in my car) to step forwards and backwards through the channels that have been pre-programmed into the service search buttons. Hit the lockout button to lock the frequencies out. If you hold down the lockout button for three seconds, they will all unlock. I went through and locked out all of the frequencies except for the local channels, so when I hit the Fire button, it scans about a dozen local channels. Neat trick.

Yes, there is a way to reset the scanner, but I forget what it was.

Great scanner. Love the CTCSS (wish it had DPL, though)

We want to invite all active scanner buffs to MedicDispatch.com. At MedicDispatch.com you will find Live Dispatch channels currently at 4 stations but growing every day.

We are currently in the process of redeveloping our site to encompass all Scanner News, Frequencies around Canada and the US and of course the latest in news.

Our site is geared towards EMS, Police and Fire scanner enthusiasts, but we invite all who are interested to give our site a try. It is currently very under developed, however it will grow every day.

Visit us today @ www.medicdispatch.com

Thank you and we look forward to your visit.

Jason Morris

Have just completed a transaction with Jim Chesney in Ontario Canada.
Transaction was smooth and clean! Item surpassed my expectations!!

I recommend Jim to the very max !!!!

I would like to add my 2 cents to ham radio. I believe there are a lot of good people that would be interested in the hobby including myself if it was not for all that red tape. I got into CB because all I had to do was go to Kmart buy a CB and talk away after hooking it up. Also I do believe it would invite trouble makers like on CB if ham did the same. But also kind people as well, and you will have to take the good with the bad. If I'm having trouble talking to somone because anouther is being rude all I have to do is cut off the rig and give him a call on the phone if its important. Or I can go watch TV or play on the computer. I bet if people had to take a bunch of tests and fill out all kinds of paper work and then wait several weeks to get a permit to talk on the telephone, very few would have them. Anouther thing I would like to say is I read like in the post below about kids not being interested. A lot of complaints I hear is about kids playing with radios. Not on this NG but out in public and on the air waves.

P.S this post is not directed to the post below but to all posts on the subject.

My dream scanner would be as follows.

*Wide band continuous (unblocked) 500kHz to 2054mHz

*Large alpha numerical display

*Bright evenly lit backlight

*All available Trunk systems

*Ability to scan conventional and trunk

*Ability to use Alkaline, Ni-NH, or Lithium

*Decent audio output

*Band Scope

*Computer interface

*Attenuator, NB, AFC

*1000 channels user configurable to user specs (10 banks, 20 banks, etc.), and distribute any combination of channels to banks (20 channels bank 1, 50 channels bank 2, 35 channels bank 3, etc)

*Debugging feature

*All mode, AM/FM/SSB/NAM/NFM/CTCSS/Voice Descambler

*Additional 40 banks for search mode

*Reaction Tune capability for Scout

* 2 VFO's

*A REAL TUNING KNOB!

*Flash card slot(s) for extended memory, upgrades, additional features

*User upgradable firmware capability by computer uploads

*Signal Strength Meter bar codes

*Backlit keys

*Useful Manual

Now wouldn't this be a joy to own and use?!!
It's a mixture of the AR8200 MKII, Alinco DJ-X2, Bearcat BC245 XLT,

Pro-92A!!
Oh, and I almost forgot, the price would be $300 US

Oh well, back to the real world.
Jim

In other words, you just don't want to put forth any effort to obtain something,
you want it given to you.

It's moot since very few people know code.

If you can save your own life and a bunch of other hams,that's cool.

But please don't get upset if I decode not to be rescued. The thought
of spending the rest of my days in a fallout shelter...with a bunch of
procode hams is very disturbing to me.

what...too damn lazy to give people
service as to price and other necessities
for your unwillingness to make their lives
happy, happy. we are not part of your
problem...so post the damn price and all
the other shit so we can all have a good night
sleep in order to decide on buying the
damn thing you claim to have.

this is the creme de creme scanner of it's day. This was
the one. It still is if working. but these units was told go
bad afer about a two year period. then uniden no longer
fixes them am told. I've got a 300 just laying in the
RadioDefunctBox and there with other relics of its day.

as for manual....grove enterprises has them. they sell
manuals.

i've got mine, but have no idea which box the manual
is in....

He was married to the lady that did the I.D.s for XETRA AM 690.
Ekes-aye-terier......Tijuana Mexico".

They had 4 daughters and a son. All went on to the big city of San Diego
doing the half hour ID's for the San Diego Police.

The grandmother is the "Time lady".

The tapping on the hull was decoded....

"Get us the F$%K out of here comrade!"

Maybe they could teach Flipper code. Flipper could tap out a question
from the media by using a coke bottle.

"How Do You Feel."
"Are you bummed that the soviet tv transmitter tower will be fixed long
before we recover your bodies?"

Did some ham really call you "Eieecil" or "Ceeie"?

How do they make those smiley faces with dat dot and dits code?

My friend is a deejay...he decoded some morse code in one of John
Lennon's last songs...
"I love you Yoko"
My friend got on the news for that.

All this talk about dead soviet submariners, code and John Denver made me want to reflect with nature. I took a walk down to a very nice beach in Pacific Grove Ca. John Denver's plane crashed there a few years ago. As I sat on a rock and gazed over the ocean I heard tapping.
tap
tap,tap,tap

On and on it went and then I realized I was hearing morse code. I pulled out this oldclipping from boys life magazine about the cave men and their morse code. It was a little decoder chart.

Tap,tiptapatiptapatptaptaptap.

I then saw the fiesty sea otter swimming on his back with a shellfish on his tummy and a rock in his claw.

"tap tap tapataptaptaptap!!!!!!!!!"

"What Do you want Mr. Otter?" I said.

The otter tapped back.....

"Do you have any cocktail sauce dude?"

Never use a mirror to signal distress. You can blind the rescue pilots.

Three gunshots is safer.

It would allow you to follow conversations and events much more
carefully and closely. Think of it as the difference between a
threaded Usenet news program with posts arranged by newsgroup, time and
date, vs. a newsreader that displays posts from a whole bunch of
different newsgroups haphazardly, randomly and in no particular order.

Or an Email program that leaves out the "From:" "Date:" "Time:"
and "Subject:" headers on all the Emails you receive.

Most RS scanners also seem to have a bit of a problem with scan speed --
in other words, it's slow. No problem if you have say 25-50 channels
programmed, but if it gets up much above that, faster scan speeds
become very important, or you end up hearing more squelch tails than
anything else.

Trouble is, most of the "real" radios you describe lack trunk tracking ability. If police/fire coverage is not desired (or following a conversation carefully is no big deal), no problem, otherwise it might be best to look at a high-end Uniden or something of that nature. I've seen the BC895XLT for under $200 (try www.alfenterprises.com), and the thing actually has a tuning knob and S-meter, among other goodies.

Also, the coverage under 40 MHz tends to stink on "DC to Daylight" receivers, even the most expensive ones. They're just not optimized for the band conditions on HF (shortwave), so reception is lousy and mostly a waste of time (and good luck finding an antenna that covers that wide a range of frequencies well). A good receiver for frequencies under 30 MHz generally covers AM only, and ONLY those frequencies -- and requires an antenna optimized for below 30 MHz coverage.

A good solution if interested in both is to buy a decent shortwave portable like the Sony ICF-SW7600G ($150-$175) plus a scanner which is optimized for FM coverage above 30 MHz. Don't waste money on a radio that covers everything, because they just don't do it well -- usually you're drastically short-changed below 40 MHz.

5933. Some Questions about Trunk Max Pro Software

Newsgroup: rec.radio.scanner
Date: 2000-09-12 10:08:02 UTC
From: A scanner user <bc780master@nospamwhatsoeverthistimeyahoo.com>
Message-ID: <6gnv5.139391$D9.7507071@news.easynews.com>
Source record: 79760
Cross-posted to: alt.radio.scanner,rec.radio.scanner

To Whom It May Concern:

It seems that your software for the Pro-2052 scanner, available for download at http://www.trunkmaxpro.com, is nothing more than an overpriced rip-off (for lack of a better word) of Pozilla Software's WinScanRS, which by the way is sold through Radio Shack stores as a Radio Shack Unlimited product. I am sure that Pozilla Software has worked out an agreement with Radio Shack/Tandy Corp to use their name and the Pro-2052 logo on their software.

So, here I ask you these questions :

Have you done the same (obtained licensing from Radio Shack/Tandy Corp.)? I am sure that the legal department at Tandy Corp. will frown upon unauthorized use of the Radio Shack name, as well as the Pro-2052 logo.

Next, you list on your web site that your software is "As Described" on Strong Signals (http://www.strongsignals.net) and on Grove's (http://www.grove-ent.com) websites. I searched Grove's website, from top to bottom, and I have yet to find word one about TrunkMaxPro. Am I missing something? As far as any mention of the software on Strong Signals, I noticed a listing on the software page and many negative reviews on the message board. Is this what you are referring to?

Does Pozilla Software know that you have, in essence, stolen the very format that they use for interfacing with the scanner? Not that I am against competition, but it seems like there could be some copyright infringement on your behalf.

Next, are you planning on doing the same type of interface for the Uniden scanners? If so, you might want to check with Uniden about copyrights.

I downloaded your demo of the software. Where is the help file or some type of user's manual? How do I print my frequency lists? How do I save multiple frequency lists? When I downloaded information from my scanner, none of my talkgroups downloaded into the program. How do I download talkgroups? What is with the -1's and 0's? What does this mean? Why does the program take up 90% of my screen when I am running in 1024x768 and I am not able to use this program in 800x600?

I have sent a copy of this message to Radio Shack, Grove, Rich Wells, Pozilla Software, Uniden, and a few other people who might be interested in something like this. I have also posted a copy of this letter on Rich Wells' site and to rec.radio.scanner and alt.radio.scanner. I invite you to publicly answer all of the questions I have posed here, and I would hope that you will at least answer my questions privately.

Signed,

A concerned scanner user.

Yeah, man! This is along the lines of the gun registration debate.

You give the government all this info about yourself cuz you trust them. AND "if you're not doing anything wrong, you don't have anything to worry about."

Uh-huh.

If there's ever any problem with criminals listening to police radio, the MI government has a nice "short list" they can go to automatically now. You're an easy suspect they can go to any time whether you're innocent or not.

John Doe wrote:
> ... I believe there are a lot of
> good people that would be interested in the hobby including myself if it was
> not for all that red tape.

The "red tape" is to validate the qualifications, minimum as
they may be. The important thing and one to which I am
comitted is to have the "red tape" (i.e. the test requirements)
be justified and the reduction of code testing to 5 wpm
is but one step towards that aim. The code test will
not likly go away completely until there is a change in the
international treaty. I believe your comment is not intended
as a desire to have NO ham requirements, and I hope you
concur that rational and justifiable requirements (that red
tape) are the reason ham radio is not CB.

>I got into CB because all I had to do was go to
> Kmart buy a CB and talk away after hooking it up.

But hams can actually build, repair and adjust their
own radio equipment which is not something CB oerators
can legally do. Hams are allowed HIGH power (1500
watts) while CB is limited to 4 watts. Those two aspects
justify the need for the red tape.

> Also I do believe it would
> invite trouble makers like on CB if ham did the same. But also kind people
> as well, and you will have to take the good with the bad.

Sorry, I must adamently disagree with that prospect. As much
as I oppose the need for morse code testing, I am equally
committed to NOT turning ham radio into a no test CB type
access.

> If I'm having
> trouble talking to somone because anouther is being rude all I have to do is
> cut off the rig and give him a call on the phone if its important.

Do you have the phone numbers of every ham available? That
points out another major CB vs Ham difference. Ham radio is
global and not limited to short distance rudeness.

> Or I can
> go watch TV or play on the computer. I bet if people had to take a bunch of
> tests and fill out all kinds of paper work and then wait several weeks to

> get a permit to talk on the telephone, very few would have them.

Probably so, but there is NO need for a license to
use the phone because there is NO public need for
anyone to have a license.

Additionally, the phone companies look after
all the problems for which you and I pay
monthly costs and per call usage fees.

Cheers,
Bill K2UNK

Gunner,
Since we are all speculating here... what if the person is running high power and is blasting through his neighbor's TV? You know how cranky folks can get if they can't watch..."So You Want To Be A Bazillionoire". We had asomeone in our neighborhood whose radio was so bad it came through on my son's Electric guitar.
Now that was strange.
Russ
PS
If you are going to play, at least be subtle

And the 11 meter CB band is the perfect example of what happens when no one has to invest any effort in being allowed to operated on the air. Guess you would like the ham bands to become the sewer pit of the air waves that 11 meter is too. He obviously feels that getting a ham license isn't worth the little trouble it takes to study some theory and learn some rules and regulations and be willing to abide by those regulations. It is that "red tape" that separates the ham bands from CB. And yes you can point to some bad operating by hams on the ham bands but that is limited to a few frequencies, but tune ANY of the CB channels and you will find bad operating practices. I am not sure by what you mean the hams don't use *nearly* all of it, the bands sound pretty full to me and so what, it is allocated to the amateur service so if you want to make use of it get off your butt and be willing to put in a little effort and get a license instead of crying because it isn't free. Try stepping out of the welfare mentality for a change.

Return it and buy a legal radio for your use. No, regardless of whether or not you have a license to transmit there, it's not legal to use ham gear outside ham bands. Type Acceptance is required for all other services.

Unless they've changed, the RS ham gear is very deliberately NOT modifiable to transmit anywhere illegal (out of ham band), which allows them to design them to work BETTER in band, with tighter front end filters, etc, making them better against intermod and such.

With your logic in mind you say people should not drive cars if they cant
build one from scratch. Same with ham radios. I guess you could call it lazy
but to me its not worth the trouble.

I believe you can still have the rules with out all that red tape. If I wanted to I could go through all that trouble to get my ticket and still act like an donkey on the air. once they found me then it would be over. But I just dont see how the red tape is going to stop the affenders. What you need is more enforcement. Like maybe let the local police help out when their are complaints, if the FCC does not have the manpower. and Yes the knowledge to tune your own radio would be helpful but their will always be people that will do that for you for a few bucks. As for the telephone yes the phone company would deal with morons. and the gov. would deal with them on the air. and we all know how they love to spend money.

Anyone have some IC-R2 programming software for Windows 2000? The stuff from icom doesn't seem to work, get's about half way downloading then says "Recieve error, try again" and the software on butel.nl finished downloading but when it's complete in says "Device Unavailable" and exits the program. Both programs seem to work fine with my windows 98 laptop and swapping cables from home-made to icom supplied didn't change anything. Thanks!

First I never said anything about requiring anyone to build a radio, but if you are going into a hobby that allows you to do so and put it on the air, you need to pass certain minimum requirements that you have some knowledge of what you are doing. How about not requiring a driver's license or age limit to drive a car, just let anyone go buy a one and get on the road, no testing of highway rules or driving skill. Do you have a driver's license or did you think it just wasn't worth the trouble. If you think the requirements for getting a ham license is not worth it to you, fine, I have no problems with that, but don't whine and cry because it isn't going to be given to you just because you don't want to meet some minimum requirements.

5966. Oakland, CA GE # of Trunks?

Newsgroup: rec.radio.scanner
Date: 2000-09-12 19:49:17 UTC
From: Richard King <rking@dnai.com>
Message-ID: <01c01cf2$769f7940$95a6accf@rking>
Source record: 79793

Can any Northern California residents help me out?

I have three separate lists of trunk frequencies for the GE system used by the City of Oakland. Of the three, the list with the fewest number of trunks "seems" to work best in the BC245XLT, But I still think I may be missing a transmission or two.

The list that works the best is the one I took from the Bearcat guide that came with the unit, but I have two additional regional guides that have additional channels, each varying by a trunk or two.

When I put all the trunks in, the radio is next to useless. Hence the question, does anyone have a current list and sequence order for the Oakland system?

Thank you for your help.

Having a radio go through a guitar amp isn't all that strange. The guitar player in my band (back when I was a wanna-be rock star) had that happen a couple of times. Once was a police car several hundred yards away, came through clear as a bell. The other time I know of was either a cell phone or (more likely) a cordless phone. I forget the brand name, but it was a large tube amp. So it isn't unheard of. By the way, he lived about 400 yards away from me in the middle of nowhere (we were the closest neighbors to each other) and I ran 100 watts at HF, and it never came through his amp. He would have told me if I was, he knew I was a ham.

5969. New PRO 94 A now does 'Simultaneous Trunking'

Newsgroup: rec.radio.scanner
Date: 2000-09-12 20:17:01 UTC
From: Victor Healey <fourphun>
Message-ID: <srt3kfdrct6168@corp.supernews.com>
Source record: 79795

If you had subscribed to 4phun-radio@egroups.com you would now know that what you wrote about the Pro 94 is no longer true. RadioShack has quietly updated the PRO 94 to something called a PRO 94 A on June 27, 2000.

One outstanding characteristic of the new PRO 94 A is that it now does 'Simultaneous Trunking'
And it seems to be better thought out then the BC245 XLT new version!

From the PRO 94 A manual on page 39 it reads ...

SETTING THE SCANNER TO THE TRUNKING MODE

Simultaneous Trunking

The scanner allows you to track up to 10 systems at a time. You can trunk scan or search and scan conven-tional frequencies at the same time. You can also program conventional frequencies in the same bank as trunking systems.

After the scanner is finished checking activity in the trunked system, it scans other conventional frequencies in the bank. (Only trunking frequencies are programmed in trunk mode.)

If a system is inactive for 1 second and there are no conventional channels in the bank, the scanner starts scan-ning the next selected trunk bank. If you turned DELAY on, the scanner starts scanning the next trunk bank after about 5 seconds.

The PRO 94 A has several other nice features that make it a suitable trunking radio scanner compared to the BC 245 XLT. The only downside is that there is still no computer interface to upload frequencies from a PC to the scanner. Still IMHO, many people will not be bothered by that.

The CB got it's reputation from the movies.
Short of some glamour movie with hams tapping away to save the
president; I doubt relaxed rules would cause a mass exodus to ham bands.
It just won't happen.

You have semi controlled access to you repeaters, you can police that
can't you? The cost of gear is enough to keep most lowlifes from the cb
away.

The vast majority of those in the professional communications business
are starting to view hams as spectrum hogs.

> I believe you can still have the rules with out all that red tape.

I must still disagree as the range of permitted aspects of amateur radio transend the possibility of a "no license" approach. High power, build your own equipment, etc. all demand more than just a "mail in your name/address" approach to licensing.

> If I wanted to I could go through all that trouble to
> get my ticket and still act like an donkey on the air.

Yes you could, but that doesn't happen anywhere near as much as can be found in a no license arrangement.

> once they found me then it would be over. But I
> just dont see how the red tape is going to stop the affenders.

It matters not IF it does or why it does. The reality is that on a comparitive basis, amateur radio (a licensed and tested service) has far less rule breakers than does CB radio. So it isn't a matter of debating IF licneses and license testing will stop offenders, it is absolutely the case that it does. Is it 100% perfect? Not at all, but it has a far better track record than CB does.

> What you need is more enforcement.

The FCC already lives with their CB nightmare as to rules enforcement and has pretty much abondoned enforcement except in the most egregious (sp?) cases...usually of interference. Ham radio has its own (small) group of offenders, but they are much easier to find and reel in by the FCC.

> Like maybe let the local police help out when their are
> complaints, if the FCC does not have the manpower.

The LAST people you want enforcing radio rules is your local police. The local police have ZERO knowledge of such enforcement and they have no real interest in getting involved anyway...(far more glory in solving homicides and drug busts than radio interference complaints).

> and Yes the knowledge to
> tune your own radio would be helpful
> but their will always be people that
> will do that for you for a few bucks.

The fact remains that hams are allowed to make
those adjustments themselves and that is one
reason for testing. No testing, no allowed use
of self tuned equipment. What you are proposing
is a different type of service. Perhaps you
should try GMRS, FRS, etc.

> As for the telephone yes the phone
> company would deal with morons. and the gov.
> would deal with them on the
> air. and we all know how they love to spend money.

If THEY means the FCC, the fact remains that
the FCC has a limited budget and ham radio
generates NO government revenue to pay for
any enforcement.

Make sure your COM ports are setup in CMOS/BIOS with their true address, and IRQ's! Plug'n'Play automatic settings can confuse DOS programs. If that doesn't help, try disabling the FiFo buffering on your COM port in Win2k...see if that helps.

ARC2 will support NT4 and NT2000 soon. The problems with NT4 are fixed and
we will release a new version within 2 weeks that supports NT4. NT2000 will
be supported soon but requires more testing over here.
The problem you reported looks simular to the problems that were reported
under NT4.

Win.ME should be no problem with current version, according to one of our
reg.users but for the moment we do not support ME until we checked it
ourselves.

Exodus from where? If you mean from CB, as soon as the word's
out about repeaters and genuinely useful coverage areas
vs. CB's pathetic range, you'd better bet there would be a mass exodus
from CB to ham radio. You can only hope it would be the better half of the CB'ers
fleeing the bottom half. As it stands, written tests keep out *some* of the lazy
and stupid ones who might otherwise get in.

>

You try "enforcement" sometime. Local and state authorities are
(properly) not interested in matters like this which are
totally outside their jurisdiction anyways. The police (should) have way
more important problems than annoyed hams to cope with.

That leaves the feds, and basically this means the FCC.
The FCC takes literally years
to act against jammers and bootleggers, even when there are extensive
tapes and direction-finding evidence gathered by hams to catch the
miscreant. I know of one rare case
where a jammer in this area actually was convicted and did prison time,
but the case against him -- and his jamming -- went on for years. Last I've

heard he's out and back to old tricks.

It all started with a *borrowed* radio, with which he caused an unbelievable amount
of trouble (even hampering firefighting efforts during the big Oakland hills fire that claimed so many lives and homes). Another repeater jammer who also liked to interfere with air traffic transmissions, got time, if I remember correctly.
But for jamming repeaters -- you get away with it for years. :(

Besides, just because someone's a lowlife doesn't mean they don't have money. Look at Shrub Jr. Besides, there's a lot of ham gear stolen every year. Some of it surely ends up being used, and not by licensed amateurs, either. Some people refer to "CB" as Criminal Band. From listening on occasion with my HF receiver, it's criminal they don't shut down the band and set up all arc welders to operate on those frequencies.

The only way ham radio is going to be able to cope with relaxed rules is with a technological solution which can "lock out" certain users or transmitters once they start to abuse the bands.

-- Ross

>
> The vast majority of those in the professional communications business
> are starting to view hams as spectrum hogs.

That's funny. I would think dedicated frequency assignments for a local school or other very-low-traffic user would be at *least* as wasteful, yet you see that all the time where trunking isn't used.

This is exactly what the BC 245XLT does, and is worded the same in the 245
manual.
Compare this, and the other features of the 245, plus computer link, AND the
low price of the BC 245XLT ($209),
the pro-94A is still way over priced! If they drop the price of the 94 to
around $179 ir would be a good buy, otherwise why pay almost $100 more for
the 94 when the 245 is cheaper AND better???

UHF CB aka GMRS never turned into a cesspool. FRS has shot a short range
that interference between users is short lived. I agree that 27mhz is
garbage.

The bottom line is the spectrum is now worth big money. You can easly
lopp off 2/3rd's YES 2/3rd's of the ham spectrum and not greatly impact
the current users. The FCC knows the hams will comply if told to leave
so it would be a slammdunk.

Hams need to justify the holding of all that spectrum. Forget the code
b.s...they want your main resources...spectrum.

better get orginized folks cause the boogy man is coming and Rielly H.
won't be able to help you.

Cool.

I was a cadet in CAWG about 25 - 28 years ago, was away from CAP for a couple of decades (active with other agencies), then came back in in AZWG in 1994. Currently in Utah, not active while I get things shuffled around, soon back with it.

if it controls the TX frequency, it is. Understand here that I've played
loose and fast with the rules myself...I'm not endorsing them, just
discussing them.

5986. Pro 26 Scanner Javiation chip for sale

Newsgroup: rec.radio.scanner
Date: 2000-09-13 00:00:00 UTC
From: Adam Conrad <aconrad@mindspring.com>
Message-ID: <1yRv5.1891$UI3.170145@paloalto-snr1.gtei.net>
Source record: 79648

I sold the scanner without ever installing the chip. The chip would have to be installed by a tech, who can work with very small soldering.

The way I understand it, the chip converts the unit over to EURO specs, meaning that it will make the scanner pickup cell in the 869-890 region instead of the downcoverted (modified units) 369-390 area it picks it up now. Basically a EURO scanner gives you up to 1.3GHZ with no gaps in coverage at all.

This item costs $75 new, offers?

Regards,
Adam Conrad

5987. Hamilton Twp. NJ Channel 2?

Hi All,
Does anyone have channel 2 for Hamilton NJ PD?

The main Frq is 453.525
The old channel 2 was 453.425, but they're not using it as channel 2
anymore.
The third channel I have for them is 460.450, but that's not used either.

Thanks,
- HW

Nobody is cross posting your posts, you are doing it yourself. It is obvious
you don't know how Usenet newsgroups work. Here I'll paste in the header and
you can see for yourself which newsgroups you are posting to. Notice the last
lines where it says Newsgroups followed by the groups you are posting to.

> yes I can understand the need for some red tape now.

What safety aspect. You're not really gonna go *there* are you?

Chainsaws, electric hair dryers, microwave ovens, golf clubs etc....

Look, there was a valid reason in the past for testing and code. The
hams were the kinda of the "rescue rangers" of the airwaves. Now there
are plenty of non hams on non ham frequencies that do what hams have
done. You don't need hams to make skywarn work. If you dropped some red
tape you might be suprised at the quality of volunteers you get to help
out with club projects.

jus about nobody builds a radio from scratch, most folks can grasp the
concepts of buttons and readouts and most will learn not to place their
tounges on the center antenna conductor while transmitting.

Cut red tape...
Get some new members fast...
Of start loosing spectrum.

You have to please "da man" or else...

All you need is a Ham radio license, and you can have a scanner in your car
in ANY state, including Michigan. Study guides are available at Radio
Shack, simple multiple choice test is easy to pass, and the no-code license
does not require you to know morse code.

5995. Real Audio Problem w/ live scanners

Newsgroup: rec.radio.scanner
Date: 2000-09-13 00:00:00 UTC
From: oper911@aol.com
Message-ID: <20000913192942.25835.00000165@ng-fd1.aol.com>
Source record: 79657

Can anyone help? I try to use Real Audio to listen to the numerous live scanners that are available. Problem is, I may have lost an "important" file.

In the past month, every time I try to connect to a site, it tells me Bad address/link, etc.....I then try the SAME site using windows player, etc, and it
goes thru. I have downloaded the real player again, and still the same prob.

Did I loose something in the windows program, or why cant I connect with real audio. I know these sites work, 'cause I used them before. Any easy remedy would be very much appreciated!

Of course it depends on what are you live in. As far as I know, there are no agencies using trunking here in RI.. as a matter of fact all local agencies transmit in the 150 - 160 mhz range...

I would like to say that you made a good reply. For the safety aspect of it
yes I can understand the need for some red tape now. As the others said for
keeping the morons out I still dissagree.

Take care,

Hello everybody,

I've got this old PALCOM BlackJagur MK200III scanner
and I'm desperately looking for a modification to make this unit receive
the cellular band (40MHZ)
This is a rather old unit with a 7925PLL any hints?
I kept searching the net for hours ... no results so far.
Thanks in advance,
Andreas

I ain't Gunner but here goes my take on it:

You follow the instructions on the FCC website for filing a complaint.
Normally, the only way you're gonna get the cops involved in that one is
if you escalate it into a disturbance. They might try to talk to both of
you to keep it from going that far, but they'd have no way of knowing if
the guy was running high power or not, if he was legally licensed to run
high power or not, or if your equipment was faulty or not which is the
cause of the majority of interference problems.

Posted by Dwayne Lewis on September 12, 2000 at 21:55:36:

First $400.00(Firm) takes it all. Please respond to my email. (annamal01@cs.com) Money order or cashiers check only. I have excellent ebay references which I have included a link to below. Following is a description of this awesome setup.

http://cgi2.ebay.com/aw-cgi/eBayISAPI.dll?ViewFeedback&userid=annamal01@cs.com

Pro 2035 Scanner with a Full Version Optoelectronics OptoScan 535 computer controlled interface. The scanner is in flawless condition. You will not be disappointed. The os535 accepts the cellular unlock code which will be provided. I will include some demo software for the os535. All manuals for the scanner and opto board are included along with the telescopic antenna for the scanner. This setup works fantastic.

DESCRIPTION OF SCANNER: The Radio Shack PRO-2035 1000-Channel Programmable Home Scanner lets you in on all the action! With its convenient rotary tuner and keypad, you can quickly tune to over 196,000 frequencies (within the ranges of 25-1300 MHz) that include those used by police and fire departments, ambulance services, aircraft communications, amateur radio services, transportation services, Citizen's Band and commercial FM and television broadcasters. You can select up to 1,000 channels to scan and you can change your selections at any time. The secret to the scanner's ability to scan so many frequencies is its custom-designed microprocessor - a tiny, built-in computer. Special features. Hyperscan - lets you scan up to 50 channels per second (80 channels per second w/OptoScan 535) Weather Band Key - scans ten preprogrammed weather frequencies. Ten Channel-Storage Banks - you can store 100 channels in each bank (Unlimited with OptoScan 535).

DESCRIPTION OF OPTOSCAN 535: The OptoScan535 is a computer interface board designed to fit into the Radio Shack Pro 2035/42 receivers. The OptoScan 535 allows for complete computer control of the receiver. It will not only tune the radio, but increase the scanning speed up to 80 channels per second (depending on software used), while decoding CTCSS, DCS, and DTMF. With the OptoScan 535 the number of channels and banks are virtually unlimited.

Yes, this one gets it all.

Thanks!

Dwayne Lewis

What red tape?? A 35 question test with multiple guess answers, all of which is published and available for free?? The bulk of the red tape entails filling out a form requiring your name and address. What sort of numbskull are you anyway?

The license requirement is not 'red tape," John. The exam you take to get that license is designed to insure that you have the basic knowledge to operate a radio safely and that you know the rules concerning that radio operation. The license is proof that you have taken that exam.

This differs from CB because the ham radio service differs from CB. Unlike CB, the ham radio service involves the possibility of very high powered radio equipment, a wider range of technologies (repeaters, satellite, digital modes, microwaves, etc.), a wider range of frequencies and frequency conditions, and a stated mandate of providing emergency communications in time of need.

It is also for these very reasons that rule enforcement is much stronger in the ham radio service.

Of course... and since we are speculating... a hypothetical neighbor of an imaginary fellow whom looked a lot like me was this type of person. Lots and Lots of power... no manners, no couth, no brains. After several nights where this imaginary neibor put the mic on vox. and turned up the tv... it was discovered that when a handfull of finishing nails get hammered into RG8 coax while the imaginary owner of said coax was on a beer run... and then returns home to do some more impolite stuff using LOTS of power.. the radio tends to let out all the smoke packed into the components. And continued to do so for some time.. each time the IN (imaginary neighbor) would find a nail and remove it.. and then key up again.... Seems the IN was not bright enough to use an ohm meter to check for shorts. Finally realizing it was a coax problem.. he then replaced it. When his nonsense started up again.. it was found that the smoke comes out just as well when the coax is clipped in half about 20ft up the tower, then taped somewhat together so it looks sorta ok from the ground.

Hypotheticly speaking of course.

Gunner

I see what you are trying to say but the logic does not make sense. If you want to do it legal their is a lot of red tape. If I wanted to I could go out and get me a ham rig tomarrow without even having a permit and talk away. So what good is all that red tape that you say is keeping morons off the air. CB has strict rules and requirements too. It not the red tape that gong to keep the morons off. Its enforcement of the rules. Plus you do not need a permit to own a ham rig. just one to transmit. All the red tape is doing is keeping the good law abideing people off. If morons want to talk on ham they will with or without a permit.

Didn't the navy use spotlights for ship to ship communications?
A handle on the side of the spotlight would be used to open
or block the light, and it would be controlled with something
like or maybe it was Morse code. Good for keeping the enemy
from receiving the comm on the radio, you aim the narrow beam
at the ship you want to talk with, and presumidly others off axis
the beam would see nothing.

That's an excellent point John. But they may soon find that no one is
talking
back. In most cases the "moron" will only keep transmitting if he/she is
getting responses. (kind of like a troll on a newsgroup). A (good) ham op
is taught early on to ignore these transmissions. It's just no fun for the
illegal
operators if they don't get someone to bite.
And if the illegal op really just wants to make contacts, once again, no
one
is likely to respond to someone without a valid call sign.

Steve

I don't know exactly what code is/was used but obviously lights
would be capable of sending dits and dahs. I can imagine someone
using a flashlight at night to call for help using Morse code.
If I remember right, it happened fairly recently.

My point is that a method, like tapping or mirrors, that has no
natural way of sending both short and long sounds or pulses, is
virtually useless during emergency attempts to communicate with
hams who generally know only radio Morse and not telegraph Morse.

I saw this one at Dayton. I couldn't figure out why the box was so big. It
was mostly space. Then again this might have been the prototype.
Can't remember if it was hooked up. Website below shows only three boards.
It ought to run cooler with the large box and there would be room there for
expansion cards possibly. Still hate tying up a computer to scan freqs.
Speaking of hooked up I heard the rep from Icom at the Icom booth say they
were considering hooking antennas up to their receivers next year. If you
have ever been to Dayton you know there are tons of radios on Demo with no
antennas connected. I have never thought this made sense.

Nickle911 wrote:

> Where can I find N and UHF connectors for RG6 coax.Phil

RG6 is too large in diameter for the UG175/UG176 series of UHF reducers to work. There is not enough metal there to allow them to be bored out either.
As N connectors are constant impedance- an N connector for RG6 (if it exists) would be a 75 Ohm connector. The center pin is smaller than 50 Ohm N's - so be careful about trying to mate w/ 50 Ohm N's.

Hi...

Have anyone know a Rockwell Collin 95S-1A is use for and how much
does it cost for new and second hand radio? My friend want to sell this
receiver for me but I have own Drake R8A so I need to know what
defference between Drake and Collin? If it look interest maybe I will buy it!
Anyone have manual or software for control Collin 95S-1A radio? Because
seller don't have both. Any comment is welcome.

bigbear@thai.com
Regard.

Pls sent via my private mail.

Sent via Deja.com http://www.deja.com/

Hey, I didn't say the system was perfect, Keith. Of course there are idiots who make their way into ham radio. We can only be thankful that they're not trying to trim coax with a chainsaw. But, overall, the system works, and that is probably about the best we can hope for it. And even a system that is only partly successful is better than no system at all (which is what some are advocating in the thread).

100 watts of rf power does not create a major safety concern,heck I can
burn myself with a 100 watt lightbulb and suffer a greater burn. safety
is also not going to convince the fcc or congress...ranks do the
convincing.

>
If you have problems with kids around feed lines and antennas then they
should be raised and secured. If you are so close to the nieghbors that
stray rf becomes a safety issue the station in question has a big
problem.

My Galaxy Saturn had the same thing. Real handy along with the built-in freq counter; could get in between the channels and have everyone looking for us on. When I was working security in college, I kept a 12-volt lawn-tractor battery, battery charger, and 102" whip with a quick-release mount in my guardshack (it had a metal roof...perfect for the whip) and would bring my Galaxy and little Palomar 300 toaster in a backpack. We had a very active CB community in those days, incluiding my mom who was disabled but had a big ol' base station and sat up all night running her mouth and my bro-in-law who also worked security. Beat the hell out of sitting out on post all night staring at the wall clock. Did this for a couple of years until my mom died, my bro-in-law left my sister, and then I just lost interest in CB. I'd had my ham ticket for a couple of years by then, but had stayed on 11m because of all the friends I had there.

I know what a VFO is and what it does. Had one in an old Golden Eagle (Listen to the scream! LOL). I was just clarifying (pardon the bad pun) what was an was not legal according to the FCC.

Just heard one officer say to another (on TAC channel) that she'd been dispatched because someone had his dirt stolen. There were several wisecracks about it being a dirty job, etc. The original officer asked if dirt has a serial number. Other officer said he asked the detective, and yes it does. It is on the bottom. Final comment was that she'd better hope it doesn't rain, or the case will turn to mud. :-)

Here's what I have from a few years back.

Lopatcong:
155.655 Police
45.220 Old Police or DPW

46.140 Fire (County Net)
46.540 Rescue Squad

Also try for Warren County:

155.760, 155.820, 153.920 Sheriff etc.
155.235, 155.265 Area EMS
159.570 Road Dept.

Hope this helps.
Good luck,

Phil

Hi,

Today I uploaded the latest version (1.1)of ARC2 software for Icom R2.
This version now also supports Windows NT4.

Some other minor bugs related to the bandplan were fixed so we advise all
reg.users to install the latest version.

We also slightly improved the Webcatcher option.

Windows ME is yet not officially supported but one of the reg.users claims
it works under ME.
Windows NT2000 support will be available soon.

Regards,

Gommert

John Doe wrote:
> I see what you are trying to say but the logic does not make sense.

It matters not if there is a logical defense, the
bottom line is that the reality of history has
shown that it (testing) is valid and works.

> If you want to do it legal their is a lot of red tape.

If passing a relatively simple test is "a lot
of red tape" then I wonder what it is you
really want. Indeed, my presumption of your
several postings over the last few days seems
to indicate (IMHO) that you want a NO test
license or perhaps even a no test/no license
amateur radio service.

> If I wanted to I could go
> out and get me a ham rig tomarrow without even having a permit and talk
> away.

You could try that, but you'd be caught at it.
Hams do not support such "pirate" operators.
Could you get away with it for some time? I guess so,
but you'd be a rogue operator and never accepted
by licensed hams and, more likly, pursued (
justifiably so) as a law breaker.

> So what good is all that red tape that you say is keeping morons off
> the air.

Let me make this perfectly clear. The "red
tape" you complain of (as minimal as such red
tape is) does work. It ain't perfect, but
just compare the CB land free for all frequencies
to ham bands and you can come to no other conclusion.

> CB has strict rules and requirements too.

Of which the FCC does nothing except in the
most severe cases. The FCC has abondoned CB
as far as rules enforcement (IMHO).

> It not the red tape that
> gong to keep the morons off.

Again, history proves you wrong on that point.

> Its enforcement of the rules.

Enforcement is absolutely needed to go
after the real offenders. Ham radio had
some real bad apples until a year or so
ago...BUT they were easy to identify BECAUSE
they were licenesed. The FCC began cracking
down and the worst are gone and many other
border-line cases have cleaned up their acts.
On CB, the FCC doesn't even know the name
and addresses of those that operate legally,
much less those that operate above the law.

> Plus you do not
> need a permit to own a ham rig. just one to transmit.

True. Your point to that is what?

> All the red tape is
> doing is keeping the good law abideing people off.

So how come there are over 1/2 million hams
of all sorts of backgrounds that managed to
get by the "red tape". Truly you can't
suggest that a single test (to get a technician
amateur license) is too much red tape for you?
But then, maybe you do and, if so, that is truly
a sad commentary on your personal commitments.

> If morons want to talk on
> ham they will with or without a permit.

They certainly can, and they will also then
face heavy fines and/or jail time. I'll happily
join in the pursuit of anyone that does so.

No cheers,
Bill K2UNK

> would work just as good. The morons would get bored and leave. But
> their are a lot of hot heads out their that would give them what they want.

Again, I point to history of ham radio which
has a track record of total opposition to
"pirate" hams on the ham bands. There has
been no such sub-element of "hot heads"
out their that would give them (pirate hams)
the time of day. More likly, the vast majority
would help "nail" the moron/pirate ham.

Cheers,
Bill K2UNK

No I am not an expert on how NGs work. I do try to keep an open mind Those news groups down below I dont even go to them. The ones I do goto does not have any messages that I post here. If by chance it is me then I seek info on how to stop it. I use outlook express and I see no options about cross posting. Im not even subscibed to those groups. may have visited them once maybe about 5 months ago. So if you or anyone else has info about how to stop it then please tell me.

Thanks,

I need to get my hands onto a PRO-2067 500 Channel Mobile Trunktracking scanner. Must be in Excellent to mint condition. They are not for sale in Canada and the one's we do have in Canada are not Trunktracking and not only that, they suck. Any other suggestion to a Vehicle Mount Trunktracking scanner would be greatly appreciated as well.

Thank you,
Jason Morris

We appologize to all who visited last week, the web designer has been let go.

We want to invite all active scanner buffs to MedicDispatch.com. At MedicDispatch.com you will find Live Dispatch channels currently at 4 stations but growing every day.

We are currently in the process of redeveloping our site to encompass all Scanner News, Frequencies around Canada and the US and of course the latest in news.

Our site is geared towards EMS, Police and Fire scanner enthusiasts, but we invite all who are interested to give our site a try. It is currently very under developed, however it will grow every day.

Visit us today @ www.medicdispatch.com

Thank you and we look forward to your visit.

John Doe wrote:

> . All the red tape is
> doing is keeping the good law abideing people off.

How is that? First of all it isn't "red tape", it is the requirements to obtain a license, which anyone with a little initiative can easily do. The amateur service allows those who are licensed to build and modify their own equipment if they choose to do so, however it isn't required (name some other radio services that allow this). Because of this the testing is to establish that the person requesting a license to operate in the amateur radio service has at least a basic understanding of theory and knowledge of the regulations so that if they do choose to construct a transmitter, they will hopefully have the knowledge to unsure that it will meet certain standards and not interfere with other services. Why do you think that radios used in the CB service must be type certified to meet certain FCC required stability, emission, and power output standards and no modification is legally allowed? It is because there is no "red tape" (requirements) to operate in the CB band thus anyone without the slightest knowledge of radio theory can operate there. Unfortunately adhering to those standards doesn't happen that way in CB and that is why the CB band is the sewer pit of radio communications and the FCC gave up on any enforcement except for special cases involving severe interference to other services. All one has to do to get on CB is run down to K-Mart, purchase a CB, hook it to an antenna and start shouting "aaaaaaauuuuuuuddddddiiiiiiooooo!!!" If passing some simple requirements is just to hard or those requirements are just not worth the effort to you to have access to the ham bands, then the CB band should work out just fine for you, but don't whine and cry and expect the privilege to operate in the amateur bands to be given to you without some effort on your part., just as many things in life come only after putting forth some effort.

Since there would be no benefit to actually using a STEREO input for a scanner, you can just use a simple adapter to accomplish what you need. In fact, some scanners (I think most of the Uniden models?) are set up so that if you plug a stereo mini-plug into the earphone jack, it'll put out a signal on both stereo lines so that it'll effectively be mono anyhow. For instance, you could use a stereo phone plug to 2 RCA jack adapter to feed the signal into whatever you want that uses a pair of RCA plugs for stereo input.

You have hams usuing 100 watt microwave radios?

Do tell, cuase i'm willing to call myself stupid. The max the units I
use in 2ghz are limited to 10 watts. But if you say hams are allowed to
blast 100 watts on a microwave frequency I guess I would have to agree
that there is a safety issue.

So what do you get to do with 100 watts on a microwave freq..
I bet it's great for those short intercity hops :0.

Source record: 79634

* * * C A U T I O N * * *

RE: SELLER "MULTICOMM2000" (Martyn Allison)

Dear Buyer:

I will try to be brief.
I was a bidder on Martyn's "Yupiteru MVT-9000 MKII" back in early June. I was not the final bidder. However, thru e-mail Martyn told me he was going to England in a week and was bringing back 12 more.

Long-story-short….
On June 13, 2000 -- $473.93 was charged to my Visa acct. to "Multicom2000 Ltd." Huntingdon, GB (which I later learned is Martyn's company in England - which he is closing).
web address: http://www.multicomm2000.com/page2.html

He said he would ship item upon his return (3 weeks).
It is now 3 MONTHS latter… No item…. No more e-mails… No nothing…'till now.
Martyn has suddenly posted 101 items on e-bay. When I e-mailed him that I was writing this note to his bidders I finally got a response.
Basically: …Hold off for a week… he'll look into it.
By that time, you will have sent your money. Good luck.

Moral…
Be very very careful - especially with large amounts.
Use an escrow service if possible.
Above all: Proceed at your own risk!

Finally…
I'd be happy to answer any questions or forward any e-mails I have had with Mr. Allison.
E-bay and these newsgroups are a great marketplace ….Don't get burned. I did.

Hope this may help someone.

Sincerely,
Paul Cecchini
Chicago, IL

If you do not want to crosspost to a bunch of groups, double click on the post you are replying to, and delete the other groups. You *are* crossposting because the posts you are responding to have been crossposted.

For instance, I am replying to this message that I just saw posted in the rec.radio.amateur.policy newsgroup. When I double-click on the message, a separate window opens up (I use Outlook Express also). When you double-click on a message, look at all the addressees that appear. Here is what mine is showing right now:

alt.radio.scanner.flame_fest
rec.radio.amateur.misc
rec.radio.amateur.policy
rec.radio.cb
rec.radio.scanner
rec.radio.shortwave

I have deleted all but rec.radio.amateur.policy, because I don't read the others and try to catch crossposting whenever I can. Sometimes I miss, but, what the hell...I am only human. Double click, delete the cross-posting, or leave it in. Hell, I don't care what ya do...really don't. Just figured you'd like to have the info! :)

Maybe this might help you understand Available Power Levels At Amateur
Frequencies including their microwve freq.
Have you ever heared of moonbounce on microwave freq..
Rick

97.313 Transmitter power standards.
(a) An amateur station must use the minimum transmitter power necessary to carry out the desired communications.
(b) No station may transmit with a transmitter power exceeding 1.5 kW PEP.
(c) No station may transmit with a transmitter power exceeding 200 W PEP on:
(1) The 3.675-3.725 MHz, 7.10-7.15 MHz, 10.10-10.15 MHz and 21.1-21.2 MHz segments;
(2) The 28.1-28.5 MHz segment when the control operator is a Novice Class operator or a Technician Class operator who has received credit for proficiency in telegraphy in accordance with the international requirements; or
(3) The 7.050-7.075 MHz segment when the station is within ITU Regions 1 or 3.
(d) No station may transmit with a transmitter power exceeding 25 W PEP on the VHF 1.25 m band when the control operator is a Novice operator.
(e) No station may transmit with a transmitter power exceeding 5 W PEP on the UHF 23 cm band when the control operator is a Novice operator.
(f) No station may transmit with a transmitter power exceeding 50 W PEP on the UHF 70 cm band from an area specified in footnote US7 to 2.106 of Part 2, unless expressly authorized by the FCC after mutual agreement, on a case-by-case basis, between the District Director of the applicable field facility and the military area frequency coordinator at the applicable military base. An Earth station or telecommand station, however, may transmit on the 435-438 MHz segment with a maximum of 611 W effective radiated power (1 kW equivalent isotropically radiated power) without the authorization otherwise required. The transmitting antenna elevation angle between the lower half-power (-3 dB relative to the peak or antenna bore sight) point and the horizon must always be greater than 10.

(g) No station may transmit with a transmitter power exceeding 50 W PEP on the 33 cm band from within
241 km of the boundaries of the White Sands Missile Range. Its boundaries are those portions of Texas
and New Mexico bounded on the south by latitude 31° 41' North, on the east by longitude 104° 11'
West, on the north by latitude 34° 30' North, and on the west by longitude 107° 30' West.
(h) No station may transmit with a transmitter power exceeding 50 W PEP on the 219-220 MHz segment
of the 1.25 m band.
§97.315 Certification of external RF power amplifiers.
(a) No more than 1 unit of 1 model of an external RF power amplifier capable of operation below 144 MHz
may be constructed or modified during any calendar year by an amateur operator for use at a station
without a grant of certification. No amplifier capable of operation below 144 MHz may be constructed
or modified by a non-amateur operator without a grant of certification from the FCC.
(b) Any external RF power amplifier or external RF power amplifier kit (see §2.815 of the FCC Rules),
manufactured, imported or modified for use in a station or attached at any station must be certificated
for use in the amateur service in accordance with Subpart J of Part 2 of the FCC Rules. This
requirement does not apply if one or more of the following conditions are met:
(1) The amplifier is not capable of operation on frequencies below 144 MHz. For the purpose of this
part, an amplifier will be deemed to be incapable of operation below 144 MHz if it is not capable of
being easily modified to increase its amplification characteristics below 120 MHz and either:
(i) The mean output power of the amplifier decreases, as frequency decreases from 144 MHz, to a
point where 0 dB or less gain is exhibited at 120 MHz; or
(ii) The amplifier is not capable of amplifying signals below 120 MHz even for brief periods without
sustaining permanent damage to its amplification circuitry.
(2) The amplifier was manufactured before April 28, 1978, and has been issued a marketing waiver by
the FCC, or the amplifier was purchased before April 28, 1978, by an amateur operator for use at
that amateur operator's station.
(3) The amplifier was:
(i) Constructed by the licensee, not from an external RF power amplifier kit, for use at the licensee's
station; or

(ii) Modified by the licensee for use at the licensee's station.
(4) The amplifier is sold by an amateur operator to another amateur operator or to a dealer.
(5) The amplifier is purchased in used condition by an equipment dealer from an amateur operator and
the amplifier is further sold to another amateur operator for use at that operator's station.
(c) Any external RF power amplifier appearing in the Commission's database as certificated for use in the
amateur service may be marketed for use in the amateur service.
97.317 Standards for certification of external RF power amplifiers.

IS THE CITY SAN BERNARDINO ON A TRUNKED SYSTEM IF SO PLEASE PROVIDE FREQUENCYS AND TYPE OF SYSTEM USED IN THE FONTANA AREA AND COLTON. THANK YOU

6096. Pro 2052 test software

Newsgroup: rec.radio.scanner
Date: 2000-09-14 00:00:00 UTC
From: ~Kevinw <darkjedi@azstarnet.com>
Message-ID: <ss34kf49dc699@corp.supernews.com>
Source record: 79643

If you're interested, i decided to start writing a pc program for controlling the pro 2052. After an hour of work.. here's what i've come up with.
http://www.azstarnet.com/~darkjedi/Scanner-2052.zip (1.5 mb since i decided to try VB6 (yuck)). Currently the program's channel/freq display only supports scan mode, so I've disabled the other buttons.. I did add the ability to manually send commands to the scanner as well as a scanner response box (though, as stated, the channel/freq display might not be accurate).

Why am I posting such an incomplete POS?
I want to know if there are people out there that would actually want free scanner software for the 2052. I'll only continue the program if there is enough response from y'all. (it does everything I need it to currently)...

NOTE: currently the program requires the RS232c cable to be connected to COM1 with the scanner already in PC mode. Don't forget to test the connection using a terminal program and the SI command.

The program will open the port, turn on the Squelch monitor and set the scanner in SCAN mode.

I have tested the software on two machines and not had any problems.
enough rambling... I'm sure there are other programs out there that can do this.. I'm just not interested in paying for them :)

~Kevinw

PS.. the file was scanned using mcafee before I posted it.. BUT... be a good downloader and scan it yourself.

Mark, with the exception of chain saws, all of these devices are designed so the average, unskilled, consumer can operate them safely without harm to himself or others. This is not so with high powered radio equipment, especially in the microwave frequencies.

More importantly, ham radio, under normal operating conditions, involves the risk of harming others (unlike the devices mentioned above, including the chainsaw). Radio signals don't just stop at your front door - you're neighbors are involved also. So are the children who happen across your antenna in the back yard. That is why ham operators are tested for knowledge about RF safety.

I can't disagree with this one.

Why enact a law if they are going to write permits? How much is the permit? There has to be a catch.....

I got it, they want to know how many "law abiding people" have scanners in there cars.

6102. E-Trunker Question

Newsgroup: rec.radio.scanner
Date: 2000-09-14 00:35:42 UTC
From: "David M. Hitchner" <BiteMe@Spammers.com>
Message-ID: <y3Vv5.119412$oj6.2844400@news1.rdc1.tx.home.com>
Source record: 79677

I have been using E-Trunker to monitor a local EDACS systems.
For the most part everything works correctly. The problem is
that I only get 50% accuracy and I believe some of the info is
missed. The systems I am monitoring are only about 10 to 15
miles away and I get a strong signal. Using Trunker to monitor
Motorola systems I regularly get 90%+ accuracy even on
weaker signals.

Is E-Trunker not as good at decoding the control channel as
Trunker? Has anyone else seen this problem? Are there any
tricks to setting up E-Trunker?

I am running a Pentium III @ 450 MHz under Windows 98. As
I have stated above, Trunker runs with no problems on my system.

Thank you.

Message-ID: <ipVv5.51310$58.6326180@typhoon.tampabay.rr.com>
Source record: 79678

I had the same problem. In my case, it was the Hamcom
interface. I was using a "store bought" model. I ended up
making my own, based on the diagram at this link:

http://www.lcblanton.com/dfw/dig/2level.jpg

The instructions for this, and other interfaces, it located at
this link:

http://www.lcblanton.com/dfw/interface.htm

E-Trunk is now working perfectly. I can get a 100% rating
almost instantly where as I could only get 50-70% before even
after leaving it running for a while.

BTW, I'm using an E-Machine
(http://www.e4me.com/infocentral/product_tower400i3.html)
and I wired mine with a DB-9 (using Com Port 1) rather than
a DB-25.

Sales staff are always getting jerked around - even in supposedly
reputable companies. I used to work at a place where the sales staff
made 5% on every order. One sales guy sunk a deal work literally
millions over the first year. It really put the company up a big notch.
After three months of outrageous commission checks they changed his
-remuneration package- and set his -targets- much higher. Of course he
quit and sued, but without much luck.

Give 460.0750 a try. I'm too far down south in Jersey to pick this up,
but it is a frequency listed in Police Call 2000.

> there is no chance to upgrade to some GOOD filters without
> changing a LOT.

If last IF is made with Xtal oscillator, its relative easy to change
last IF by changing that Xtal.
Exsample if i decide change MVT-9000 last if to 1MHz, i replace one
crystal and recalibrate VXO what made those 50, 100, 200Hz step size in
Yupi.

> This had happened on the PCR1000 too... So there was NO chance
> on a filter upgrade .... :-(((

Hm... i dont say its impossible, maybe difficult but not impossible.
How that last IF mixing is made? PLL or Xtal??

> In many cases there is triple conversion on the narrow modes
> only, using a 455 or 450 khz IF.
> In most cases the wide-FM is double conversion only, using the
> 10.7 Mhz IF, wich is the 2nd IF to the 3rd too.

In MVT-9000 exsample, all modes are triple conversion. include WFM.

> > Example Yupiteru MVT-9000 what i'm familiar with, have 3 IF's.
> > First is 765.5MHz or 254.5MHz depend freqency range. (SAW filters)

>
> No, not surprising.
> The bandwidth on WFM is 150 to 230 khz.for FM- broadcasts and
> TV-sound reception.

Yes, price is still factor what have much effect.
Why desing everything again if there is ready solution?
Like wide variety of 10.7MHz filters for WFM.

> They are not to realize with acceptable shape factor on a 455khz
> IF .

=)

> So there is the question if the MVT9000 is a true tirple
> conversion on WFM too or if it simply uses a 10.7 Mhz if as 2nd
> stage instead of the 44.185 Mhz... ??

Yes, its true triple conversion.
Only it doesnt have xtal filter for 2nd IF in WFM mode.
Only in 1st IF and 3rd IF have filters in WFM mode.
I've made video output from that 2nd IF.
Its bit narrow band but i can see B/W image quite well with my Yupi...
;)
(that start from ICR-3, cause i was just curious if its possible with
Yupi too ;)

> There is a bandwidth of 30 or 50 khz also available on some
> scanners, (used for reception on weather satellites for example)
> wich is (normally) realized with 10.7Mhz filters.
> 455 khz IF-filters with bandwidth above 20 khz are rarely used
> and very uncommon.

To be honest, i dont know any scanner what have 30 of 50Khz bandwidth,
other receivers yes but not a scanner.
I curios, what scanners have that kind of bandwidth?

> > All wide band scanners what i have, have bandpass filtering!!
> > MVT-9000, AR-8000, AR-8200, MVT-7300, 7100, 7000, UBC-9000, UBC-3000
> > ect.
> But ALL filters of those together are not worth of a single one
> in the IC 8500 / 9000..

Remember Price! and IC-8500/9000 are not scanners! how to made handheld
IC8500? 8-D
If Icom have triple price vs. Yupi, it should have at least douple
quality.

> > Well, there is also other "real" receivers than IC-8500 or IC-9000.
> > How about Rohde&Schwarz???
> a good choice, really. :-)))

I consider R&S are real receivers, IC8500/9000 are expensive toy's.
Like W&J ect ....

That new Yaesu VR-5000 is also same class, expensive toy like all
scanners but its receiver what is reasonable priced...
We get what we pay for... ;)

I'm curius how well that VR-5000 perform when i get in test.
Out supplier have promise that quite soon to test but EU models are bit
late... :(

> > > On some HF receivers, the 3rd IF will be at 50Khz. It is fairly easy

What is it with you and Brother Stair??

I tuned into 6110 kHz today, there must have been some fading as the audio was very distorted and scratchy, it sounded like Brother Stair was shouting and he sounded quite angry.. In fact, it sounded the same last week and the month before that...

I wonder why he uses 6110kHz during the Afternoon here in Europe? Are those the cheapest, roughest frequencies going? Any broadcaster worthwile usually goes for 31m or smaller...

Just wondering...

6128. Wintone warning

Newsgroup: rec.radio.scanner
Date: 2000-09-15 00:00:00 UTC
From: neep.neep@acme.com
Message-ID: <jqf5ssksdcupbevg4shmv5s2fijvmbhag9@4ax.com>
Source record: 79506

After finding two serious bugs in Wintone over a year ago, I sent the
support folks this message. They admitted that the bugs were there
and promised a new version "real soon now." Needless to say there
was no new version.

Save your money and buy something else!

73,
Jim N2VNO
ZZZjim_cronin@juno.comZZZ (remove the ZZZ's to reply)

-------- The original message -------------
I purchased WinTone 2.02 to monitor a local repeater. There
are two bugs that prevent me from using WinTone:

When using "monitoring" to record activity the file size grows. When
it reaches 7008 K bytes (at 14 minutes 57 seconds of audio) six
popup windows appear, each with the text:
"Out of memory while expanding memory stream."

Since there is more than 15 minutes of activity in a day this is a
problem and makes WinTone unuseable.

The second thing occurs when turning monitoring on, then off, then
on. A popup appears with the text:
"You attempted to call StartRecordFile Recursively!"
WinTone then exits. This is a less serious problem than the first.

My configuration is an AMD K6/233 with 160 meg of memory. When the
errors occur the system monitor shows over 100 meg of free memory.
I tried both the generic .dll file and the pentium .dll;
both behaved the same. I have active tone detection set for
extended DTMF.

Can you help out with this? WinTone is a great piece of software
except for these two problems.
Please let me know as soon as possible if you do not intend on
releasing a fixed version.

Sounds dang good to me. My dream feature would be a scanner/radio that went continuously from 150khz to 2GHz. I think there's already radio's that do this, so the real dream is having the cash to get one. Of course, if anyone wants to send me one free of charge, please go ahead. Bwahahahaha! :)

Hi Dennis,

I'm looking for a mod to make this unit receive older cordless frequencies.
(40MHz)

Thanks

My Radio Shack PRO-91 is spec'd at being able to search through 50
programmed channels per second. So yes, if you programmed all 150
channels (5 banks of 30) and enabled all banks, it would take 3
seconds to run through the whole set, by that measure.

FOR SALE -

One software company in the business of making scanner software.
Asking Price - $0.50 or best offer.
Don't want to waste time on E-Bay.
Having some legal problems.
Support staff is non-existent.
Programs are garbage and overpriced.
Lots of errors in programs due to inexperienced programmers.
Please take this thing off my hands.

For more information on this useless company, visit

http://www.trunkmaxpro.com

Thanx.

PS - The above post was somewhat done in humor (Well, the for sale part anyhow.) It seems that if you send these people's tech support department e-mail for support, they never reply. I have even tried calling the phone number on the auto-reply e-mail I got back from them say they would get back to me, but the number just rang busy for hours on end. I finally gave up and deleted their crap of my computer. What a waste of time this was.

Signed,

A Concerned Scanner User

I've personally seen a few operating the limit on 2m and 440 (and hear
of others), so I'm sure more than a few have tried operating at the
limits on frequencies higher than that. In other words, if the rules
allow it, I'm sure someone has tried it. And that is why safe operation
on those higher frequencies is covered in the license exams.

But, what is the purpose of your question? There are a lot of ham
operators out there, and a lot of frequencies available to ham operators
in the VHF, UHF, and higher, bands. Therefore, I can't possibly know
which frequencies each ham operator, using higher power levels, is
using. Since that is rather obvious, your question seem more rhetorical
than an honest attempt to seek an answer.

You can do it on the Icom PCR-1000, a computer-controlled scanner. (Not a card,
it plugs into the serial port.)

Well, I'm sorry you took it that way, Barry. I answered your question the only way I could - I don't know. But, again, that would seem rather obvious (without study, how can anyone know what a large number of people are doing), which is why I was left wondering about the intent of the question.

Perhaps you misunderstood the content of my previous comments. I never said that I knew of anyone using high powered equipment on any frequency. My comments were limited strictly to the rules, which would allow such operation. And the need for a license exam because of that possibility (and other reasons).

FOR SALE:

Nice Quality Tower AT Case
Intel Advanced/AV Mother Board!
Parallel Port
2- RS232 Serial Ports
Intel Pentium 200MMX CPU
64MB of RAM
3.5" Floppy Disk Drive
1- Western Digital 1GB Hard Drive
1- Western Digital 3GB Hard Drive
16X CD-DROM Drive
Matrox Mystique 3D Video Card
Diamond Monster 3D Accelerator Card (works in tandem with the Matrox card)
Sound Blaster Sound Card
101-Key Keyboard
(No monitor, or mouse)

Clean, like-new condition, Win98SE loaded for testing purposes, and working perfect! This would make an excellent system for controlling scanner radios, shortwave radios, and/or for monitoring some of those digital modes!

If interested, make "reasonable" offer, before I post it on Ebay.

Thanks,
Bill Crocker

Message-id: <ss2tsj61ct6125@corp.supernews.com>

this one has the 1147a rev chip and a mfg date of jan 94. can this be cell mod'd? I know it says to cut the resistor but it either has no resistor or the resistor has been moved from the "den" location.

any help would be appreciated.

\thanks.

All BC-2000xlts will cell modify. the resistor you seek is a SURFACE-MOUNT device and does not LOOK like the resistors most of us are familiar with. Its there....

But we're talking about as much as 1500 watts, not 100 watts. That is
the limit legally allowed on some ham radio frequencies. And when
you're talking about the higher frequencies, safety around 1500 watts is
a real major concern.

Good post, Rick. And, Mark, thats why ham radio operators are tested on the rules, radio safety, and proper equipment operation. The rules we have to live by are enough to make a person's head swim. And the equipment we are capable of using does pose a great risk if not use properly. With that in mind, it is entirely reasonable to require a license exam and license.

6192. >>> NEW UK SCANNER WEBSITE <<<

Newsgroup: rec.radio.scanner
Date: 2000-09-16 00:00:00 UTC
From: Mad Dog McQ <MadDogMcQ@freenetname.co.uk>
Message-ID: <8q0gml$re2$1@gxsn.com>
Source record: 79452

Hi Guys,
I've uploaded a new site at www.etfw.co.uk which is primarily aimed at Icom PCR1000 users, BUT will hopefully be of interest to a good many other scanner users too.

There's a place to communicate directly with other Scanner Users too. I have started a Scanner Forum at the following URL:

www.delphi.com/scanners From there, you can communicate with others in the Scanner Community and pass on help, tips, frequencies, stories, etc. You can even post files to other visitors.

Also on the main website (www.etfw.co.uk), you can advertise your unwanted radio kit or post a "wanted" advert.

This is a brand new website and I hope that in time, it will become of value to its visitors. If anyone fancies contributing by perhaps writing a regular column or occasionally writing something that will interest or help other scanner users, please do let me know.

If you guys have any ideas for the site, I'd be only too pleased to hear from you.

Many thanks,

Tom.

Dwayne !!!!!!

If you don't have anything positive or informative or you have limited vocabulary as it seems you do. Then you need to go to alt.binaries and find some friends more on your level of education !!!

Why won't this thread die? Why does it still have to be seen in alt.firefighters?

It looked like this was finished on Aug 31, and two weeks later it is deja vu.

It seems to me that there are a lot of people who can't rest until they get the last word and this is most likely a perpetual vicious cycle. Do what you want in your own newsgroup but why do other groups have to see this crap. Why should people in other newsgroups have to fill their killfiles with people from the radio groups?

If you can't agree to stop cross posting this petty bickering, why not get together, pick a number between 1 and 100, and let the winner get the last word in and end the thread.

OK, so you either QUIT or were KICKED OUT of the Marines and now
are "not impressed" with those working in various capacities of active
or reserve military duty.

Let me say this, Allsafe, I don't believe you were a Marine because
I have NEVER met a Marine that was a COWARD and AFRAID as you
have demonstrated by NEVER posting with your real name or ID. Nearly
everyone else (including myself) give their real ID or at least a
commonly acceptable way to identify.

> And I'm pretty sure you'll be released from duty,
SNIP

Why, because YOU were?

Hello,

Does anyone here know if there are any freq's for Toronto, Canada that are not trunked? I am leaving for Canada tomorrow and have seen on www.ontscan.com that the Toronto system is trunked. Does one have to have a special scanner to pick up trunked freq's? Thanks for all your help.

Mark

Nobody is stopping _anyone_ from communicating on CW. This issue is
whether it should be a licensing restriction. Face it, it's going
away. Maybe the technical tests should be toughened up, but the hurdle
of CW hasn't kept sleezeballs off the air. It was the lack of FCC
oversight that let the bands get polluted. Now that they are back on
the ball things may get better. If we ever get to the level of
technological and social collapse that renders CW as the only comm
mode available , the availability of CW is probably the _last_ thing
on you're agenda

well, either you aren't the same person (somewhat likely),
or you got kicked off @home for your activities (more likely).
I see that you are using an AOL account (figures).

in either case, I probably have a better understanding of the military
than you would think (considering my dad was in the navy when I was 5!)
he made it to before he was discharged from the vietnam conflict
(honorably
I might add, considering my dad's faults).

So, don't go strutting your so-called patriotism at me.
if you are in uniform (which I doubbt), then you are definitely a
disgrace
and should be drummed out on your ass just on general principals!

The more likely case is: you are a wannabe, pure and simple. you have no
rank,
no standing in any branch, and you are just convering up for the fact
that
you were dropped by @home for abusive behavior.

so, why don't you take your wannabe, lying fat ass out of here before
somebody
decides to report you for impersonating military personel!

nuff said.

Thats fucking bullshit! I'll bet you can't even get anything higher than a

"confidential" clearance! Given how well the military does background
investigations (the NIS is VERY GOOD at this!), they have probably already

read your many postings on the net and decided that you are nothing more
than
a MOUTH (in the intel community, a "big leak").

The second you post anything on here of a remotely security related
nature,
you will lose any chance at ever having a clearance, period!

go peddle your BS elsewhere.. its jackasses like you that embarrass the
hell
out of the rest of us loyal; Americans!

Sensitive receiver, nice display backlight (two colour =)
Much birdies, good construction, over all nice radio but i miss much
features to it...
Probably i've played too long time with my MVT-9000's ;) ;)

Anyway, give reasonable features in price.

Did the logo on the cars say "Los Angeles County Safety Police"? If so, this unit provides security at all county run facilities such as Medical Centers, County Buildings, etc... Safety Police Officers have limited peace officer powers - on duty only as far as I know - I'm not quite sure which freqs they use simply because they're not really "players" in the overall public safety arena in L.A. County-no offense-but they don't really handle emergency calls or initiate activity in the field other than at their assigned posts...this is the only "County Police" outfit I'm aware of...

Jim wrote:
>
> My dream scanner would be as follows.
Quite near what i dream. =)

> *Wide band continuous (unblocked) 500kHz to 2054mHz
Yupiteru MVT-9000/AR-8200mk2 are really near... 2039MHz (yupi) 2040MHz
(AOR)
but i've put upper limit to 2600MHz.

> *Large alpha numerical display
MVT-9000/AR8200 have that also new upcoming Yaesu VR-5000.

> *Bright evenly lit backlight
MVT-9000 have that and old ar8200 backlight where too dimm and new mk2
model backlight is too brigth...

> *All available Trunk systems
Not much use here Finland...

> *Ability to scan conventional and trunk
> *Ability to use Alkaline, Ni-NH, or Lithium

And smart charge circuits like cell phones have.

> *Decent audio output

=) it need more power to handheld scanner in base scanners thats not a
problem.
MVT-9000 have decent audio in handhelds but too lower power.

> *Band Scope

Only scanner what is in to market right now with real time scope with
live audio is in MVT-9000...
but Yupi's scope should be much more wider than it is.... (right now
1.6MHz)

> *Computer interface
AR8200mk2 have that but controlling via that is poor... (software
suck's)
ICR-1000 ect are better but desinged only PC controll use.

> *Attenuator, NB, AFC
NB/ANL is need but that AFC??? if unit have enough accurate frequency
sythesis, it wont need that...
MVT-9000mk2

> *1000 channels user configurable to user specs (10 banks, 20 banks, etc.),
> and distribute any combination of channels to banks (20 channels bank 1, 50
> channels bank 2, 35 channels bank 3, etc)

??? some times usefull but not much...
I'd take more speed to scanning and search...
right now i'm quite satisfied to my "lightly" modified UBC-3000FAST what
scan around 275 step/sec.
Original values of UBC-3000 where 70-80 steps/sec. in scan and search
and in turbo search speed was 170 step/sec and now its 520 steps/sec and
values are measured, not quessed.... =)
UBC-3000FAST US is quite nice to analog cell band search with 30KHz step
size and 200 step/sec speed, calculate how fast it will seek hole
band... ;-)

> *Debugging feature
> *All mode, AM/FM/SSB/NAM/NFM/CTCSS/Voice Descambler

In MVT-9000mk2 have those (only CTCSS missing), next one what have those
with VI8200 slotcard is AR8200mk2 (CT8200 card too)

> *Additional 40 banks for search mode

Quite much... well memory is so cheap now so i'd take that too...

> *Reaction Tune capability for Scout
AR8200Mk2, soon possible with MVT-9000 PC controll board

> * 2 VFO's
MVT-9000mk2/AR-8200mk2

> *A REAL TUNING KNOB!
MVT-9000mk2

> *Flash card slot(s) for extended memory, upgrades, additional features
AR-8200mk2

> *User upgradable firmware capability by computer uploads
well that can cause similar problems like MS based systems... :(

> *Signal Strength Meter bar codes
???
MVT-9000mk2/AR-8200mk2

> *Backlit keys
MVT-9000mk2/AR-8200mk2

> *Useful Manual
MVT-9000 usermanual by Rich Wells... ;)

> Now wouldn't this be a joy to own and use?!!
> It's a mixture of the AR8200 MKII, Alinco DJ-X2, Bearcat BC245 XLT,
> Pro-92A!!
> Oh, and I almost forgot, the price would be $300 US
that's what i dream most but it wont ever come possible cause we all
know this, you get what you pay for.

> Oh well, back to the real world.
Yes, there is actually two scanners what are more near that dream,
MVT-9000mk2/AR-8200mk2

most important factor is good quality receiver! and that's why i drop
those all bells and whistles out with AR-8200mk2 and use my MVT-9000mk2
(i onw 8200/8200mk2/MVT-9000/MVT-9000mk2 plus couple others ;)
So my point is this, good receiver quality is more important factor than
all features..
what to do all those features with poor receiver quality.

Specially low IP3 is impostant in HF band monitoring, and low oscillator
phase noise.

Many people want much features but never thing what to do with those...
I'd take just those usefull and really working features with decent
receiver quality and then i'm satisfied.

Have you check www.bander.com/tech ???

> Yupi.

Hi Mika.

I do not own the PCR1000 for a while now and I do not remember the circuits
very well.
And I do not own the equipment to have this thing recalibrated wich is somewhat
tricky too while done by software programming an EEprom in the PCR1000....

>
> > This had happened on the PCR1000 too... So there was NO chance
> > on a filter upgrade .... :-(((
>
> Hm... i dont say its impossible, maybe difficult but not impossible.
> How that last IF mixing is made? PLL or Xtal??

OK it was impossible for ME :-) because lack of measuring equipment and a
calibrated TX... :-((

> Yes, price is still factor what have much effect.
> Why design everything again if there is ready solution?
> Like wide variety of 10.7MHz filters for WFM.
>
> > They are not to realize with acceptable shape factor on a 455khz

> > and very uncommon.
>
> To be honest, i dont know any scanner what have 30 of 50Khz bandwidth,
> other receivers yes but not a scanner.
> I curios, what scanners have that kind of bandwidth?

I have a Albrecht AE300SSB wich is similar to the Camnis HSC050 and the Trident
2400.
This thing has 50khz bandwidth for wide FM. To listen to FM broadcast or
TV-tone the sound is a bit thinny but the ability to divide signals is great..
:-)
The PCR1000 has a 30khz "wide" bandwidth output in addition to a 230khz
bandwidth on 2nd IF on 10.7 Mhz.

> > > All wide band scanners what i have, have bandpass filtering!!
> > > MVT-9000, AR-8000, AR-8200, MVT-7300, 7100, 7000, UBC-9000, UBC-3000
> > > ect.
> > But ALL filters of those together are not worth of a single one
> > in the IC 8500 / 9000..
>
> Remember Price! and IC-8500/9000 are not scanners!

Scanners are not definied by dimensions of its case... :-)) but for ability of
SCANNING....

> how to made handheld
> IC8500? 8-D

Why make it?? It IS ;-))

>
> If Icom have triple price vs. Yupi, it should have at least douple
> quality.
>

For sure it has....

>
> > > Well, there is also other "real" receivers than IC-8500 or IC-9000.
> > > How about Rohde&Schwarz???
> > a good choice, really. :-)))
>

So what Eric???? My father did 27 years in the military before retiring. He spent 3 years in the Army & earned the Combat Infantry Badge during the Korean War then joined the Air Force, became a commissioned officer & saw service during the Vietnam conflict. He held the rank of Lt Colonel when he retired. You mentioned age 5, when I was that age my father was just returning from duty in the Asian Theater during the Vietnam conflict to a new assignment stateside.

I ask you Eric, what does our father's military duty have to do with anything? Why did you need to even bring this up?

> So, don't go strutting your so-called patriotism at me.
> if you are in uniform (which I doubbt), then you are definitely a
> disgrace
> and should be drummed out on your ass just on general principals!

Have you ever been in the military yourself?? I SERIOUSLY doubt it as you are NOT the type the military would accept.

I have had NO problem entering the military, have just completed basic training, & am now a Petty Officer (Non-Commissioned Officer). I had my choice of joining several different branches. Yet YOU have NEVER seem military service!!!!!!!!!!

SNIP

You washed out.

Let me advise you of this, after six years in the Marine Corps active duty, I'm not exactly impressed with your weekend woosie reserve status. And I'm pretty sure you'll be released from duty, (If you haven't already) you'll be shuffled out the first time you lie when you get brought up for office hours. (They did advise you of the UCMJ, didn't they?)

Oh, and BTW, weekend woosies, especially those right out of basic training are not assigned classified positions. So you can drop that "I can't tell you..." crap. No-one believes it.

BTW...the newsgroup experienced a 87% drop in off-topic posts in your absence. Of course this ended when you washed out and returned to your antics as rrs resident pest. And I've got something else in store for you. You know how you crosspost your crap to boatloads of groups? You'll never guess who I'm gonna copy with every BS antic you pull in this group. (I'll give ya a hint: "Conduct unbecoming a sailor").

You friggin' loon

> a real major concern.

Actually, the new ISO radiation safety standards for human exposure
can kick in at 50 watts or even less, depending upon distance to the source
and frequency. Because different organs and parts of the body might
"resonate" at different frequencies, it's not quite as simple as saying
that X-watts are safe at any frequency.

For example, at 1.2 Ghz, a 50 watt signal at close range may
burn cells in your eyeballs and heat the vitreous fluids. Think
of a 50 watt microwave beam vs. a 50 watt AM signal.
Which would you rather stand next to? :)

And I agree, Ross. But I never said anything about the safety of wattage at any frequency. All I said is that the rules allow to use of high wattage, so the exams test for safey concerning high wattage.

So, if some guy can figure out how to do it safely on the higher frequencies (and the technology is available), than the rules allow him to try it. But, the FCC also thought it was a good idea to point out, in the exam, that he might be frying his eyeballs (and everything else) if he does not do it safely.

In other words, given the possible capabilities at our disposal, the exam and license serves a serious purpose.

6235. Re: Offshore Boat Race Frequency question

Newsgroup: rec.radio.scanner
Date: 2000-09-16 06:39:20 UTC
From: Tim Tyler <timtyler@mindspring.com>
Message-ID: <39C31598.9E91F7C6@mindspring.com>
Source record: 79523

I have no specific experience with Buffalo, but am a rescue-diver &
comms specialist for some of the other races...

APBA has some UHF channels, such as 461.200, used for referees,
timing/scoring, and some safety personnel.

Some VHF marine channels would also be used, by USCG or whomever
keeping the race course clear of intruders.

If it's the type of race where each offshore racer has their own
spotter/rescue crew following in a helicopter, they'll probably be
conversing on discrete freqs in the 450-470MHz range.

Jaypeggin wrote:

Another one you can try that a lot of municipalities use as a car-to-car
freq and sometimes repeatered is 453.7500, often with a PL of 114.8Hz.
Good luck.

Check out the Alinco DJ-X10. More channels, MUCH wider frequency range, more modes, MUCH better audio, dual VFO's, tuning knob, more search banks, better back-light, computer interface, easier to read & more informative LCD display, clock, timer, stronger - partially metal case, rechargeable battery packs, or "AA" cells, attenuator, etc.

> country by quiting. THAT is something this country does NOT
> need in the military is quiters, so you probably did the country
> a favor by getting out as they were better off without having a
> quiter (YOU).

So, by your logic, everyone who joins the service should stay there for the
rest of their life? Is that it? So everyone that leaves the service alive
is a quitter? Is that it? Is everyone obligated to join the military for
life? There's plenty of people who chose a military career for life, that's
fine. Are you saying that everyone who served less than a lifetime is a
disgrace? Just curious.

> > (You know, getting delined for further service in reserves is quite a

Message-ID: <39c50198$1_2@news.nwlink.com>
Source record: 79408
Cross-posted to:
alt.ham-radio.mods,alt.radio.scanner,alt.radio.scanner.flame_fest,nl.radio.scanners,rec.radio.scanner,rec.radio.swap

Radio Shack POR-2006 scanner with box, service manual, software, RS-232 interface, owners manual, Signed copy of Bill Cheek's Vol 2 Scanner Modification Handbook, HB-232 computer interface assembly/operation manual, short wave converter, cables, car mount bracket, spare LCD backlight panel. This is a radio hackers dream! This exact radio was featured on the PM Northwest TV show. I have easily over $1500 in this scanner, not including all the hours to build and install the mods. Must sell..... $700.00 plus shipping. Contact jackh@nwlink.com
Modifications:
1. AGC driven Digital LED S-meter readout for signal strength. Accurate enough to locate a signal source within 50 feet.
2. Carrier on indicator for visual confirmation of frequency lock.
3. Extended delay- keeps scanner from returning to SCAN function when freq "breaks" for up to 12 sec.
4. 400 channel memory(factory) upgraded to 6,400 channel memory!
5. Keyboard Memory Block Controller- gives you keyboard control of all the new memory block registers for programming or monitoring without using the computer.
6. Locked cell phone frequencies now unlocked (for testing purposes only)
7. Scan speed modified to scan 20 channels per second. (factory set is 10 cps)
8. RS-232 buit in computer interface allows remote/ automactic computer control of all scanners functions via the serial connection to your computer. Includes all software (DOS), interface box, cables, manuals.
9. Digital Squelch - this allows the scanner to unlock and return to scan mode if it locks on a ghost freq.
10. Grove CVR-1 shortwave frequency converter to allow the scanner to receive freqs below 1 MHz and up to 30 MHz.

You know, life sucks so much that I don't blame people for wanting drugs to make life bearable.
On the other hand, the only radio operators I hear doing drug smuggling is mexicans and columbians
at night on the shortwave bands.

Source record: 79413

I did something similar. I did this mod to all my Pro-2004/5/6's. It is a modulation indicator. All you need is a 2N2222A transistor and a LED.

Connect the base of the transistor to the junction of C201, D43, D44 (Pro-2005/6). Connect +5v to the collector. Lastly connect a wire to the emitter and run it to the LED which you have installed. Run a wire from the LED to ground and that's it!

The stronger the modulation the brighter the LED.

Don

So? I saved $22.20. Mine is a v1.17. Works fine for me. The system I listen to is not that busy plus it will be all digital modulation in a year or so, so why spend the extra bucks?

Don

Message-ID: <w09x5.4298$ap5.74681@news6-win.server.ntlworld.com>
Source record: 79417

I'm looking for software to reprogram a Maxon SM4000 series tranceiver or pointers to a description of what the data is in the 93C46 eeprom in the unit so I can use my eeprom programmer. I have searched the net for days now and am now able to reprogram lots of different makes and models but I still have no Maxon stuff.

If anyone can help it would be greatly appreciated.

6257. Re: BC245XLT display likes/dislikes

From: 2121d@gte.net
Message-ID: <39c51c4f.9568347@news.gte.net>
Source record: 79418

:Perhaps this has all been asked/said before...but. How do you Bearcat BC245xlt
:users like, or dislike, the display on the unit. Do you find that it isn't
:always easy to tell what agency or talk group the unit stops on because of the
:limited display? For example, I'd preferred that the display showed the bank
:number in 30pt Times New Roman, the channel in 20pt Times New Roman, and the
:talk group stored position and numeric number in 10pt Times New Roman.
:Thoughts?

The BC-245xlt needs an alpha numeric display. And better software.
Also it needs to be dual display so that trunked channels can be run
in one screen while single channels are run on the other.

6259. New Pro-2067 just won't "trunk"

Newsgroup: rec.radio.scanner
Date: 2000-09-17 00:00:00 UTC
From: jeh@cmkrnl.com
Message-ID: <39c51738.159412052@nntp.cts.com>
Source record: 79420

I just got a PRO-2067 and... I canNOT get it to do anything useful in terms of scanning a trunking system. I'm a fairly bright guy; I figured out a Yupi 9000 from the poorly-translated-from-Japanese manual, and an AOR AR 8000... and I have a Pro-2006 and -2004, both heavily modded. Point is, obscure scanners don't faze me much; but I just can't make the -2067 work the way the manual says it will.

The system I'm trying for here (San Diego City) appears to be a Motorola SmartNet type II system -- that is the info I find on the web, and when I enter some its freqs and manually monitor its channels, with the scanner set to MO mode, it displays Motorola type II talkgroup IDs. Fine so far, but.

I can't get the 2067 to do anything re. scanning in "trunked" mode. I put it in MOtorola mode, enter the freqs according to the book's instructions (pages 37 and 38) and hit scan... the book says "T appears and the scanner scans the frequencies". In fact, T does not appear; the display claims that it's "scanning" (and also says "priority off"), but it never stops on anything.

And yes, the bank IS set to "open". (+ in the scanning status display) I've checked it many times. I even tried setting it to "closed", just in case. No change. Set it back to "open", still no change.

(As an aside: I find it ludicrous that you have to have the bank set "closed" to get talkgroup lockout to work! So let's see, this means I have to go through and program every talkgroup I might ever want to hear, just so I can lockout one that I know I don't want! Who thought of that?!??! Anyway, I'm not using "closed" mode for now.)

Manually stepping through the channels shows that traffic is there, as do my non-trunking scanners. The 2067 does show the motorola talk groups when the channels are active, and the talk group numbers make sense for the traffic received... so it seems to acknowledge SOMEthing about trunking, but not as far as scanning is concerned.

If I go through the channels and set them back to FM mode, then let the scanner scan the bank (and lock out the control channel!), it properly stops on the active channels. Set the channels back to MO, unlock the control channel, make sure the bank is set to MO (steps 1 and 2, page 37), hit MODE until it says MO, hit scan (steps 5 and 6)... nothing. Might as well have turned it off.

I noted someone's comment about tricky squelch setting re. the scanner's ability to acquire the control channel. I tuned to an idle channel and set squelch so the background noise just stopped -- I assume this is the

right setting. But I tried several settings around that point. Still nothing.

Incidently - I don't know if this is significant or not - after attempting scanning for a while, when I hit MAN, the scanner is always on the control channel. And the control channel does not always display "CNTRL" for its ID. In fact most of the time it bounces around among a few different numeric IDs. Is this normal?

"Talk group ID hold" (to follow a conversation on a talkgroup from one channel to another), supposed to be entered by holding down TRUNK for more than two secs when you're listening to a comm with a displayed talkgroup ID, doesn't work either. The scanner just emits that "error beep" after two secs. Is this symptomatic of "not really scanning in trunked mode"? How do I fix it?

Any ideas? Is there something really basic here that I'm missing?

```
:> U.S. amateur equipment is only a small regulatory step away from being
:> fully type accepted, in which case there is no real reason for amateur
:> radio to be treated any differently than other radio services.
:>
:> With type accepted equipment, and type accepted antennas, installed in
:> an FCC approved way to prevent radiation exposure, we are rapidly
:> approaching the day where a ham station will consist solely of
:> appliances fully regulated by the government.
:>
:> When that happens, the bureaucrats in Washington will see little
:> difference among CB, the FRS, or amateur radio and will be tempted to
:> combine them into one service for administrative efficiency.
:>
:> I happen to think that day is close upon us. The first step will be
:to
:> declare CB operators to be a special class of amateur licensees. Mark
:> my words.
:>

:
:Quite possibly. I see one mention of a 'license' being required.
:Anyone remember when they discontinued that for CB? They eliminated
:the requirement of a commercial license to repair the CB rigs. I see
:one post that the 'codeless tech' is essentially a CBer. That, while
:untrue, does show that amateur radio is being deregulated. No, I find
:that morse code is an old technology and quite unnecessary; however,
:the Q&A manuals and the tests themselves are simply a little icing to
:obfuscate the fact that the alleged 'tests' are so simple that anyone
:could probably pass almost any class ticket within a week or so. The
:FCC really doesn't care - as long as no one complains. The happy HFers
:go on and on with perhaps kilowatts and as long as they don't bother
:anyone, no one minds. Frankly, what with the internet and cell phones,
:about the only people being attracted to radio these days are the
:people who enjoy jamming other people - that seems to be the big
:attraction. Who knows? I doubt amateur radio will disappear, but the
:combination of services does not appear to be impossible nor even
:highly unlikely. Oh well ... better start studying for proper
:operation of the new service. Hey, gotcher ears on?
:
:73s
:Jim AA2QA

I see it going the other way. Getting rid of unlicensed CBers,
arresting the outlaws and making scanner and SWL listeners
```

get ham licenses.

The cops are having big problems with drug runners using escort vehicles with scanners and out of band CBs or VHF handhelds to avoid the cops. The cops are afraid that the drug runners might get ham licenses to avoid arrest for possession of illegal scanners.

There is also the problem of foreign nationals using ham equipment to communicate for purposes of spying.

If anything the cops want stricter laws, just as with guns. And code isn't the answer as foreign nationals will be more likely to pass a code test than US citizens. If anything the cops would like to see ham radio, scanners, and CB radio banned. If the public can not communicate then they can not rebel.

The UK is having the same types of laws against scanners (it is unlawful to listen to anything that you are not licensed to transmit except for amateur radio and broadcast), guns, and restrictions on Internet communications (one must post one's true ID, MI5 must have a copy of any encryption keys, and MI5 can read your email). And the Bobbies do pull you over to check for illegal radios, guns and whether you have ag diesel fuel in your tank.

I'm a little bit confused about the following post. If the Communications Act of 1934 created the FCC and gave it exclusive powers to regulate radio, how can a state decide on its own to enforce FCC regulations? My impression has been that they can't without Congressional action. This, I understood, was the reason for the House Bill of a couple years ago that was to give such authority. However, it failed. So if it is OK for states to enforce FCC rules, why was that initiative necessary? It would seem that Indiana is looking for some constitutional troubles if they were to pursue this. Are they suffering from paranoia? Here in NC, I know of NO statutes against scanners in vehicles, nor anyone hassled just because they have an antenna on their car.

Any law enforcement officer can make an arrest for violations of
federal laws and regulations (assuming the regulation allows for arrest
of violators). It is then up to the federal government to seek a
conviction of that person in the courts.

In the past, the federal government often failed to seek convictions,
so the house bill was an attempt to give direct enforcement of federal
regulations concerning radio, without federal involvement, to local law
enforcement. That bill was defeated.

The key between the two is the level of federal involvement. Under
the present system, there is a requirement for federal involvement.
Under the failed house bill, there would have been no need for federal involvement.

A good $10,000 hot rod can do 140+ miles per hour. A $95 radio can do
186,000 miles per hour...just no comparison.

Don't forget that decent radio gear will hold its value for a long time making it possible to sell off equipment many years later. This makes the investment even more resonable. Honestly, I buy a lot more equipment now that Ebay is here, because I know that I can sell it off if I need to. I paid about $1000 for my Icom R7000 11 years ago, and I could probably sell it now for $750 or so. Pretty cheap entertainment if you ask me!

Mark you can use Pro-90 to pickup trunk system.
Not all frequency are trunked. Fire/Police/Public utils (i.e: power) are
trunked (some fire is not trunked)
everything is un-trunked.

We sure hope not !
At this very moment there is a third party company designing a digital "drop in board" that should be compatable with a couple of Unidens trunking models. Hopefully digital transmissions will be completely transparent to us and we will be able to monitor just as we have in the past with analog.

:> Only if there was a law in the US Code or a state law outlawing
:> possession of a ham radio by a non-licensed person. The comparison
:> isn't valid if no such law exists, since there is a law against
:> possession of pot.
:>
:> It's sort of like a person violating a part of the UCMJ while they
:> aren't in the military. The UCMJ only applies to military personnel.
:
:Several participants in this thread have their laws, rules and regulations,
:and levels of authority and jurisdiction mixed up.
:
:CB - no individual or station license required, but technical regulations
:are still in force and apply to anyone within the FCC's area of jurisdiction
:(USA and territories).
:
:This means that possession of an external RF power amplifier ("linear" -
:although that is only one kind of amplification and is the main type used
:for AM mode) that is designed or adjusted to work in the CB band is NOT
:PERMITTED FOR ANYONE in the above-mentioned areas. If you are a ham and
:have an 11-meter "footwarmer" and it is tuned to be maximally efficient in
:the 11-meter band, you are in violation. However, if your
:originally-11-meter amplifier is tuned to 10 meters or some other band,
:there is no apparent violation for a licensed ham operator. (The FCC might
:still ask for some form of certification or proof that the amplifier cannot
:be operated on 10 meters.)
:
:FCC has authority to regulate radios and their use all over the United
:States and its possessions and territories. It doesn't matter if any
:individual is licensed or not; the regs apply to everyone. If you're
:unlicensed, transmitting is prohibited. If you're licensed, the other
:regulations regarding proper operation and technical specs apply to you.
:
:Local police departments do not have jurisdiction to enforce FCC
:regulations. That is a Federal function, usually carried out by (depending
:on circumstances) the FCC itself, the FBI, and/or the United States
:Marshalls. A knowledgeable police officer may bring your unauthorized radio
:to the FCC or DOJ's attention, but he may not make an arrest or confiscate
:the equipment UNLESS there is a violation of some other statute that is
:within his power to enforce. If the officer knows that much about radio,
:she should also know all about the jurisdictional issues.

My state just gave local police the authority to make arrests for
violations of FCC regulations. Just as local cops can make arrests

for federal drug crimes or illegal aliens, all it takes is to have a
matching state law. Besides, we now have multi jurisdiction units
that are made up of federal, state and local LEOs that can arrest
for any crime.

:In the case of an 11 meter amplifier, a local officer could charge you with
:a relevant motor vehicle equipment violation if such regulation exists. If
:your radio transmissions are causing interference with audio or radio
:equipment belonging to someone else, you could be charged with some sort of
:"disturbing the peace" or "disorderly conduct" offense. Naturally, if you
:fail to cooperate fully with the officer to the extent required by law under
:the circumstances of your encounter, you can be charged with disorderly
:conduct or even some form of obstruction of justice regardless of
:jurisdiction on any radio issues.
:
:So, in short, while the police do not have jurisdiction over your CB radio,
:it will not be productive to rub their noses in the fact.

```
:> :>What concerns me is that we are seeing an increase of people using
:> :>radios, as guns were used before, to commit crimes. Drug runners are
:> :>using scanners and CB radios in chase vehicles to let the mules avoid
:> :>the cops.
:> . That is what
:> they are arresting people for. Using CBs and scanners to avoid
:> detection by the police. Look at this thread. Several people have
:> reported being stopped by the cops for having radios, all because the
:> drug runners are using them.
:
:Please people...those of us here that have experience with both sides of
:the dope trade are just plain laughing right now.
:
:Domestic drug numbers stations based in Indiana
: and using mobiles on CW???

Two seperate issues. The drug runners are using scanners and
out of band CBs in the escort vehicles.

The CW mobile stations are something else. It appears that
individuals of southern European heritage are transmitting some
type of number messages for whatever purpose. Given that there
are a number of Serbians in and around Chicago, who knows. But
hams have seen, and heard, transmissions while on the Indiana Toll
road.

:Hams being arrested or detained???

N9VKS was ticketed for illegal scanner usage
according to Popular Communications in the
Sept issue.

:Drug runners in and around the ham bands???
:
:And the cops in Indiana are stupid enough to believe it???
:
:First off.....
:The Indiana cops probably turned the musings of a tweaker (meth user)
:into a pretty tall tale, after finding a CB in his truck after a search
:and arrest.
:
:Second...
:NO drug cartel worth a 10 spot of crack is going to use CW (smoke
:signals) to move the product around in the states. If they are stupid
:enough to use a ham radio then they must really be amateur.
```

:
:Third...
:Ham radio operators make crappy drug runners. Do I really have to
:qualify that.

But ham radio would make a good cover for having a scanner if you
were a drug runner. Or involved in some sort of spying.

:Fourth...
:Felix Areallano and his brother can afford to buy encrypted astros from
:Motorola S.A de C.V. with no questions asked if needed.

Therefore the cops would be looking for any type of radio activity.

:> :>And it looks like someone in the Chicago area is using their ham
:> :>license to cover a spying network. Too many in the Gary-South Bend
:> :>-Mishawaka-Elkhart area are hearing mobile ham stations trainsmitting
:> :>number type broadcast, in and around the ham bands.
:
: Sunspots playing tricks.

Not when the car passes you on the toll road and overloads
the front end of your radio.

:
:> I personally saw a guy with ham plates
:> blow by me, jamming the front end of my receiver with
:> a number type mesage in CW on the lower end of 20.
:> Others upstate are reporting the same thing.
:
:Or just another idiot jammer...
:>
:> :>Therefore the cops are looking hard at anyone with a radio.
:
:At the most the cops are dealing with a major meth problem in the
:midwest and some of the tweakers have been arrested and in possession of
:some box with a mic attached...the word spread among the patrol ranks
:that "the tweakers were on CB"(big surpass eh).
:
:When the DEA and FCC start pulling over cars with antennas then you
:MIGHT have something to really worry about.
:
:There are plenty other reasons why this is nothing more than a fantasy
:in it's current form.
:
:I'm not saying that radios are NOT used...but any decent smuggler knows
:the proper use of radio equipment and freq spectrum for any give
:task.
:
:Remember they have a lot more money and resources than the Indiana cops.
:Except for the tweakers...they are poor and stupid.
:

:If you put a "tweakers suck" bumper sticker on you car, they would most
:likely leave you alone.
:
:> :The Cops wouldn't know a numbers station if it was transmitting
:> :in their car!
:
:Yah Huh....they have a special doggie for that.
:
:> There are a number of ISP troopers who are also military intelligence
:> analysts in the Guard or the Reserves. I would expect that they have
:> some exposure to signal intelligence.
:
:They can probably tune in a signal and listen...but the military is not
:really trained real well in drug interdiction, let alone domestic drug
:interdiction. The fact the police have those people on staff does little
:good if the PD does not provide monitoring hours and a shitload of
:equipment.

That is why reserve Intel folks are being put on active duty and
loaned to the DEA and FBI to help the locals. Plus if a cop is also
a member of the Guard or Reserves and is trained as intelligence
analyst then the cops get the best of both worlds. And there are a
number of cops who are 96Bs in the state of Indiana.

As far as the equipment, just hook a AOR8200 into a laptop computer.
Or use an Optoelectronics Scout.

:>
:> :And they have LITTLE authority to do anything about it even if
:> :they find such a station.
:
:And trying to prove it was used to evade cops would be fun also.

No they use it as an excuse to pull you over. Then search the car.
The radios are destroyed if you do not have a license. And you
get a ticket for a class B misdomeanor ($500 fine). Plus whatever
else they find.

:>
:> They can gun you down if you mouth off. It is called resisting
:> arrest.
:
:Jee
:In california the cops just beat you.

The California cops have gunned down their share.
One black woman who was sleeping in her car (I think
it was in Riverside). Then the LAPD was having a contest
to see who could shoot the most gang bangers.

>signal or any other type?

I'm no expert (yet), but I believe that a PSK signal is the same
frequency with the delimiter being a noticable shift in the phase
whereas the FSK involves two (or possibly more) discreet frequencies.
A circular definition, perhaps...let me attempt to refine it.

On a PSK signal, the frequency of the waveform is identical for a mark
or space, but the waveform will make an abrubt shift from where it
would normally be in a straight sine wave. The FSK will have a
completely different frequency (and visually, waveform) for mark or
space.

Hi Mark,

Toronto PF has two systems on the go in the 800 MHz. They have the usual trunking going, but they also have conventional channel assignments for each of the divisions, districts and headquarters..

Most of the dispatching is occuring on the trunk system, but at the same time most of the casual communications and pay-duty etc.. is occuring on the conventional system.

On OntScan you will notice channels that are ID'd by a channel number, those are the divisional conventional channels. Here are the channels from my web page:

FREQ PL USE CH REMARKS
==========
862.7375 110.9 Police 11 (11/12 Division)

Hey Fred;

Thanx for the reply.

No, the cars said 'Los Angeles County Police' on them. They sure
looked like Sheriff cars from the front and rear (same gold type
lettering and such), however, it said Police where Sheriff wolud be.
On the sides were (from what I could see) the words POLICE, much like
Alhambra or South Pasadena PD (or prehaps Burbank).

Anyhow, I was going somewhere around the speed limit when I saw them
(behind some rookies (new to this road)) and had no chance to speak
with them.

Again, thanks for your reply:
Bob

Hmm. This is the same type of logic that made you unfit for further
military duty.

You friggin' loon

(You know, getting delined for further service in reserves is quite a black
mark on your record. When you can't even make it in the reserves; that's
bad.)

Wrong, YOU said you were "not impressed" with reserve military duty. I have news for you, Allsafe. This country has NEVER won a major military conflict without calling in the reservests. The defense of this country & democracy depends on reservests.

>
> > Let me say this, Allsafe, I don't believe you were a Marine because

> Ah......You're worried. As well you should be.

No, I am not worried. I am simply stating a fact. I don't believe you were a Marine because Marine are NOT COWARDLY and AFRAID as you have demonstrated by NEVER posting with your real name or ID.

> I did my time in Corps
> and declined to re-enlist to pursue other employment...
SNIP

So you decided to NOT lend further support to the defense of this country by quiting. THAT is something this country does NOT need in the military is quiters, so you probably did the country a favor by getting out as they were better off without having a quiter (YOU).

> (You know, getting delined for further service in reserves is quite a

So now you are giving more details of why you had to leave military service. You have my sympathy.

Got a story, nut really funny but kinda interesting. I was listening to my local police in a small town so I turned my scanner up full blast when I heard them say "FBI was on the scene" except I couldn't really tell what they were talking about. They mentioned stuff that made me think they blocked off a certain area. I was listening for about 20 minutes but I had to go to work so I never found out what happened. Next day I look at the paper and front page news story is "Bank Robber Is Dead.. after high speed chase" Turns out the bank that the guy robbed also had an FBI office. True story, happened in Fort Walton Beach, FL. Also tonight I'm listening to what I assume is a drug bust, kinda cool I thought this town was boring but I guess not.

The PRO-26 lacks the ability to follow trunked freqs,
TV broadcasts, doesn't have alpha tagging...

It does have positive attributes but unless you are specific
in what you'd like to listen to and what features are important
to you, any answer can only be vague.

Hint:
http://www.strongsignals.net/htm/new_user.htm#SEC02

6316. 2006 LED squelch open indicator

Newsgroup: rec.radio.scanner
Date: 2000-09-17 06:45:12 UTC
From: Eddie Bryant N4UMJ <N4UMJ@carolina.rr.com>
Message-ID: <YLZw5.4325$jC4.1283134@typhoon.southeast.rr.com>
Source record: 79476

I recall seeing a mod for the 2006 or 2004 that adds a carrier LED that
comes on when the scanners squelch is broken.
Does anyone know the required parts and points within both of these scanners
to connect them.
I know it can't be more that a resistor and an LED maybe with a transistor
hooked to the proper points.
I think Bill Cheek originally developed this mod.

Thanks in advance,
Eddie Bryant

Eric, I chose NOT to give out my social security number as it could be
used to compromise credit & loan systems or other things. The SSN is
what the Navy uses, NOT the "seriel number" as you are referring to.
BTW - that should be SERIAL number!!!!!!

> There is 1 fact though, due to numerous complaints, you were terminated
> from access to the @home provider you were using. Now you are using AOL

Another one of your lies, Eric. I have NEVER been terminated from
"@home". After boot camp at Great Lakes Naval Base I spent the weekend in
Sioux City & then sunday nite returned to Portland. While in Sioux City I
was
using my a friend's access to the internet (which was AOL) & using the
Dejanews
system for posting messages.

> incidently is a violation of AOL's acceptable use policy.
SNIP

Then go ahead & report it to AOL & see what happens.

I STILL ask you Eric, what does our father's military duty have to do with
anything? Why did you need to even bring this up?

Luca,

The R-10 does support the 0x15, 0x02 CI-V command. The only thing to look out for is that it will return 1 or 2 data bytes depending upon signal strength.

Command: FE FE 52 E0 15 02 FD
Response: FE FE 52 E0 15 02 data FD

The threat to America comes not from drug runners nor from spies.

Our enemies are those that weaken our defenses by giving away
our military and science secrets and weapons plans.

Our enemies are those that give aid and comfort to our enemies.

Our enemies are those who weaken our society through divisive
politics and law.

Our enemies are those who take away our manufacturing and
agricultural base.

Our enemies are those that weaken our military by placing within
it, the unintelligent the physically and psychologically weak,
and those that hate our society.

Our enemies are those that weaken our children by forcing upon
them narcotics and unfit teachings.

Our enemies are those that try to disarm us.

Our enemies are those who oppress the citizenry.

Our enemies are those who, through acts and speech, disavow
our Constitution and seek to destroy it.

Our enemies are well known and within our ranks.

Scanners are NOT illegal anywhere in the USA EXCEPT
for a handful of states that prohibit the use of scanners
in an automobile.

>The cops are having big problems with drug runners using escort
>vehicles with scanners and out of band CBs or VHF handhelds to
>avoid the cops. The cops are afraid that the drug runners might get

Two points:
1. If the cops truly felt threatened then they'd be
asking their state legislatures to enact anti-scanner
laws everywhere. They are not doing that.
2. There are NO illegal scanners. Anyone can own
a scanner. The issue of use/possession of a scanner
ONLY comes into play if the person using/possessing
the scanner is in a motor vehicle in one of the few
states that prohibit using a scanner in an auto.
3. Only one state actually prohibits using a scanner
anywhere else but in your home (Indiana?).

>There is also the problem of foreign nationals using ham equipment
>to communicate for purposes of spying.

If that has any concern, it has been the case
for 75 or more years.

>If anything the cops want stricter laws, just as with guns. And code
>isn't the answer as foreign nationals will be more likely to pass a
>code test than US citizens. If anything the cops would like to see
>ham radio, scanners, and CB radio banned. If the public can not
>communicate then they can not rebel.

True, but no laws of that nature are being proposed.

>The UK is having the same types of laws against scanners (it is
>unlawful to listen to anything that you are not licensed to transmit
>except for amateur radio and broadcast), guns, and restrictions
>on Internet communications (one must post one's true ID, MI5 must
>have a copy of any encryption keys, and MI5 can read your email).
>And the Bobbies do pull you over to check for illegal radios, guns

>and whether you have ag diesel fuel in your tank.

This, howver, is NOT he UK and there is no
imminent or proposed radio restrictions of the type
you suggest above.

Cheers,
Bill K2UNK

6338. Mass State Police Freq's

Newsgroup: rec.radio.scanner

There is a fellow who constantly offers a CD full of radio programming software for about $80 on ebay I got a Zip file with all of the radios that are on the CD and this was included:
MAXON:
SMP4001 17JUL91 V4.30 PM150
SMP4004 V1.03c.UK
SMP4004C V2.21
PM150/S V2.07 PM150/S
If you are interested, his e-mail address is Programming2way@aol.com. I have never purchased from him so I would check his rating on ebay, but I think that it was clean when I checked it. Good luck on finding it for free on the web.

COM-SER LABS Model BR-1000A Two-way Radio Service Monitor.
AM, FM, CW modes up to 1 GHZ,
with CTCSS encode and decode,
sinad meter,
watt meter,
scope and trouble tracer.
Watt meter reads up to 100 watts.
You can test and align BUSINESS RADIOS, AIRCRAFT,
CB, AMATEUR, POLICE, FIRE, EMS and many others.
This unit WORKS GREAT, powers up, calibrates,
generates and receives ok when tested with an IFR 1200S monitor,
but is sold AS IS.

Just bought on ebay, but I have run into some problems and MUST sell.

Make an offer!

6349. IC-R10 and CI-V compatibility

Newsgroup: rec.radio.scanner
Date: 2000-09-18 00:00:00 UTC
From: Luca <icekewl@libero.it>
Message-ID: <8q54pq$9kg$1@nslave2.tin.it>
Source record: 79376

Does anyone know if the R-10 supports the signal strength readout command (0x15,0x2)? I need just this command for an application and this is the first basic receiver that has CI-V remote control capability but I am aware that not all receivers support the same set of CI-V commands so before I buy it, I'd like to be certain it does. Just to shed some light on the matter, I need to scan the 40-41MHz band that we use for our remote controlled air models and log with my laptop all the frequencies used in a file/graphically along with time and strength in order to try and investigate on relative interference problems that have occured and seek out the reason.

Thanks to anyone who can help.

Luca <icekewl@libero.it>

6350. Pro 2067 misfeature? Or error in manual? re Talk Group ID lockout.

Newsgroup: rec.radio.scanner
Date: 2000-09-18 00:00:00 UTC
From: jeh@cmkrnl.com
Message-ID: <39c96130.243883906@nntp.cts.com>
Source record: 79377

Besides the "trunking" problems I'm having with my 2067, I noticed something else in the manual, something that is reason to return the unit for a refund if true:

The manual claims

"You can only lock out talk group IDs when the scanner is in the closed mode"

(It is really the bank, not the "scanner", that is in the closed or open mode, but never mind that.) Does it mean you can only *enter* locked-out IDs into a bank that's in "closed" mode (which would be ok), or that it will only *honor* the lockouts when the group is in the closed mode?

Evidence that it's the latter (which is bad) is also under "talk group IDs" in the first paragraph on page 41, in the discussion of closed vs. open operation.

If I'm reading the manual correctly (I can't really test it until I get the scanner working in "trunking" mode in the first place, which it has yet to do; see my other recent post), this is simply ludicrous. It means I have to enter every ID I might ever want to listen to in the bank, just so I can enter one that I want the scanner to ignore! Uh, so why don't I just NOT enter the one I want the scanner to ignore??? And what if I don't know (since I'm new to trunking) which IDs I want to listen to -- but I've already found one I want to ignore? (There is a talk group around here that's keyed up a lot, but with no audio.) Who at GRE could POSSIBLY have thought that this was the right thing to implement?

As an owner of a diesel dodge pickup, let me answer this question right
away, YES, and the State police in Louisiana and Alabama will sample
your tank (been there and sampled) and if they find RED, you will be
paying GREEN to both the IRS and State Gov't. Had a buddy in AL who
decided to run the cheap stuff and was caught, his fine was $370.00 ($10
per gallon on his tank capacity) as well as a fine from the IRS on
Federal Fuel Taxes.

To support your claim, see HB 2346 which just cleared the House
Commerce Comitteee as a piece of unfinished business, does it hold
an ominous warning for CB in the US?

The FCC has prempated Scanner Laws for Licensed Amateurs, so a Ham
can't be cited but what about the non-ham?

> The cops are having big problems with drug runners using escort
> vehicles with scanners and out of band CBs or VHF handhelds to
> avoid the cops. The cops are afraid that the drug runners might get
> ham licenses to avoid arrest for possession of illegal scanners.

If the "drug runners" get ham licenses, it would create an database of
information for LEOa to track. Illegal use of short range handhelds
with
rubber duckys would be more likely. Most LEOs are not that radio savey,
so
every radio is a CB to them and every handheld is a scanner?
>
> There is also the problem of foreign nationals using ham equipment
> to communicate for purposes of spying.
>
With a little imagination it is possible on several scales:

1. Keeping local (in country) networks free of phone/hardline tracing.
(Yes it could be DFed, but not with some effort if the transmitters are
moving around.)

2. Interception of transmissions:
A. With our movable/RV community, it is very easy to move around to
monitor many
sites, venues or locations, all with a perfect cover of a camping trip.
Sophisticated
Radio equipment is able to be acquired/brought in the US under the cover
of Amateur Radio.

B. Amateur Radio Equipment, especially digital could mask sinister
deeds without
arousing suspecion.

One day in Seattle, I heard police responding to a report from an alarm monitoring company referencing an alarm in a home that had been triggered.

When the police arrive, they call to confirm with the dispatcher the address & particulars, the dispatcher responds with "the alarm company just says that the motion detector has been triggered". The police respond with," Would this have anything to do with the large black dog we can see running around inside the house? . . ."

That might not be exactly true. At the very least, it would involve a risk by the officer. If a police officer arrests me for some violation of a CFR or USC statute where there is no clear local jurisdiction, and the Federal agency with actual enforcement power declines to prosecute me, I will be suing the officer for false arrest.

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

Where do you Yanks get your info from? I blame Hollywood!

In "theory" one is not supposed to listen to police or cellular
broadcasts but everyone does or did. Analogue cellular is now a thing of
the past, all or nearly all mobile traffic is digital and the police are
gradually encrypting their transmissions. The police here cannot pull
you over on a whim, they must have a valid reason ie. a busted tail
light or erratic driving. 99.999 per cent of the population do not own a
scanner or a gun or use agricultural diesel fuel. It would be a total
waste of police time to do so. The only thing the police will check (
other than vehicle ownership and a valid car tax disc) is whether the
driver of the vehicle has been drinking alcohol or not.

In the unlikely event of a scanner being found it can only be
confiscated if the owner has it tuned to a police frequency. If the
owner has no criminal record it is usually returned with a warning after
a suitable amount of grovelling at the local police station.

6381. Radios - Putting the cost in perspective.

Newsgroup: rec.radio.scanner
Date: 2000-09-18 02:52:38 UTC
From: "David M. Hitchner" <BiteMe@Spammers.com>
Message-ID: <Wrfx5.125536$oj6.3132185@news1.rdc1.tx.home.com>
Source record: 79355

I have more equipment than some, not as much as others.
I get comments from friends, family and others as to why I
spend money on radio equipment. I recently took a survey
of the total cost of my equipment and came to the following
conclusion. Scanning/Amateur Radio is one of the more
inexpensive and educational hobbies around.

While I will not disclose the total cost of my equipment I
have acquired since 1985, I will say that is does not equal
the cost of one good bass boat, fees and cost for
hunting/fishing, building a hot rod, etc, etc, etc.

One other important thing is that this can be a 24 hour a
day, 365 days a year hobby. It does not require a particular
season or a certain type of weather. Sometimes the worst
the weather, the more interesting and useful the scanning.
When hurricane Andrew when though this area I was able
to monitor the progress of power crews and listen to local
police to determine where there were problems.

Another cost saver is that I was able to get my wife to get
her amateur license so there is no real need to use a cellular
phone. We can communicate while on the road and there
are repeaters in the area that provide phone patches to
local and state authorities.

With that said, I was wondering what others think about
the real cost involved in the hobby?

You aren't implying that it is a functional trunking scanner are you? My alinco dj-580 will receive frequencies used by trunked systems but I would never say I use it for the trunked systems if I were selling it. I use my R7000 as the receiver along with a RS 2004 for true trunked tracking, but it would be deceptive to say so in an ad sellin either without clarification.

Glenn

BTW, you are going to get flamed, smacked and attacked if you say FOR SALE or FS when you actually are FA or For Auction. Good luck

Depends what you mean by "everything" Radio Shack has one that covers a
lot, but not every frequency there is.
Depending on where you live will determine on what you need. For
example, here in Vermont, there is no need for an 800MHz scanner,
because there is nothing there for the time being.

I believe you need the European chip to receive in the cell bands
-- not a simple snip of a diode.

You can buy Sony ICF-SC1 scanners new for reeasonable prices an eBay and
Yahoo auctions now. They cover 25 MHz to 1300 MHZ (except cell phones,
of course). That's the widest continuous coverage scanner that I'm
familiar with. Others may know more.

I don't believe it does trunking systems, though.

What part of the country do you live in and what do you mean by
"everything"? Everything in Chicago is different from everything in
Vermont, as Chris points out.

Dave

The reason people choose ham radio is not because their parents are into it it is because ham radio has something magical about it. To be able to turn on a radio and only be able to talk within your town then two minuets later be able to talk to Europe and Asia is just appealing. No matter how old ham radio is there will still be people who like that magic. Answer this why do people still ride horseback when there are cars, why do people still sail even when there are motorized boats, and why do people choose ham radio over turning on your computer are all the same questions that have had people scraching their heads for a while. But in the end people seem to like what is old and challenging over what is new and easier because it is just more appealing.

Peace and 73,
KD5IJB

It is AOR JT2000 IF DSP Rx. You can find it on
http://www.aoruk.com/jt2000.htm
It scans at ligtning fast 1000 more channels per second. And fast FFT
enable
several MHz bandscope display in real time. Its software is amazing
intelligent.
Besides, you can program DSP chip to decode digital signal if you know
the language.
But it aim to commercial market. The price won't be USD 300. This is
really perfect
dream scanner.

Miller in Taiwan

Some local communities buy law enforcement from the county. If it's like the units in Ventura county the patrol cars will say police on them even though it is a county sheriff.

Personally, I like the looks of the new AOR AR8200B MK.II (I think that's what the new one is called). It has great frequency coverage and enough channels for anyone (I think 1000). If you're not looking to go quite that expensive, something like the PRO-26 will serve you fine. It has 200 channels and continuous coverage from 25MHz-1300MHz except cell, but that can be restored. For base units, you might want to wait and get the Uniden BC780XLT when it comes out. Not too sure of the specs on that one. To find out more about almost any scanner ever made, go to http://www.strongsignals.net/htm/model.htm . Hope this helps and happy scanning!

There is no scanner that does everything just yet.

If you need trunking you will have to get a trunk scanner, currently the Por-92A and the BC245XLT fit that bill rather nicely, but both of these scanners lack full band coverage, and many of the more advanced features found on high end scanners. Problem is the high end scanners do not trunk. So if you want it all, you will need 2 scanners.

For reviews of todays popular scanners check out http://www.rebel-radio.net

6418. FA: PC Computer for controlling your radios...

Newsgroup: rec.radio.scanner
Date: 2000-09-19 00:00:00 UTC
From: Bill Crocker <bcrocker@home.com>
Message-ID: <JBNx5.469$hD4.94774@news1.rdc1.mi.home.com>
Source record: 79341

For Auction on Ebay:

PC Computer System built in a high quality tower case with an Intel Pentium OverDrive 200MMX CPU, Intel Advanced/EV Motherboard with built-in Sound Blaster-16 Sound!, 64MB RAM, 3GB Western Digital Hard Drive, 3.5" Floppy Disk Drive, 16X CD-ROM Drive, Parallel Printer Port, Two RS-232 Serial Ports, Matrox Mystique, 64-bit, PCI 3D Accelerator Video Card, and 101-Key Keyboard. (no monitor, no mouse) As you can see, this is a very clean system, and everything works! Microsoft Windows 3.x/95/98 compatible! This would also make an ideal LINUX system for your home network, firewall, router, etc!

This system would be excellent for your computer programmable/controllable radio equipment, as well as running all those data modem applications!

Just a little over one day left, and currently going at only $77.51, with no reserve!

Thanks,
Bill Crocker
Warren, MI

-------- The original message -------------
I purchased WinTone 2.02 to monitor a local repeater. There
are two bugs that prevent me from using WinTone:

When using "monitoring" to record activity the file size grows. When
it reaches 7008 K bytes (at 14 minutes 57 seconds of audio) six
popup windows appear, each with the text:
"Out of memory while expanding memory stream."

Since there is more than 15 minutes of activity in a day this is a
problem and makes WinTone unuseable.

The second thing occurs when turning monitoring on, then off, then
on. A popup appears with the text:
"You attempted to call StartRecordFile Recursively!"
WinTone then exits. This is a less serious problem than the first.

My configuration is an AMD K6/233 with 160 meg of memory. When the
errors occur the system monitor shows over 100 meg of free memory.
I tried both the generic .dll file and the pentium .dll;
both behaved the same. I have active tone detection set for
extended DTMF.

Can you help out with this? WinTone is a great piece of software
except for these two problems.
Please let me know as soon as possible if you do not intend on
releasing a fixed version.

Message-id: <39BFDEC4.F024BAA3@geocities.com>

Hello everybody,

I've got this old PALCOM BlackJagur MK200III scanner
and I'm desperately looking for a modification to make this unit receive
the cellular band (40MHZ)
This is a rather old unit with a 7925PLL any hints?
I kept searching the net for hours ... no results so far.
Thanks in advance,
Andreas

Cellular phone frequencies are in the 800 Mhz band..NOT in the 40 Mhz area
!!..this scanner cannot receive or modify for this band.

Now HERE is a thread worth giving some time to.. this gentleman seems to have a good grasp of the real picture....

>

<snip introductory hypothesis>

>
> If anything the cops want stricter laws, just as with guns. And code
> isn't the answer as foreign nationals will be more likely to pass a
> code test than US citizens. If anything the cops would like to see
> ham radio, scanners, and CB radio banned. If the public can not
> communicate then they can not rebel.

EXCELLENT point... fact is, most governements GROW, they do not RECEDE... until they ultimately suffocate themselves and thier constituents (subjects, citizens, etc)... Point well taken; if anything, there will probably be STRICTER inforcement of it's use. This is not to say STRICTER licencing (do NOT get the two issues confused).

>
> The UK is having the same types of laws against scanners (it is
> unlawful to listen to anything that you are not licensed to transmit
> except for amateur radio and broadcast), guns, and restrictions
> on Internet communications (one must post one's true ID, MI5 must
> have a copy of any encryption keys, and MI5 can read your email).
> And the Bobbies do pull you over to check for illegal radios, guns
> and whether you have ag diesel fuel in your tank.
>
>

I remember when, in the formerly communist Soviet Union, an individual was once arrested for possessing and UNLICENCED memograph machine. The western free world LAUGHED at this, pointing out that this was the very reason that the eastern red block wasn't going to able to keep up with us more "enlightened" capitalists and western idealists... but years later, after the dust has settled from the iron curtain's demise, look where we ourselves are going.....

Indiana code makes it illegal to posess a "portable police radio" anywhere but in your residence or business.

A number of persons are xempt from the law.Among those are anyone posessing an Amateur Radio License. I cary a copy of the current section of the Indiana code in my vehicle.

The police officer making the bust was obviously unaware of the exemption.I have been questioned on it several times as I have bolted a scnner into my cars since about 1983

Both XLNT tracks...FWIF there is always a speedway scanner vendor on site at both places and they usually sell a frequency listing card for $5.00 or so but give them out free with a scanner rental. So you can buy one or you can copy the freqs from somebody that has a rental scanner or you might get lucky and somebody will post the freqs here.
Good Luck
Neal
Anaheim,CA
PS-I once got to lap Indy, drive to Speedway and lap the entire park on the makeshift 'roadcourse' tour, drive down Speedway's quartermile, make a couple of laps on the small oval and drive back over to Indy and do a couple of more laps. All in one day. I was with some Pontiac big wigs and no racing or events were going on at either track on this particular day. I recall Speedway Park's hospitaliy as being as some of the nicest I've ever experienced anywhere.

Yes, you're right, i didnt remember that cause i've not played with
PCR-1000 much as i've played with handheld scanners.

>> > > All wide band scanners what i have, have bandpass filtering!!

>> > NO !!
>> > Have a look into some commercial equipment from Siemens or
>> > Harris......
>> > They have discrete IF-filters on the last stage working below
>> > 50khz.. !!
>> Well, my know ledge about those is really small.
>> I've played just only toy's like Yupi, AOR, Icom, ect...
>
>So do not talk about R&S.. :-)
I mean, i havent rip it to parts like i've done all those scanners what
i mentioned before.

If i've used radio, i dont say i know it well, if i've repair it, i can
say i know it bit better. =)

R&S are too expensive to play with in my way.... ;-)

Actually i have 7pc's of MVT-9000, regular, different modified versions
ect.
Couple AR-8200 (mk2 and older versions), AR-8000, AR-3000, AR-5000 (i
sold my AR5000 while ago)
All uniden handheld scanners....
couple IC R-3 (pal/ntsc) R-2, R-10 ect...

Actually i own more than 40pc's of scanners right now and i have
collected more than 100pc's of radio equiments (i work in bandercom
technical department, what is now named Mikan Tech)

Regards
Mika

> Sounds like you may be receiving signals from multiple transmitters/repeaters..

The CHP systems that use the repeaters in 39mhz are prone to phasing problems when simulcasting. It's a real bitch in parts of San Diego knowing that you should be getting a fat signal and it sounds like multipath crap.

In Santa Cruz county the 42mhz system goet to repeater when it "emergency traffic only" the signal seems to be a bit more stable. The VHF system thst the Santa Cruz Sheriffs use has a really tough time simulcasting off multiple sites.

They have sent 3 to me in New Zealand.

Use a credit card.

Absolutely nothing to worry about.

Make sure to use clear English in the text.

I was quoted in US dollars in the last order, but
was charged in EURO $.

Cost me $28 NZ extra, told them and they apologised.

The reason was the new computer system uses the Euro
currency base, could have told us about it all the same.

Well Chris,
I work as a driver in Indiana and we all have radios in our pizza cars. We deliver a lot of long distance pizza in bulk and small orders too. We have many unmarked cars so we can stay "undercover" from the robbers. Most of the other drivers are from eastern block countries. One of out drivers buys all the radios for the other drivers, they are made by a companys called icom and yasue and kraco. We change frequencies every day for security reasons cause Serge our U.S. boss says it keeps the other fast food managers from listening to us. When we can't hear the main order center in Bogota...they send us a special version of that telegraph code stuff like in the old train movies.

The pizza chain I work *was* going bankrupt after a chain of arsons and some "bad business deals" but our boss met Mr.Serge (from Ukarine) and bought a bunch of used radios and business was bitchin and we all got real *big* raises overnight.

The only downside is we get pulled over by the cops an awful lot for some stupid reason ,and when we are running 3 pizza cars and a semitruck full of pizza it gets pretty annoying...but we just give them a slice from our special *VIP BOX* that is a apecial pizza that we are allowed to just give away to any cop that hassles us. Usually though our armed security guards (pretty cool 'eh) already know the cops so it works out pretty well.
>
> Chris
> I will never tell if this is my real name or not so there :-P

That's fine bro....But we have a pizza that cost $17,000 and has all the toppings except for ham. I deliver about 60 a day but I'm not allowed to taste it or even open the box.

I will take home about $120,000 this year just to deliver pizza and they tell me I could double that if I learn spanish and move to the home office in Muncie.

So keep you I.D. a secret and see if I ever give you a piping hot slice 'o pizza from the ViP BoX.

Mark
Not my real name since my real name is Bobby Knight.

Geee thanks for pointing that out!

Hmmm. Well, the first Microcounter I got from Optoelectronics was almost dead. I shipped it back for an exchange for the good one I have on auction. The exchange process took several weeks and required expediting phone calls. So, you could say eBayers find an extra value in buying my used but proven Microcounter. :)

I assume that most of the new ones are OK, but I have traded email with someone else who got a bad one and went through the same process I did to get a good one from Opto.

You failed to mention that the optional antenna is another ten bucks....

Dave

Just an update on the Jason Webb fraud alert that I posted about a month ago on the Strong Signals for sale board. Basically, the story is that Jason was selling an AR8200 scanner on the Strong Signals for sale board about 2 months ago. I responded to Jason's post and I, being a trusting person, agreed to buy the scanner from him, and sent him a $300 postal money order in advance. To make a long story short, I never received the scanner, and heard nothing from Jason at all, until about 3 weeks ago. In an email, Jason said that he was sorry for the misunderstanding, and that he would refund me the money. It has now been 3 weeks since the last email from Jason, and a total of 2 months since I originally sent him the money, and still no scanner, no money, and no emails from him either. I am now filing a fraud complaint with the US Postal Inspection service. It's unfortunate that it sometimes has to come to this, but buyer beware. I've learned my lesson.

Adam

Slightly off-topic, but maybe one of y'all can help:

I'm looking at purchasing a used Handspring Visor. There are two versions of this personal organizer: 2MB and 8MB. But how do you tell them apart? The 8MB verison is marketed as "Visor Deluxe", but I believe it just says "Visor" on the unit, as does the 2MB version.

Anyone know for sure how to tell 'em apart?

BTW, this isn't *completely* off-topic because I plan to use the Visor in part to store scanner frequencies :-)

I have on Ebay for auction one VHF/UHF/Air/800 MHz 100 Channel Race Scanner. I listened to the trunked channels in my area with this. Also has function for setting channels for cars at any race that uses radio's.

Check it out. It's in great shape and works. Just don't have the time to listen anymore like I used to.

I think Tracy has it right. LASD does put both Los Angels County and police on the units that are contracted out to various incorporated cities. Malibu is a good example.

Since Angeles National Forest is a fed area, I would think LA County parks would not be servicing that area.

Actually it's quite a simple modification to do. All you have to do is solder a wire between two diodes (I think that's what they're called). Go to www.mods.dk for more info.

6475. Sony Digital Phone (no DSS) Secure From Scanners?

Newsgroup: rec.radio.scanner
Date: 2000-09-20 00:00:00 UTC
From: SG Investor <sginvestor@my-deja.com>
Message-ID: <8qb6sa$hs4$1@nnrp1.deja.com>
Source record: 79229

Hello,
Forgive me if this is the wrong group to ask, but who better to ask than the scanner experts here? Anyway, I just bought a Sony 900MHz Digital Phone (no DSS), model SPP-ID970, and was wondering if this phone was secure (unable to be heard by most scanners)? On the box, it says "Digital Privacy and Digital Sound Quality: - Digital speech encoding virtually ensures private, secure conversation between the cordless handset and base unit. Digital technology achieves amazing sound quality." Does that mean anything? Can they say that and still have one end of the conversation (base to handset or hand set to base) be in analog (which everyone can hear)? Also, has anyone had experience with Sony Phones - Good or Bad?
Thanks for your time and help,
SG Investor

6477. scanner interference help?

Newsgroup: rec.radio.scanner
Date: 2000-09-20 00:00:00 UTC
From: emoney250@aol.com
Message-ID: <20000920181017.07824.00000041@ng-da1.aol.com>
Source record: 79231

I am using a magnet mount Radio Shack antennae on my big rig. There is no metal on the roof to secure the antenae to. I use duct tape. I was getting a 'hiss'/open mike sounds on 42 mhz frequencies (CHP in Cal). It only did it some times and not on the same 42. mhz channels (no consistencies whatsoever). Today, I ran a little black wire from the antennae to a bolt. I am hoping this helps to 'ground' the antennae and gets rid of the problem. I was wondering if my scanner being next to the dash of the truck (with all the electrical devices operating possibly ommiting RF signals interfering with the scanner) was the problem. If it is, is there any way to better 'insulate' my PRO-91 to keep out the RF signal interference?
I am a very seasoned scanner user, but not an electrical technician. By the way, when I use the magnet mount on my car, I get great performance.

Thanks to anyone out there for the help.......
Eric G.
ignorance is no excuse.....

6478. Re: Pro 2067 misfeature? Or error in manual? re Talk Group ID lockout.

Read More,
You can lock out specified ID's by specifying them.
As for trunking problems leave it in open mode, if possible put that trunk group of freqs in their own bank. Specify each freq's mode! Then hit func-trunk on that bank and MODE and select the MODE they all use.
Unlock any locked out control freqs.
It works.
"Jamie Hanrahan" <jeh@cmkrnl.com> wrote in message news:39c96130.243883906@nntp.cts.com...

I used to have an old Bearcat 250 with a useful feature.
It could scan a group of frequencies and log how many times it found a
signal on each freq. You could review the list and see which channels were
the busiest.

Does anyone know of any more recent scanners that have such a feature?

6495. FS/FT: AOR AR8000 Handheld Scanner w/RS-232 serial interface

Newsgroup: rec.radio.scanner
Date: 2000-09-20 01:14:31 UTC
From: Robbin Olson <rolson@mcg.net>
Message-ID: <39c80fda$1@news.mcg.net>
Source record: 79270
Cross-posted to: alt.radio.scanner,rec.radio.shortwave,rec.radio.scanner,rec.radio.swap

I have an AOR AR8000 Handheld Scanner (Receiver) with a RS-232 serial interface which can be used for programming and computer control.

The AR8000 is a highly sensitive hand-held receiver boasting a very wide frequency coverage of 500 kHz to 1900MHz without gaps in the range. Step size is programmable in multiples of 50Hz for smooth tuning. The all-mode reception provides, AM, USB, LSB, CW, NFM and WFM. As you might expect from a radio receiver of this calibre, an independent 4.0kHz SSB filter is fitted as standard and the USB/LSB/CW modes use true carrier re-insertion with correctly calibrated frequency read-out(not offset by 1.5kHz). A ferrite bar antenna is neatly internally installed at the top of the receiver's cabinet to enhance receive performance when listening in population centers to Medium Wave services or when commentary is provided at airshows and motor sport events.

This receiver is in excellent condition with a only a few small wear marks on the finish on the back side of the case where it rested against something. This is very minor and hardly noticeable. The front and sides show no visible signs of wear. All buttons and printed markings are clear and intact. There are scratches on the display. I would rate it an easy 9+ on a scale from 1 to 10. All original documentation and packaging is included. Also note that I am including an RS-232 serial interface for computer control/programming.

I am asking $350 for this scanner and interface. . . or I would consider a trade for a Pro-2006 that is in mint condition . . . or what have you?

Please contact me via e-mail if you are interested. Thank you for reading my posting.

Can't (and really shouldn't) shoot the messenger. Radio is a first rate chicken-shit outfit to work for. First off, they make you work for minimum wage. They promise you "Spiffs" a monetary reward for going over a set amount of sales, but spread over the entire 8 hour day. If you start the day with a big sale, like a complete computer system you are "UP" for a while. But if the rest of the day is regular small stuff you sink back down to the regular minimum wage. Besides area managers that are trained by the wrecking crew in Ft. Worth TX to get the max out of you the carrot is always dangled far above your nose.
If your a manager....you try hard to improve your store, your staff and get to know the locals right? The reward for this is your transferred to a store that is NOT doing well, so you can turn it around and some real "boob" is given your store because he is not capable of making his own fly.
Add all this up,stir in disgruntled employees sprinkle with outdated shit with new faceplates (Optimus brand is rebadged Pioneer equipment) and bring to a boil. It's no wonder that they are know for the slogan "You have questions...We have batteries".....all in all.....Radio Shack has a lot to learn.

6497. Where are the Pro-92A scanners

Newsgroup: rec.radio.scanner
Date: 2000-09-20 02:36:33 UTC

I've been hearing a lot about this new, improved Pro-92, called the 92A, but where the heck are they?

Grove doesn't have them yet. The Rat Shack drone looked at me like I had two heads today when I asked about it at the store.

He just got in a new shipment, and they were all old 92s...

WHat gives? WHERE ARE THEY?

Dan

6498. New and old 245 XLT

Newsgroup: rec.radio.scanner

How does one distinguish between the old 245 XLT, and the new,
improved 245 XLT?

Which dealers are selling the new version?

Dan

Uh hunbh!
then why the big sdpeal about it being a state secret?
by making such claims, all you do is set yourself up
to look like a loony tune (which you appear to be
most of the time)

Secondly, I don't believe you are currently in military service.
your assertions to such appear to be because you were
terminated from the @home network for abusive behavior.

Still, I think this arguement has gotten old and I have said the
last words on it I am going to say.

Hi Dan!

I'm not sure how you tell them apart. I think there is a keypad procedure you do, while turning on the power, and it will display the firmware version.

I can tell you this, Grove is selling the newer ones, without the 5 second delay.

Check here...
http://www.grove-ent.com/

Did you call Grove? Bob's showing them on his web site, and not only that, he's $60.00 cheaper than Radio Shack themselves!

http://www.grove-ent.com/SCN46A.html

The difference between the two is that the PRO-92[a] uses the trunking control channel to follow the system, similar to how the Uniden Bearcat BC245-XLT does it. The original PRO-92 followed the trunking system via a sub-audible carrier in the audio.

Most Radio Shacks should have the newer one in stock by now, but they're not on sale, you'll pay full price! The date code, located on the back of the carton's lower right corner is: 05A00, and to be double sure, look at the back of the scanner itself, the catalog number should be: 20-522[A]

btw,
I forgot to ask....

What is your MOS?

Were you prior military (since you appear to
have completed basic so fast)? I understand that the
MINIMUM time required for Basic is 8 weeks!if are
in specialized training, then expect an additional 8 to 16
weeks (depending on the MOS).)

so, you've supposedly been in 2 weeks.. thats not long enough.
Also, checked your statement... there is no such thing as an
AGP program (I would like you to explain what this is.)

Gee, given all of this, I might just forward all your commentary
on the USN/reserves to a local navy recruiter and obtain an
opinion from him as to what is what.

if I decide to do this, I will post an exact copy of the letter
obtained from said recruitter here.

btw, where are you supposed to report for basic?

6507. New CHP Channels

Newsgroup: rec.radio.scanner
Date: 2000-09-20 03:14:53 UTC
From: chuck@NOSPAMlatraffic.org
Message-ID: <39c92b8c.84085791@news.earthlink.net>
Source record: 79282

It seems the new Orange County Purple-1 (Santa Ana) frequency 39.44 is now in use. I've monitored the traffic and this channel seems a bit odd. It seems that sometimes dispatch is coming off of the repeater and sometimes not. I say this because sometimes I hear dispatch loud and clear and other times I have to turn squelch way down to hear them.

I've also noticed that sometimes I can hear the officers in the field and other times I only hear the dispatcher. I wonder if there is a new repeater system at work here or if things are still in the testing phases with live traffic on the channel. Maybe they're using a zone based repeater system? Just a thought but it sure seems that way.

Oh well, if anyone has made any observations please let me know what you've found. As usual, they're using 162.2 Hz PL tone as they do on all Border Division channels.

Pizza Hut doesn't use radios either. The drivers use their own car for
delivery and that would make it difficult to install a radio every time you
worked. I worked at PH for 4 years. The situation is the same here. Pizzas
are made at the store at an individual order basis. There are no extra pizzas
in the car. We leave the store with the pizza, deliver to the house, and
return to the store to pick up another order. No need for radios.

markj wrote:
>Round Table in Prundale Ca. has VHF radios also.

This is very unusual. A small pizza store that's not part of a national chain
might do this. However, the great majority do not have radios and the driver
uses his or her own car.

My SPPID910 is secure from scanners. All it sounds like on my scanner is a
"whining" noise when the phone is on. Also, every few seconds the phone
and base send a "handshake" signal back and forth to one another. There is
no way anyone can hear traffic from that phone.

BLIMP FILE
Update: June 1997

It's time for another update of the BLIMP file. Last
report was February 1997 and since that time I've received
new information from a number of monitors who have kindly
shared their data with me.

I do most of my blimp watching while on a beach either
here in New Jersey during the summer months, or in Pompano
Beach FL while visiting my Mom. Since one airship is
stationed right in Pompano, there is almost year round
activity in that area. While there, I always monitor the
Goodyear blimp and watch for its activity.

These are the frequencies I've recorded [again as of
February 1997]:

151.6250 Airship 3-Alpha to Office
125.4000 Pompano Tower
250.8000 Airship 3-Alpha to Pompano Tower
[Pompano Tower was not heard responding here]

The following additional frequencies have been heard
and/or posted over the years:

123.0250 GY Blimp to Ground [NY]
123.0500 GY Blimp to Landing Area [NY] [port frequency]
123.0500 Fuji Blimp
123.0750 GY Blimp to Landing Area [NY]
123.2500 Blimp to landing area [JFK-NY]
Suffield (OH) Wingfoot Lake Facility
Fiji + GY Blimp
125.2500 JFK to Blimp
132.0000 Goodyear Tire & Rubber Company channel
[NYC] N-1-A KCA-186 [1-ALPHA]
GYB used to cover racing

145.5500 2 meter used from Blimps
151.6125 GYB used to cover racing
151.6250 Blimp Operations NBFM
GY to Ground Crew [NYC & Pompano Beach]
151.6400 GYB used to cover racing
151.6725 GYB used to cover racing
151.6850 reported GY Blimp to Office
158.4600 GY
217.4500 GY
250.8000 GY Blimp to Pompano Beach Tower and another
airship in Florida
461.8000 GY
462.2250 GY
462.2750 GY
462.4250 GY
463.0375 Metlife Blimp
463.7125 Metlife Blimp
464.0500 WIK-777
464.5500 Simplex DPL-172 GULF (Oil Corp)
Pilots have British Accents.

464.5500 Gulf Blimp
465.8875 Metlife Blimp
465.9125 Blimp Operations NBFM - Low Power 465.9125 GY
465.9375 Blimp Operations NBFM - Low Power 465.9375 GY
465.9625 Blimp Operations NBFM - Low Power 465.9625 GY
466.0375 Metlife Blimp

There was a question about the use of 217.450 and 250.800
by civilian entities. These reported frequencies are
military frequencies. 217.450 was reported in an early
blimp file. I have personally monitored communications on
250.800 as indicated above. A monitor reports that even
when the GY airship was stationed at the Glenview NAS near
Chicago in 1995, only civilian channels were used. The
last time he had an opportunity to examine the radio
stack, there was no evidence of military or UHF
capability.

Robert Wyman looked up Pompano Beach in the IFR directory,
and as I suspected, there are no UHF air listings. So I'm
fairly sure now, and Robert concurs, that the
communications heard on 250.800 are a harmonic on the
posted tower channel [125.400 x 2= 250.800-curious
coincidence?]. The use of 250.800 has not been reported in
any other area of operation. The US DoD IFR Supplement
book, which contains all airports which can easily support
military traffic, does NOT include Pompano... only Fort
Lauderdale International and Fort Lauderdale Executive.

I understand that there are three Goodyear Airships [Blimps] in operation in North America with a fourth in operation in Europe. The American blimps are stationed at three locations: one on each coast and one in-between. The AMERICA, tail number N3A, is based in Pompano Beach FL [formerly in Houston, Texas], the COLUMBIA, tail number N4A, is based in Los Angeles, and the ENTERPRISE, tail number N1A, which was in Pompano Beach, Florida, is now in an unknown location. [It was reported to be near Houston TX, but that has been shown not to be true.] Each blimp is accompanied by a three vehicle ground fleet consisting of a van, a tractor-trailer, and a Greyhound-like bus. The communications between the blimp and ground crew are normally held on 151.625 Mhz.

While in Florida, the Goodyear airships generally work VHF tower channels up and down the coast while in enroute to various media sites. While on station, they monitor the tower which controls the airspace they're in. This fulfils their "required" air traffic control function, but more often than not, the tower will just give advisories about the blimp to other traffic, and you'll only hear the blimp when entering or leaving their orbit area.

While on station, the blimp itself will talk to other aircraft on a unicom or "chatter" channel informally used for the specific event. 123.050, 123.450 and others are used for this, and it allows the blimp, helos, and banner-tow aircraft to talk on the same channel. Again, this is the air traffic control function. Some sites, like stadiums, always use the same unicom frequencies during events.

The next function is more adminstrative than anything else. Goodyear has used those 465 MHz freqs for "company" information between the ground support staff and the airborne staff, including ground ops. at the landing zone. Other airships, such as those operated by Airships International, use other business band freqs for the same purpose.

Finally, the media crew will use everything from point-to-point microwave, to the standard VHF/UHF "remote broadcast" channels, to any one of the UHF itinerant/low power channels for media production, cueing, audio feeds, etc.

I have a report from a monitor that in December 1996 the AMERICA [N3A] was flying in the Pompano Beach FL area. A local TV helicopter and newscrew were along doing a story on the blimp. They used 132.000 the whole time. The reporter was on the blimp, and the videographer was on the helicopter taping the reporter. The reporter talked over

132.000 to the cameraman who recorded the audio [their wireless mics didn't work].

132.000 is an AIRINC frequency licensed in Pompano Beach under callsign WDF8. All of the licensed AIRINC freqs in this area were monitored but the the blimp was only heard this one time. A Transway International plane was also heard. The frequency is also licensed in Fort Lauderdale.

Another frequency to watch is 129.625...the banner-tow aircraft from North Perry have been on this channel. It's not known if this is new or old, an AIRINC license or what; it is being used as an air-to-air.

In the continuing Blimp saga....
Other sightings:

Sunday 10 September 1995, I saw a Budweiser airship flying north/south over the beaches of Monmouth County New Jersey. I think that I heard some comms between this ship and another blimp or airplane. They were using 122.850 [this frequency is commonly used by skywriters along the New Jersey shore.] I have no idea if this is a usual frequency for this blimp.

The blimp was silver and red and I could not see the registration number but I believe that the tail fins said RED ONE. There was a strong westerly wind and the ship was having great difficulty moving. It was tacking, much as a water vessel would- back and forth- east to west. It also seemed to be fighting strong downdrafts since the ship would tilt forward by perhaps 10-15 degrees [a guess]. It went from the north to the south, returned northward and then south west to [again a guess] Lakehurst or Mc Guire AFB. No other comms were heard. All previous blimp frequencies were monitored while the ship was in sight and a search was made of the VHF air band at the same time. Has anyone heard comms from this ship?

The Budweiser airship was seen sharing the skyline with Met Life over downtown Chicago in May 1996. It id-ed as BUD-1. The Goodyear blimp is in the Chicago area several times a year, although it will no longer be at Glenview, which is now closed. There was speculation as to where it might go. Among the places named were Midway, O'Hare, Palwaukee or perhaps Waukegan. Anyone in Chicage have a report?

A new blimp was launched in June 1996 in Atlanta, GA. It carries the Kroger logo and is the possibly largest blimp now in use. Called the Spirit of Atlanta, inital reports had the blimp in use to follow the Olympic Games. It has

since be reported that it will be used as a police surveillance aircraft. Seems that Kroger was not an official sponsor of the games. A banner with the words "Atlanta Police Department" will be hung over the Kroger logo.

In May of 1995, the Marlin's Airship [white with pinstrips] was also seen off the coast at Pompano Beach FL, but no transmissions were heard from them. At one point as both airships were over the ocean, 3-Alpha called to Marlin on 250.800. A reply was received that I did not hear and a second message was sent from 3-Alpha to both Pompano Tower and the Marlin Airship. Does anyone know where the Marlin's ship is hangered and what frequencies are used? I was recently advised to also try 120.700 for general blimp traffic, although I have yet to hear anything on this frequency. A message was also posted that all blimp activity in Florida is on low power, non-repeatered itinerate frequencies used for short distances. These frequencies reportedly change daily.

In South Florida, the ships are re-worked each season [it seems] with new sponsors. They've had the Dolphins/Marlins/Panthers blimp, the Family Channel blimp [lightship] and others. Orlando has the Sea World blimp which sometimes comes down here too. In previous years, Bud One, Fuji, McDonald's, and others have been in town.

Regarding some of the blimps mentioned, it was suggested that a search by N-number be done. This would show who is really operating the corporate-sponsored ships.

Planned blimp activities in Florida this year included golf tournaments at Weston and Doral in late February, the Grand Prix in Homestead [also February], and the Lipton tennis event in March.

Yes it is illegal to have scanners in your vehicle in NY state.. Usually when I get pulled over or cross the border into the states I usually put my radio under my seat as a precautionary measure.. better be safe then sorry but I dunno what would happen if the officer noticed you radio.. I guess it depends on the decretion of the officer..

Of course, putting something under your seat during a traffic stop won't
attact undue attention. <G>

While I can't answer specifically on NY, in general states exempt licensed radio amateurs. In some backwards states hams were be arrested for having a radio in their car that was capable of public service communication. With general coverage receivers on ham vhf/uhf transceivers being common, this opened the door for such foolishness. As if an average officer would know anything by looking at a radio anyway. There was a big problem in, I think it was South Carolina a few years back that brought up this issue for many.

LOL.. oh right.. that would look kind of fishy wouldn't it.. :) I haven't had any problems YET.. :)
What can the officer do if they find a scanner in your vehicle.. can they legally confiscate it and there will be no way of getting it back? Oh ya I believe if I am not mistaken Amateurs are exempt from this law.. and that goes for almost anywhere where they have that law but I am not sure for the rest of the states as I don't live in the states but do travel through NY often but I am sure about the exemption in NY

Several places sell internal batteries for around $22.50 plus about $5
or so for shipping. That's a bunch less than the Icom price. Battery
dealers usually list them in their amateur/2-way radio section under
Icom model IC-2SA, which is a ham radio that was built in the same
case as the R1.

But first, check for crud in the charger jack. There is a tiny switch
in there. If it is stuck you won't be able to run on battery. Also,
there is a circuit board in the bottom of the unit that controls
battery charging. There could be a problem with it. There are switch
contacts on it that detect whether or not an external battery pack is
installed. It also has the usual wires that break, etc. You might
want to have a look at it before shelling out $30 for a battery or
even bigger bucks for a trip to Icom.

That squares with my impressions. The 92 was a complete washout for me (tired 2 of them), but the 92A seems to pretty much have it together trunking-wise. It does seem to be very picky as far as signal strength is concerned. It seems to require a very strong signal to keep following the control channel. When the signal is marginal (and that can be a problem with 800 MHz transmissions from some distance - i.e. from suburbs or in hilly areas) it can lose the "lock" on the control channel and the "ID Hold" feature goes all to hell. My brief experience closer to the transmitter didn't seem to show these problems.

I've noticed bigger problems with signal overloading and wanting the
attenuator on. A big pain in trunking, as you'll end up with some ATT
and some not. The AGC for strong signals sucks, to put it frankly.

Without a proper ground palne, the outside of the shield on the coax will act as
part of the antenna, picking up all kinds of engine and auto computer noise.

Hey Joe - why do you post your auction as a reply to another auction?
Wouldn't be trying to divert traffic to yours that happens to end first
would you?

By the way the RED text in your auction that states what is included
says "BC9000XLT", so when I win you auction, that's the one you'd
better send me! (if you want to send along the 3000xlt as well, feel
free)

Sent via Deja.com http://www.deja.com/

For Auction on Ebay, with only 15 hours to go, and currently at only $53.00!

Radio Shack PRO-2021 (Cat #20-113) 200-Channel Programmable Scanner Radio. Direct access to over 23,000 frequencies, in nine different bands, including Aircraft, Ham Radio, Police/Fire, etc! It also has a Priority Channel feature, which automatically checks for activity on a special channel, while scanning other channels! You can also store up to ten new channels while doing new searches! Large multi-purpose LCD shows which channels, and frequencies are being scanned, monitored, or programmed, as well as the status of the channels and the operation mode! Scanner is very easy to program, and operate! Includes channel lockout with built-in skipper circuit! Scanner has built-in speaker with 1.5 watts of audio output. It also has jacks on the back for an external Antenna, Speaker, 12VDC power, and Tape Recorder! Scanner comes complete with original box, user's manual, antenna, 120VAC power cord, 12VDC mobile power cord, and mobile mounting bracket! Scanner has sturdy metal cabinet, un-like cheap plastic scanners of today. Unit is in excellent condition, with bright back-light, and works perfect!

6548. FS: Pro-43 w/Cellular & Low Band Restoration

Newsgroup: rec.radio.scanner
Date: 2000-09-21 00:00:00 UTC
From: Robbin Olson <rolson@mcg.net>
Message-ID: <39c9676f@news.mcg.net>
Source record: 79160
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.swap,rec.radio.shortwave

I would like to sell my Pro-43 which has both the cellular (870-890 MHz) and low (51-88 MHz) band restoration. This scanner is in very nice condition with a few small scratchs on the case and a few wear marks on the finish. I do not know how to better describe it. The marks are nothing more than from normal use and nothing is really very noticeable at all. The crystal is scratch free and all wording and button identification is clear and wear free. The scanner will include the Owner's Manual. Additionally, I will include the Service Manual for the Pro-43 scanner. There is also a carrying case that works well with the unit, although it is an aftermarket generic carrying case and not specifically made for the Pro-43.

I am asking $225 plus $5 for shipping, but I will entertain offers if I do not sell it at this price. I am also open to a trade for shortwave or scanner equipment. I would be very interested in a Pro-2006 or a AR3000A trade of some sort.

Thank you for reading my posting.

R. Olson

Yes, but only if the bank is in closed mode, which means you also have to
specify the ones you *want* to listen to. That makes the ID lockout
nearly useless -- except for temporary lockouts of normally-desired IDs.

It would be much more useful if there was something "in between" open and
closed mode, in which the scanner would honor ID lockouts but would simply
let you hear all other IDs.

A one-button way to lockout the ID currently being heard would be very
useful too.

>As for trunking problems leave it in open mode, if possible put that trunk
>group of freqs in their own bank. Specify each freq's mode! Then hit

>Unlock any locked out control freqs.

Did all that. That exact sequence, and many, many variations.

>It works.

Not on mine it doesn't. Or "didn't", I should say; I took it back for a
refund.

Daniel ~~

There are plenty pf 92A models to be had. My local Radio Shack stores have them in the East Bay (San Francisco) and on the Peninsula, Scanners Unlimited has them. The prices are all list - $350. Yuk!

But I bought one anyway because Grove, who advertises them on theeir web site for $249, says they won't have them for a few more weeks.

I bought mine from Scanners Unlimited (San Carlos, CA.) and I was told that for out-of-state customers they will ship them without tax added. They have a web page but I don't know it - do a search and it'll pop up.

I have noticed that some of the Radio Shack employees are totally unaware that the PRO-92 they stock is, in fact, the 92-A.

The box still says "92", the front of the case still says "92" but you can tell if it is 92-A by looking at the metal ID tag on back of the radio itself. Next to the RS catalog number is an "A" enclosed in a square. If that "A" is there then it is a 92-A.

So check to be sure.

I have had scanners for a looooooooong time but this is the first trunking radio I have owned. My local area agencies just went trunked three weeks ago and this radio follows the conversations just like my old scanner did before they went to trunked systems. I found that an outdoor antenna helps if you live in hilly area.

The owners manual is CRAP! I played for two days and never got it scanning trunked freqs - then I stumbled upon this step-by-step website and then had it working fine in ten minutes:

http://www.pro-92.com/gettingstarted.htm

Have fun!

The other dirty secret about the Pro-2067 is that you cannot HOLD on a trunk ID unless it is displayed on the screen. Then you have to press and hold the TRUNK key for a couple seconds.

And even then, all the display shows is ID LOCK (or something similar) and NOT the trunk id or alpha tag of the channel being held.

Very weird.

How about all the standard noise that comes in daily on all the
channels:

a) 911 hangups
b) False burglar alarms
c) Lift assists

I swear that 90% of the effort of the departments have to be devoted to
those types of calls.

Of course it is the other 10% that makes monitoring worthwhile.

The Hy-Gain "slider" was designed to plug into a jack in the rear of
certain Hy-Gain radios. When activated, it allowed the RECEIVER to tune
through the bands. Since, out of box, it did not allow VFO on transmit,
it was considered legal. However, cutting just one wire inside allowed
it to function on transmit as well, which is what most people, who owned
them, did. But THAT was definitely NOT legal.

I've had this scanner for quite awile sitting in a closet
It's down side no freq setting save Ie.. power goes out you have to
reprogram
unless you use a 12 volt batery to power it contiously

I have no manual for this scanner
once I knew how to set the scan high and scan low freq settings
for the freq find function (scans from low freq to high freq searching for a
signal).

Anyone remember how?
or have a manual?

please reply to dcnnr@sover.net

Doug

I have an IC-R1 that fell into a puddle for three seconds. I quickly dried it off, opened it and cool-air dried it with a blow drier on cool air setting. The radio worked well for the next few hours till it was time to recharge the batteries. However, plugging in the charger for the fifteen hours recommended did not charge the batteries at all. The batteries are totally DEAD! The radio still works with the adapter but... Is there any way to rejuvenate the batteries, and if not, where can I get a replacement pack for a reasonable (Cheap) price? Any assistance in this matter is greatly appreciated. Please e-mail me directly as I don't always get the chance to read this NG.
Thanks.

I have recently acquired a Uher Report Monitor 4400 tape recorder
that I plan to use in conjunction with various ham-related projects.
The problem is that I do not have a manual and need information on
the pin-outs for the various DIN connectors on the recorder. Can
someone supply me with that information? I would also pay for
copying a manual if someone was willing to do that.

tnx es 73 - John, W4AU

Source record: 79189

Hello--

Sorry about your R-1. The R1 has and internal charging circuit and possibly the water shorted it out. It has its own battery (ala a CMOS battery in your PC) and if that battery goes out or if for any reason that circuit shorts, the unit will not charge. The main batteries are probably OK, just discharged.

I would recommend that you send it to Icom, but be prepared to spend $75-100.

Could be that some moving part in the engine is creating interference with your scanner. I had this happen to me when I tried to use my scanner in my boat. The buzz seemed to correspond to engine RPM. Hope the problem gets solved ;-)

Looking into the scanner world and have found the computer based models (icom's pcr1000, Winradio 1550e or Optoelectronics Opticom) appealing as I am Computer Tech by trade. Can anyone point me in the right direction? Will the computer based models do the same or more then a base model?

I have heard that ICOM support for the pcr1000 is lacking and the winradio has better software?

Or should I just go with a base that has the computer option?

I am interested in being able to trunk.

Will everyone switch to digital within the next 5 years? Will there be digital scanners or just software to decode the signals?

I appreciate any and all help!

Thanks!
Confused Tim

Source record: 79053

Hi Tim!

My personal experience is that Icom makes a better computer controlled receiver, and WiNRADiO makes better software.

I've owned three Icom PCR-1000's, two Icom PCR-100's, one WiNRADiO 1500e.

I preferred the Icom PCR-1000, except that the software that is supplied with it, was actually written for a DOS/Win3.x operating system, and leaves a lot to be desired. It will run under Win3.x/Win95/Win98/Win98SE, and WinNT4 & Win2k with some tweaking, although many claim they have problems with NT. There is excellent third party shareware available for the PCR-1000. I have read about third party solutions for trunk tracking with the PCR-1000, but never tried any of them.

The Icom PCR-100 is an excellent choice, if you're not concerned with SSB (Single Sideband) on the H.F. frequencies. It is a "lite" version of the PCR-1000, although it's software if more up-to-date, and was written for Win95, and works fine with any version of Windows! It cost a lot less as well...street price around $200.00.

I was very impressed with the construction of the WiNRADiO, and the software. However, it's performance did not seem as good as the Icom PCR-1000. Keep in mind, I had a 1500e, not the new, and improved 1550e. I talked to Bob Grove regarding the 1550e, and he said there was a noticeable improvement! WiNRADiO now has software for trunk tracking. I haven't tried it, as it was not available when I owned mine.

Never had an Optocom...however, thinking about it keeps me up at night! I'm sure I'll have to try one before the year is over! Keep in mind, there is no H.F. coverage with the Optocom.

The biggest advantage of a stand-alone scanner, with a computer interface, is that you can operate it without the need for a computer. This is a consideration when on vacation, during power failures, or when you just need to get the hell out of your computer room!!!! Oh, sorry, I got carried away! :) The new Uniden due out toward the end of the year looks promising!

You don't have to wait five years to bump heads with digital radios! They are already in use in many areas. The entire State of Michigan is converting over to digital. Will there be scanners capable of monitoring digital...absolutely! Will they be available to us as hobbyist? That remains to be seen. I read about a year ago that Canada was going to have a digital scanner, that they were planning on leasing to the media under a special license. I think eventually they will become available, either over the counter, or under the counter, like everything else!

Join the club of anxiety, and confusion.....ah, I mean scanner monitoring!

Want to trade my good condition YB 400 for one of the following scanners.

Bearcat BCT-12
Bearcat BCT-7

Yacht boy is in good condition with only normal wear and a small scratch on the display. Electronically it is excellent. I have the original box, manual, carrying case, and travel antenna.

I am looking for one of the above scanners as I want both the Highway notification as well as 800 mhz coverage. Please no junk. I have all the accessories with the Grundig, and would like the scanner to have same.

Thanks for looking.

Gary

Hi All,
I have a great condition R-100 scanner box, it has the Styrofoam inserts and the plastic bag the radio was wrapped in. If you would like to have a box to complete your set, this is it. $10
Thanks--
Bruce

6596. Cordless Dipole Question

Newsgroup: rec.radio.scanner
Date: 2000-09-22 00:00:00 UTC
From: r8500@aol.com
Message-ID: <20000922172504.26864.00000578@ng-md1.aol.com>

Has anyone used the cordless dipole antenna available from CRB Research Books (and other dealers), and if so, does the dipole perform any better than a good ground plane? I'm presently using the Radio Shack 6 foot ground plane antenna (the one with 3 vertical and 3 horizontal elements, cat. #20-014) for scanning 43-47 MHz, and I'm wondering if the cordless dipole would provide any improvement in reception over my current setup. Any information would be greatly appreciated.

Thanks,

David

Basically, you want to listen to the transmit frequency of a repeater.
If you can tell where you live, Suzi, I may be able to give you some
frequencies. They are listed in the American Radio Relay League's
Repeater Directory.

Now, if Winradio would only build their consumer receivers so that they had as much dynamic range and resistance to oveload as my $199 radio shack scanner, they would have something to brag about.

I was pretty insulted when the anounced the 1550 shortly after I bought my 1500. The 1500 was awful on ANY antenna on most any frequency from DC to daylight here in Seattle.

I traded it away.

Beware!

It's been a while since I had my Z30, and I don't remember how to
program it, but I do know how to fix the memory problem.
On the circuit board (in the area of the power supply) you will find a
capacitor that is maybe a 1/4" tall and 1/2" in diameter. The rating
on the capacitor will be 2 or 3 farads. Replace this capactior
(Replacements can be purchased from Radio Shack, or at least they use
to be). Instead of using a backup battery in this scanner Regency
used a very large value capaticor to maintain the memory during power
failures.

Hope that helps...

THose old Transoceanics were quite good for their day. And as a collector item worthy of investment. But for daily listening, do investigate the latest offerings from Drake, Sangean, Grundig, Palstar etc. While every kind has it's foibles and good points the newest models make tuning in so much more easy!

Cross-posted to: alt.radio.scanner,rec.radio.scanner

We now have the 245XLT here in Australia, our version covers:

66.0-88.0
108-174
406-512
806-956

This was good news for us as the US version missed some 800Mhz freq which are cellar phone band in the US but are truncking channels here in Australia.

I have had a 245 for several months now and it works very well here in Sydney on the Goverment Radio Network (GRN) this network is a 400Mhz trunked system that is used by our Fire,Ambulance, Traffic Authority and dozens of other minor goverment departments.

For a great web site on scanning in Sydney and lots of info about the Olympic radio systems have a look at
http://members.dingoblue.net.au/~maggnum/

See ya

Is anyone using Winscan from Pozzila software with his BC245XLT ?

I downloaded the demo version to evaluate it but for now, I'm having problems to keep the banks alpha tag and when I downloaded my frequencies from my scanner, a lot of them are not in the right place. Mean that the # 61 is now shown in the # 68 etc. Each time I restart the software, the banks name's are gone keeping only the frequencies.

Also, when activating banks other than number one, it scan for a short time and go back to bank 1 and deactivate the others and what about trunking scanning.....

Is this because it's the demo version or that software is a crap ?

Any idea ?

Best regards

I found that to be a major problem with version 2. I have discontinued my evaluation of the program and removed it from my computer. I hope they come out with a bug fix and reissue the shareware version so we can make sure it works properly.

Not without a permit or as "part of a licensed mobile amateur radio
station," whatever the local police and judges think that means. There is a
judge in Suffolk County (Long Island) who believes that hams have a blanket
exemption in NY, but that is not the universal view.

I haven't studied the schematic but normally one puts a resistor in series with the LED to limit the current through it. There's an output to most every FM discriminator IC made that changes state, typically 0 to 5V, when the channel is busy. I would not suggest you drive the LED directly from this point, but it would be most safe to tie a 47k resistor from this point to the base of a small signal NPN transistor (like a 2N4401) route the emitter to ground, the collector to the cathode of the LED (marked with the flat spot) and the anode to a 1k in turn attached to the +12V input. Totally safe and won't impact the operation of any other circuits. Some of Cheeks modifications are suspect and will likely impact the operation of some circuits within the radio.

Has anyone tried Radio Shack's new scanner antenna? I'm talking about catalog #22-034, Deluxe Antenna for Handheld Scanners. It's shown on page 102 of the new catalog. It's a 9" rubber ducky, @ $14.99.

I picked one up the other day, and I've been using it on my PRO-92[A], and it seems to have an edge over the stock antenna. I don't have any equipment to do any serious testing, but I think it's a keeper!

Joseph:

The IC-R1 has a small internal battery inside the radio itself...you might check that. Regarding the main battery pack...Icom used to sell a battery case, that would allow you to use "AA" batteries...maybe with any luck you can still find one.

No, that dog won't hunt.

if you are posting from the @home system, then why have several of your
more recent posts originated from an AOL IP?

It costs about.00/month for @home service 9at least here it does) and AOL
charges about $26.00/month... personally, I find it rather puzzling that
you would
expend so much effort to mask your location (as well as gobs of money you
obviously have more of than good sense).

Hell, I already posted headers from you when you first reappeared SHOWING
the actual IP info of your posting host (and a traceroute/whois revealed
the
domain to which that belonged).

You might as well quit while you are ahead, John.
You've lost and you know it.
Continued harassssment on this point will result in many emails
to whatever provider you are currently using.

I've never owned one...probably one of the few I haven't played with. I read a review that claimed it's sensitivity was impaired in the 800MHz band, due to Yaesu's attempts to meet the government's demand for blocking cellular. They also blocked a little more than the cellular range, in the process. I know someone who owns an un-blocked unit, he purchased from Bandercom, and he's very satisfied with it, other than the fact it lacks trunking.

It seems there has been several of them up for sale, that claim to be only a couple weeks old too. Are users that unsatisfied, that quickly, or just trying to make them sound a little newer than they actually are?

It does have some attractive features, that can't be denied!

:>
:>The UK is having the same types of laws against scanners (it is
:>unlawful to listen to anything that you are not licensed to transmit
:>except for amateur radio and broadcast), guns, and restrictions
:>on Internet communications (one must post one's true ID, MI5 must
:>have a copy of any encryption keys, and MI5 can read your email).
:>And the Bobbies do pull you over to check for illegal radios, guns
:>and whether you have ag diesel fuel in your tank.
:
:Where do you Yanks get your info from? I blame Hollywood!

That came from an article in "Shortwave Magazine", published
in the UK (http://www.pwpublishing.ltd.uk/swm). It is sold at Borders
news stands here in the US. Very good Signal Intell. Many US
MI types read it. If you press the issue, I can give you the month
and author of the article.

:In "theory" one is not supposed to listen to police or cellular
:broadcasts but everyone does or did. Analogue cellular is now a thing of
:the past, all or nearly all mobile traffic is digital and the police are
:gradually encrypting their transmissions. The police here cannot pull
:you over on a whim, they must have a valid reason ie. a busted tail
:light or erratic driving. 99.999 per cent of the population do not own a
:scanner or a gun or use agricultural diesel fuel. It would be a total
:waste of police time to do so. The only thing the police will check (
:other than vehicle ownership and a valid car tax disc) is whether the
:driver of the vehicle has been drinking alcohol or not.
:
:In the unlikely event of a scanner being found it can only be
:confiscated if the owner has it tuned to a police frequency. If the
:owner has no criminal record it is usually returned with a warning after
:a suitable amount of grovelling at the local police station.

6650. Scanner for sale

Newsgroup: rec.radio.scanner
Date: 2000-09-23 00:00:00 UTC
From: Amy Walters <amy@4clay4playground4.com>
Message-ID: <yX5z5.90$RE.4338@eagle.america.net>
Source record: 79005

I have a Radio Shack Pro-60 scanner with a GRE Super Converter II (and some other extras) up for auction on Ebay. The GRE Super Converter II enables you to listen to cell phone calls by converting 810-950MHz into 410-550MHz. It's in great condition and works
perfectly. Here's the link:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=441625798

The starting price is only $50, with no reserve set. Please check it out if you're interested.
Thanks,
Amy

I am looking for any Indianapolis Motor Speedway track frequencies for the US Grand Prix tomorrow. I have no clue what they would be using, IMS radios, or the USAC dork's radios since they are the corner workers.

I've seen a list for teams at link below, but I understand thay change constantly. http://www.frequencyuk.co.uk/motor.html

Any help would be greatly appreciated.

Eric - My post to you asks you "what type of antennas do you use", and your reply is all this off-topic CRAP. ONCE AGAIN, I ask you "what type of antennas do you use"?

BTW - You are wrong about my service provider, the LAST SEVERAL messages I have posted here came from the @home system. When I am on the road traveling
I use what ever service provider I can access easily which could be AOL or any other.

Now, are you willing to talk about antennas or do you want to continue your off-topic activities?

What type of antennas do you use?

What is an "E2" fleet map anyway? In the 2067 manual it only listed fleet
map code beginning with "S".

>DeWayne

DeWayne,
I recently purchased a Yupiteru MVT-7100, and I think it is an excellent receiver. Selectivity and (especially) sensitivity with the Yupi is better than any
other handheld scanner I own, including my Icom IC-R10 and Radio Shack PRO-26. HF performance with the 7100 is as good as it can be for a handheld; better, in fact, than the HF performance of my R10. VHF/UHF performance of the 7100 is as good or better (in most cases better) than any of my Radio Shack or Uniden handhelds (PRO-26, BC235XLT, etc.). Yupiteru's Japanese to English translation of the MVT-7100 owner's manual is confusing at times, so try to get a copy of Javiation's supplemental instruction manual if you do purchase a 7100. The Javiation manual will enhance the user friendliness of the Yupi, which I think is very good to begin with. The only area where the performance of the 7100 falls short is reception of the AM broadcast band, but other than that it's a fine wideband receiver, especially for HF monitoring and SSB reception.

73,
David

Had one di not like it. Easy to program most functions were intuitive. Ok
on 2 meters and police freq. (150-160mhz). Not sensitive enough for good
reception any where else. The AOR is a super rig however it is a bit pricy.
You pay your money and you take your chances. Good luck. Ed KC4FD

Ok, gang I've uploaded some more documents from the FCC site for the forthcoming (when??) BC780XLT base/mobile trunktracker...the successor, sort of, to the good ol' 760XLT but with trunking. Added some block diagrams and schematics, internal close-up photos, etc.

It's at http://www.snowcrest.net/marnells/bc780xlt.htm

Now if they'd just add digital-capability to it...

Bear in mind that this was what Uniden submitted to the FCC last March, so things may have been tweaked here and there. I see nothing there about the control head being detachable...one pic is ID'd as the "front panel detached," but that's just for photo purposes as far as I can tell.

The associate punched in something on his terminal - then told me the
antenna no longer exists.
I've seen radio Shack associates that didn't know their own product
lines and inventory; and I've also known radio Shack to withdraw products
with no notice and no explanation.
I wonder what's going on here --- I plan to try a different radio Shack
store tomorrow.

Source record: 79030

I'm putting my RS mobile scanner in my new pickup truck and I selected the RS "cell phone look alike" antenna.

Here's the question: The distance between the antenna and where I'm putting the scanner is about 3 feet. The antenna came with 15 or 20 feet of coax. Can I cut off most of the excess and replace the BNC connector without fouling up the reception?

Will having an extra 15 feet of coax wrapped up cause signal loss?

Thanks for the straightforward answers.

--

To find the correct answer, find a table for your coax showing loss per hundred feet of your specific cable.(probably RG58)

My bet is that after you adjust for the length of only 15 feet, it won't be worth the effort to shorten the cable.

Press and hold the 2, 4, 9 keys then turn on the BC245. I have a v1.17
and haven't experienced any problems. There may be a 5 second delay but
it doesn't bother my reception of TG's.

From my short experience with a BC245xlt you may be trying to trunk the wrong type of system. I know the web site may say something different but it may be not updated.

When you come out of trunking mode and the scanner is on the correct control channel that is a good thing. You may be missing freqs or have the wrong freq's. I ended up comparing two different freq lists and had to add 2 freqs so I didn't miss calls. Even MT has an article this month about the systems up here in Orange County but they are the OLD ones. But scanning in the right mode and locking on to the correct control channel are important IMHO (and experience).

Sometimes I will turn on my BC245xlt and can see from the display that it is listening to the wrong control channel and the scanner is silent. So I press Trunk, get back to the correct control channel, then press Trunk. I know I may have some "extra" freqs in the bank, but I hear all the calls on the TG's I monitor.

On the BC245xlt you can press the DATA key to see different activity on the display. Try that instead of the Trunk key. It may help.

Don't program anything into the first channel of the bank.

Don't lockout the control channel as the manual might indicate.

I have a 92 / 2067 and both have worked fine on EDACS/Mot.

Only time I have trouble is when I cannot hear the control channel -
then the scanner doesn't trunk.

Needless to say, there are always a bunch of scanners for auction on
eBay. I ujst bought a Sony ICF-SC1 for $120 there.

Hi, I have owned the Yupiteru 7100 for 3 years now and it is the best as far as Im concerned.From airband to HF it is an excellent radio.I found that the SSB side of short wave is very interesting and since getting my computer I have started decoding aswell.
Go for the YUPI!

If RS is such a terrible company, why is it
growing by leaps and bounds? Why is it the
largest vendor of retail electronics? (yeah,
yeah...I know...they do so well because they

cheat their sales people...right? Heard that story before.) Why do they have 3,000 stores nationwide? Why do they have a reasonably successful European branch?

Anyway, I'm a stockholder, and have been since I worked there as a salesman for 4 years from 1978 to 1982. During that time I participated in the stock purchase program. Those stocks are worth many thousands of dollars now. I got them by being screwed by a "chicken shit" outfit!?!? Had I stayed with the company, and continued my frugal lifestyle while continuing to buy stocks, and I could have been retired by the time I was 45 years old. Now I work for a police department, and will have to work until I m 62 years old. Which makes more sense?

I get such a kick out of people who know so much more than the people who run the most successful business of its type on the planet. It is like hearing someone say, "If Bill Gates would only listen to me, he could make some REAL money!"

Ref RS products...last time I checked out the Annual Report for the company, the numbers were something like this: 30% of what RS sells, they make, but 60% of what they make is sold by other companies. That was a few years ago, and things could have changed, though. Ever hear of Memorex? It's a RS company. RS makes their own TV antennas in their own company in Iowa. (It was Antenna Craft or Gavin, or something like that.) RS has a company called Lika, which makes high quality multi-side circuit boards, and the US Govt. has/had a contract with them to make boards that go in F-16s and on the Space Shuttle.

RS has several overseas companies that manufacture equipment, particularly stereo equipment. Granted, some of RS stuff is Pioneer with their own label on it, but the converse is also true. When I worked there, RS s overseas company made several of Pioneer's top of the line models.

They make/made their own low end volt-meters, much of their own wire and cable, used to make lots of phones don t know if they still do, they make MOST of their own speakers...(I was in one of the factories and saw them doing

it...impressive operation, BTW.) FWIW, RS sells more stereo speakers than anyone. Sure, you can buy a Bose system that will out perform the RS speakers, but RS aims at the middle of the road buyer, not the high dollar audiophile purist, since there are a helluva lot more of us middle of the roaders than purists. RS doesn't claim to have the absolute best speakers and such. (McDonalds doesn't claim to sell the world's best hamburger, but they are number one in the business.) Just like McDonalds, RS has done lots of marketing surveys and product research in order to reach this point in the consumer industry. They know what they are doing. They also are acutely aware that you can't please everyone, so there will always be those that don't like them. RS has millions and millions of customers that keep coming back, and their business keeps growing. They must be doing something right. But if they would only listen to me, I could show them how to make some REAL money. ;-)

Three different sources, including a "local" who's listening to the system
on Bearcat scanners, confirmed that it's a Mot type II.

>When you come out of trunking mode and the scanner is on the correct
>control channel that is a good thing. You may be missing freqs or have
>the wrong freq's.

He also confirmed that I had the right frequencies.

>But scanning in the right mode and locking on to the correct control
>channel are important IMHO (and experience).

Well, it was in the right mode, and it did seem to find the control
channel, and when monitoring the control channel it showed a flurry of
talk group IDs. It also showed the IDs when manually monitoring the other
channels. (But when doing that, holding down the Trunk button for two
secs or whatever did not put the scanner into "follow this ID" mode, it
simply produced the error beep.) ie it was decoding the control
information properly. It just wasn't responding to said info when it was
trying to trunk-scan.

>Sometimes I will turn on my BC245xlt and can see from the display that
>it is listening to the wrong control channel and the scanner is silent.

Not an issue here; only only set of freqs with one control channel were in
the scanner.

>So I press Trunk, get back to the correct control channel, then press
>Trunk. I know I may have some "extra" freqs in the bank, but I hear all
>the calls on the TG's I monitor.
>
>On the BC245xlt you can press the DATA key to see different activity on
>the display. Try that instead of the Trunk key. It may help.

No equivalent. There is a hidden "data" display that makes the display
really busy when it's trying to scan, but that didn't tell me anything.

The scanner went back last week, for a refund. I'm quite happy to believe
that this was a sample defect and not a design problem (esp. since, when I
looked at the box closely, it was clear the unit had at least been opened
before; also, when I got the scanner, a few local freqs were already
programmed into it; I'll bet someone else had it, couldn't make it work,

and returned it). ie I'm sure that a working 2067 could be found.
However the uselessness of the "ID lockout" misfeature is a showstopper --
because of that the scanner would have gone back even if I'd gotten it to
"trunk". Idiots. I'm joining the folks waiting for the BC780.

Body handling: HTML body converted to readable text

The key wording in the NYS law is "a vehicle equipped with a radio CAPABLE of receiving police frequencies" which adds a lot of questions as the law was written many years ago, before programmable radios. Some case law exists as to what equipped means. One case in particular, the user had a handheld scanner, but it was attached to the vehicles power system through the cigarette lighter plug. Thus the vehicle was "equipped". Does that mean if the user did not have it plugged in and was working on battery it would be legal? This law is old and poorly written.
BTW, When the police radio band was located just above the AM broadcast band, car radio makers would only let the radio tune to 1600 kc in a market when home radios tuned to 1700kc just to be within the law. This shows how old the law is.

I am a cop. Two things I made sure I had prior to retiring is a pistol permit and a ham radio license!

I owned a 1500 also...and I agree with our findings. However, why would you be insulted when they improved on something you thought needed to be improved? It's like anything else "high tech" these days...it is, and will continue to be, in a constant state of development, and improvements. Isn't that what we call progress?

Just like the Radio Shack PRO-92, had some problems, so they released the PRO-92[A], now every one is mad at Radio Shack! Go figure?

I just bought an Optocom, and have ordered another. Great little
box. Includes data slicer, good software, and appears so far
to work great.

It will NOT go below 25 mhz, but my needs were for 30 and above.

> website that has this info.

F1 is notoriously difficult to monitor because the teams actively avoid
being overheard to whatever extent their budgets will allow. The two
tops teams (McLaren and Ferrari) use encrypted comms. All of the teams
move frequencies around from race to race. Some teams have been reported
at times to use one set of frequencies through practise and qualifying,
and then switch to another set the moment the race starts.

This is not to say it can't be done. I'd take a look at

http://www.frequencyuk.co.uk/motor.html

It's mostly European loggings, but it's apparently fairly accurate.

Good luck
-A

6703. WiNRADiO now up to 4GHz!!!!

Check it out!

Bil Crocker

WiNRADiO Extended Frequency Range Receivers

WiNRADiO is the first communications receiver manufacturer offering low-cost receivers operating to 4 GHz.

Intended for government, military, security, surveillance, research, satellite communications, media monitoring and industrial applications, these receivers complement the popular 3000 Series by extending the operating frequency as well as by offering additional IF bandwidths and improved AGC control.

The receivers are available in external as well as internal versions (the latter being especially suitable for multichannel applications).

The proven control panel of the 3000 Series has been further enhanced by adding additional features and improvements.

The software runs on Windows 95/98, NT and 2000. XRS is fully supported.

Both internal and external units have two antenna connectors: BNC for frequencies up to 1.5 GHz and SMA for frequencies above 1.5 GHz.

There are two basic types in this extended frequency range:
WR-3500 Series (frequency range up to 2.6 GHz)
WR-3700 Series (frequency range up to 4.0 GHz)

Each series includes both internal and external models.

See detailed specifications using the following links:

There are also many good base scanners that can be computer controlled as well as handheld scanners. Might be something you want to look into. Check out http://www.strongsignals.net/ for some great info.

>I'm putting my RS mobile scanner in my new pickup truck and I selected
>the RS "cell phone look alike" antenna.>

I wouldn't cut the coax. The signal loss won't be alot.

The disadvantage to cutting the coax is that you may decide to move either the scanner or the antenna in the future. Cutting the coax to 3 feet long won't leave you much leeway.

Jeff Multer, Fort Mill, S.C.

:>I see it going the other way. Getting rid of unlicensed CBers,
:>arresting the outlaws and making scanner and SWL listeners
:>get ham licenses.
:
:Scanners are NOT illegal anywhere in the USA EXCEPT
:for a handful of states that prohibit the use of scanners
:in an automobile.

It is not a handful of states. It is nearly 3/4 of all states have
limits to having scanners outside your home. You will find the laws
under the section of your state code dealing with the interferrence
with the duties of a police officer.

:>The cops are having big problems with drug runners using escort
:>vehicles with scanners and out of band CBs or VHF handhelds to
:>avoid the cops. The cops are afraid that the drug runners might get
:>ham licenses to avoid arrest for possession of illegal scanners.
:
:Two points:
:1. If the cops truly felt threatened then they'd be
:asking their state legislatures to enact anti-scanner
:laws everywhere. They are not doing that.
:2. There are NO illegal scanners. Anyone can own
:a scanner. The issue of use/possession of a scanner
:ONLY comes into play if the person using/possessing
:the scanner is in a motor vehicle in one of the few
:states that prohibit using a scanner in an auto.
:3. Only one state actually prohibits using a scanner
:anywhere else but in your home (Indiana?).

Read the cover article in Sept 2000 Popular Communications.
Michigan is making it very hard for race fans to have scanners
to listen to the drivers. The Mich. State Police are arresting racing
fans for have scanners in their possession without a ham license.

:>There is also the problem of foreign nationals using ham equipment
:>to communicate for purposes of spying.
:
:If that has any concern, it has been the case
:for 75 or more years.
:
:>If anything the cops want stricter laws, just as with guns. And code
:>isn't the answer as foreign nationals will be more likely to pass a
:>code test than US citizens. If anything the cops would like to see

:>ham radio, scanners, and CB radio banned. If the public can not
:>communicate then they can not rebel.
:
:True, but no laws of that nature are being proposed.

Actually there are laws in front of congress that would strictly
limit the civilian population's ability to listen to government
freguencies. As the police go to trunked digital radios, they
want it made illegal to make a scanner that can listen to trunked
radios or digital communications. What they are doing is making
the way that they digitize the voice information non public therefore
since it is not public, no one has the right to decode it (it would be
a violation of the laws dealing with encryption). Look at Strong
Signals web page (http://www.strongsignals.com). If you can not
find it, I will post the bill numbers (HR).

:>The UK is having the same types of laws against scanners (it is
:>unlawful to listen to anything that you are not licensed to transmit
:>except for amateur radio and broadcast), guns, and restrictions
:>on Internet communications (one must post one's true ID, MI5 must
:>have a copy of any encryption keys, and MI5 can read your email).
:>And the Bobbies do pull you over to check for illegal radios, guns
:>and whether you have ag diesel fuel in your tank.
:
:This, howver, is NOT he UK and there is no
:imminent or proposed radio restrictions of the type
:you suggest above.
:
:Cheers,
:Bill K2UNK

Bill you seem to be out of touch.

I have the Police Call on CD. That is where I looked up San Diego in CA. Is there a separate listing for San Diego City?

I'm guessing that there may be a need for you to enter a fleet map.

Since I am on the East Coast I am not familiar with frequencies in your area. I found http://www.fordyce.org/scanning/links1.html#CA which seems to list a number of links for California pages. I saw there was one page listing a bunch of trunk ids -- I'm sure there will be a page listing the fleet maps as well.

http://www.bearcat1.com/fleetca.htm lists a bunch of frequencies and fleet maps for California. They seem to list San Diego City as a Type II which does not require a fleet map. To listen on my system I've entered the frequencies (skipping the first "0" channel) and selected the MO mode.

You might also check http://www.pro-2067.com for lots of tips.

Hi Rich!

The Grove Scanner Beam, is very similar to a T.V. antenna, turned 90 degrees, so it's elements are vertical. It is very easy to install! Keep in mind, it is highly directional, so you should consider mounting it on an antenna rotor. Unless you're installing it to snag a dedicated signal(s) from primarily one direction.

I don't have it on CD. I have it on hardcopy. There are separate
systems, and therefore there SHOULD be separate listings, for San Diego
City and San Diego County. Both are Motorola type II which do not require
fleet maps. Several local hobbyists have confirmed this. If the Police
Call CD-ROM disagrees, it's incorrect.

>I'm guessing that there may be a need for you to enter a fleet map.

No.

That's what I've been trying to tell you. Several other web sites agree
(for both City and County). Believe me, I've been researching this.

>To listen on my system I've
>entered the frequencies (skipping the first "0" channel) and selected
>the MO mode.

"Skipping the first channel" seems to be a Bearcat-inspired bit of advice;
many have said their 2067s trunked fine without their not-using the first
channel in the bank. In any case I tried it both ways, with channel 0
programmed and not. (The "not" was after a full reset, so as far as the
radio was concerned nothing had ever been in that channel.) No help.

>You might also check http://www.pro-2067.com for lots of tips.

I did.

Look, the radio has long since been returned. 2067 fans: I believe it is
capable of scanning this system, I just think I got a bad one.

But given the problem with the ID lockout that it would have if it DID work, I don't want another.

plus you may not get as good a connection when you replug the end, and that will hurt you a lot more than a few feet of cable, when you run an antenna on your roof at your house you will have 50 or 100 feet of cable and it will work fine.

> with the duties of a police officer.

You over-reach in your thought that just because interference
laws exist that they preclude using a scanner outside one's home.
Nothing I have seen or read about has offered any actual case
where someone listening to a scanner has been charged with
interferring with police under such a law. If you have case
example(s). please provide the details.

Now if someone with a scanner in a state that allows
them in autos actually interferes with police because
of what that individual heard on the scanner, then I
have no problem with the police throwing the book at
that person.

Otherwise, I restate my comment, only a handful of states
actually prohibit scanner use anywhere...and none outlaw
use at home in any case. A 1991 book entitled: The Listeners
Lawbook" identified the following states as outlawying scanner
use in some manner: CA, FL, IN, KY, ME, MI, MN, NE, NJ, NY,
ND, OK, RI, SD, VT, and WV. Most all of these laws focused
ONLY on scanner use in autos. Since then the law in NJ has
been changed and allows scanners in autos.

Most, if not all, of those states also had exemptions for
licensed hams...but even without such an exemption, the
FCC pre-empted all such laws as they might have been used
against a ham with an extended recieve range transciever.

> Michigan is making it very hard for race fans to have scanners
> to listen to the drivers. The Mich. State Police are arresting racing
> fans for have scanners in their possession without a ham license.

Michigan is one of those states I noted above with a specific
statute against having scanners in autos. The specific law
is: Penal Code 750.508. The law has been on the books in
Michigan since before 1982... so it is not a new threat to
anyone. If, as you say, the cops are arresting race fans
that have scanners, then perhaps you need to make a concerted
effort amongst those in MI to allow scanners at races. The
current law (750.508) only involves having a scanner in an
automobile.

If I were a race fan in MI I'd make sure my scanner was
well packed away from plain sight so no police could see
it and even think I was using it while in my car...BUT,
then too, I'd be exempt anyway since hams are exempted
in the MI law.

>
> Actually there are laws in front of congress that would strictly
> limit the civilian population's ability to listen to government
> freguencies.

Limiting your "ability" to do so is not the
same as saying it is illegal to do so. Limiting
ability can be based on technology advances
and encryption alone.

> As the police go to trunked digital radios, they
> want it made illegal to make a scanner that can listen to trunked
> radios or digital communications.

That doesn't outlaw existing scanners. The government
may outlaw the manufacture of such devices, but
that is not what you were saying before.

> What they are doing is making
> the way that they digitize the voice information non public therefore
> since it is not public, no one has the right to decode it (it would be

If it is encrypted, you'd have a tough time decoding
it anyway without the key. Are you opposed to
government or anyone else encrypted digital
transmissions?

> Look at Strong
> Signals web page (http://www.strongsignals.com). If you can not
> find it, I will post the bill numbers (HR).

Post whatever you want.

> :
> :This, howver, is NOT he UK and there is no
> :imminent or proposed radio restrictions of the type
> :you suggest above.
>
> Bill you seem to be out of touch.

If you mean I don't buy your "sky-is-falling"
worries, then perhaps I am...in your eyes anyway.

However, just
what exactly do YOU want. You appear to be
unhappy that certain communications are now
being encrypted and you, therefore, are unable to listen
to those transmissions. Frankly, had cellphones started
out as encrypted digital channels the ECPA probably
wouldn't have ever been needed or passed.

Cheers,
Bill K2UNK

6739. for sale bearcat 500 channel scanner

Newsgroup: rec.radio.scanner

Source record: 78982

bearcat 9000xlt 500 channel base scanner
works and looks new,.....$250.00
shipped
thanks jack

6740. Re: Bearcat scanner info?

Newsgroup: rec.radio.scanner
Date: 2000-09-24 00:00:00 UTC
From: Harry Marnell <marnells@snowcrest.net>
Message-ID: <8qm2jv$6lm$1@news.snowcrest.net>
Source record: 78983

Ok...found this:
Type Handheld
Range 30-54 138-174 380-512
Channels 10
Banks 1
Modes FM
Priority No
Conversion Double
Scan 15 channels/second
Search N/A
Audio 480mW?
Power 7.2V DC
Size 2.6"(W) x 6.5"(H) x 1.4"(D)
Weight 20 oz
Interfaces BNC, DC, speaker
Accessories Antenna, metal belt clip
Features 3 second global delay,
takes 5 AAs

To program it, be sure the keypad is unlocked (the off/on) switch.

Press the MANUAL button to get to channel 1.

Enter the frequency you want using the keypad, e.g. 460.325 (be sure to press the decimal key in the right place), then press "E" for ENTER. Unless you goofed, 460.325 is now in channel 1. To be sure, now press the "Review" button, and the frequency should display, one number at a time.. 4 - 6 - 0 - . - 3 - 2 - 5.

Press MANUAL again to get to Channel 2, and use the same procedure. Likewise thru channel 10.

Press the scan button to scan thru the ten channels. If there is a channel you don't want to listen to right now, press manual until you "step" to it, and press "Lockout" It will be skipped over until you come back and unlock it (using same procedure).

If something is happening on a channel and you want to stay there (and not scan), just press the MANUAL button when it's on that channel, or step to it and it will park on that channel until you hit "SCAN" again.

You can change any frequency by going to its channel and simply entering a new frequency...it will replace the old one in that channel.

Let me know if you need anything else.

In near mint condition, with the original manual. Also, I will throw in the computer interface and unused 12V DC optional kit. Covers upto 2 GHZ, with unblocked 800 MHZ.

It also has the optional wireless remote control board installed. But, I've misplaced the remote control due to a recent move. It will be sent to you for free when it turns up.

Asking $750 shipped.

Anyone with enough money, knowledge, incentive and time can break into
virtually any radio signal, especially one from a $75 Sony
'digitally-secure' cordless phone. Make sure you don't gamble your most
sensitive conversations on the security of a cordless phone (or a corded one
for that matter).

I agree. I always enjoy going into Radio Shack to browse, and I really don't expect the sales help to know more than I do about the specific things I am interested in. If they are knowledgeable, great, but if they aren't, then I am glad I did my own research on the product first. That's the reality of "consumer" electronics. There are those who rely on the salespeople to tell them what's what, and then there are those who search the internet for less sales-oriented commentary on various products. Over the years I've bought several scanners, from Radio Shack and through mail order, but each time the research on what to buy was separate and apart from the sales presentation. Anyway, I appreciate the niche Radio Shack has carved out for itself.There will always be an outlet that does a better job of marketing specific items, whether speakers, scanners or whatever, but generally, overall, RS does a remarkable job for the average consumer. Negative comments: (1) the RS stores have way too many confusing cordess phone models to choose from, and this "cue cat" thing is going to be a real interesting experiment. I took it off my computer about 10 minutes after I put in on. One more thing- Radio Shack really dropped the ball on the marketing of computers. I still miss the Deskmate graphic user interface. It was amazingly simple and efficient. Much handier than, say, Windows.

6757. Re: mobile scanners in vehicles in ny state(YES)

I am a licensed ham radio operator and I paid
a $80 fine in NYS for having a scanner in my
vehicle. I wrote a note to the judge explaining
my license and most other states allowed a
mobile scanner with a ham license and it didn't
appear to make a difference. Judge told me
I couldn't get a permit(I live out of state)but I
could have it in the vehicle AS LONG as it
was stored out of reach and disabled. This all
took place on I-81 at the NY/PA border and I
can still remember the trooper handing me
the ticket(I told him my ham status also)and
saying"police do not like the motoring public
listening to what we're doing. I still use the rig
in my vehicle countrywide but it's easy to grab
and hide when needed. Hope this helps....

Source record: 79043

A few years back there was a very similar story about an "internet haunting" where supposedly someone was harrassing a family over the internet. All sorts of happenings in the home (including the microwave turning on) were attributed to a "hacker."
It turns out the whole thing was staged by a youngster in the house.

In this news report it states that there is a 13 year-old in the house. I'll bet in a few months you'll see a follow-up where the child is implicated.

20 years ago these incidents were attributed to poltergeists, 200 years ago witchcraft, 2000 years ago succubi...

Today's modern evil is the hacker, instead of a demonic or ghostly presence.

History has always shown it was "rambunctious" children causing the problem.

Gee,
now you are ignoring the proper "on-topic" posts by asking little side
questions
to divert it (again).

I use a standard scanner antenna for the scanner, and a CX-902 tribander
for the relevant amateur spectra. in fact, I did respond ON-TOPIC, but you
are now calling me a liar yet again. I just didn't specify antenna types
in my original postings. in fact, you are probably using my responses
to bolster the stats in your favor so far as on-topic postings are
concerned.

Both are located at 40 feet from the ground (tower mounted) and with
the tribander, I am able to work nearly any repeater within 100 miles
on just 5 watts. The scanner antenna is nothing more than a typical
radioshack braodband antenna (Often referred to as a "discone
antenna").

Now, answer me this:
where did you report for bootcamp training?
(sorry, but you have avoided this and I feel you are LYING about
your so-called military service).

The less cable the better, as long as you use GOOD quality BNC connectors
and they are installed properly you shouldn't have any problems. Try to
stay away from RG-58 it tends to be a very high loss cable.

I have owned both, and I would have to say performance wise, the 7100 is identical to the 9000. Looks wise, the 9000 has a better display with alot more details (alpha tagging, etc). The 9000 has a bandscope, where the 7100 does not. The 9000 has 15k and 30k steps (good for 150mhz business and 800mhz cellular scanning respectively) where the 7100 does not. The 9000 also has bank link scanning (can program a combination of any of the banks to scan) where the 7100 does not (can scan only up to 4 banks at a time). If you plan to do alot of searching, I would get the 9000. If you plan to do more programmed scanning, you can't go wrong with the 7100.

6776. Re: Yupi 7100 VS BC3000xlt

Newsgroup: rec.radio.scanner
Date: 2000-09-25 00:00:00 UTC
From: slvbeard@netzero.net
Message-ID: <8FBB1A268slvbeardnetzeronet@204.181.81.113>
Source record: 78915
Cross-posted to: alt.radio.scanner.uk,rec.radio.scanner,alt.radio.scanner

I started scanning several years ago with a hand held Bearcat 3000. I would have to say it was a very good scanner in it's time. It had nice looks (although many people called it a brick due to it's large size) and good coverage (better than most other hand helds at the time). My only major gripe was that it had a very expensive battery pack, it cost me $30 to have the battery pack rebuilt. All and all it was a very good scanner.

I have since, however, gotten onto the Yupiteru bandwagon. I would have to say in retrospect, in pure performance, the Yupiteru 7100 and 9000 are leaps and bounds better than the Bearcat 3000. My Bearcat 3000 was deaf compared to my Yupiteru's. Not to mention, the great little Yupiteru's use simple AA rechargable and standard alkaline batteries. Whats even better is that the Yupiteru's have even wider coverage than the Bearcat 3000's (shortwave, uhf television, etc.).

The Bearcat 3000's were good scanners in their day, and they are still my favorite choice for domestic made handheld scanners, but for a little more money, the Yupiteru's are much much better.

6777. Re: Yupi MVT-9000 VS MVT-7100

Newsgroup: rec.radio.scanner
Date: 2000-09-25 00:00:00 UTC
From: slvbeard@netzero.net
Message-ID: <8FBB16893slvbeardnetzeronet@204.181.81.113>
Source record: 78916
Cross-posted to: alt.radio.scanner.uk,rec.radio.scanner,rec.radio.shortwave,alt.radio.scanner

I have owned both, and I would have to say performance wise, the 7100 is identical to the 9000. Looks wise, the 9000 has a better display with alot more details (alpha tagging, etc). The 9000 has a bandscope, where the 7100 does not. The 9000 has 15k and 30k steps (good for 150mhz business and 800mhz cellular scanning respectively) where the 7100 does not. The 9000 also has bank link scanning (can program a combination of any of the banks to scan) where the 7100 does not (can scan only up to 4 banks at a time). If you plan to do alot of searching, I would get the 9000. If you plan to do more programmed scanning, you can't go wrong with the 7100.

Question:
Where can I find a current list of CHP frequencies?
I drive from San Luis Obispo to San Diego and would like to program in all
the useable frequencies.
Thank you
Michael

Yeah, I did not know this but that looks to be the case. Same channel, different PL tone and different repeater in this case. Just a little funny that they didn't revert back to the original Purple channel. Maybe equipment was switched out at the original recieve site rendering that channel completely dead.

Thanks for the reply.

>
> Unless I am missing something, the manual is is not specific on how to
> do this.

I'll agree that the manual is not perfectly clear about a lot of things.
:-)

There are two ways to assign a tone to a channel:

1) When a transmission is being received that uses the desired tone, press the "Trunk" button to store that tone.

2) In Program mode, use the Mode button to select PL or DPL, then the Step button to rotate through all of the possible settings. When you see the one you want, stop pressing the Step button. Press Manual or Scan and the value displayed will be stored as part of the frequency info.

You can verify whether a tone has been stored by stepping to the channel and pressing Program. The tone or code assigned will be displayed. CAUTION - when in Program mode, the scanner will not detect new tones or codes during transmissions.

A lot of terrestrial phone microwave is there too, but you need an external antenna close to the line-of-sight path between the two relay towers, & a SSB SW receiver hooked to the discriminator to decode it (not legally of course).

Hi Adam:

The new Radio Shack PRO-92 hand-held & PRO-2067 mobile are capable of following EDACS, as well as Motorola Type I & II, LTR (E.F. Johnson), and conventional, including PL & DL!

The PRO-2067 is on sale until the end of this month. The PRO-92 is rumored to be going on sale next month.

Another consideration is the Uniden Bearcat BC245-XLT!

At $15 bucks, I might consider buying one and testing it for any kind of resonance with my MFJ 259 B analyzer. Some of these ducks have actually had gain on the weather band, 440 MHz, 2 meter amateur bands, or elsewhere. If I get it, I'll post my findings.
As a side note,
I use the RS telescopic whip with the BNC connector, and have been very happy with it. Especially with my R2 for AM broadcast listening. I have been experimenting with small ferrite
antennas with the R2, but so far the whip wins, as long as you are holding it or have it sitting
on a ground plane. My sundial works great!

Those of us who are interested in preserving the future of scanning as a hobby are rather hopeful that "cell listening" will dry up immediately so the powers that be don't get more silly ideas about banning or restricting scanners still further. It will be easier to preserve the hobby as an acceptable activity for law-abiding citizens if people would stop finding ways to violate the law, and talking so much about it while doing it.

I have a Radio Shack Pro-60 scanner with a GRE Super Converter II (and some other extras) up for auction on Ebay. The GRE Super Converter II enables you to listen to cell phone calls by converting 810-950MHz into 410-550MHz. It's in great condition and works
perfectly. Here's the link:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=441625798

The starting price is only $50, with no reserve set. Please check it out if you're interested.
Thanks,

Well, I've had this not-available antenna for just over a month, and the local store told me it was the third one they'd sold, so somebody has it. BTW, I'm using it on my ADI AT-600HP 144/440mhz ham talkie which has extended RX, and it definitely works better, TX and RX, than the stock antenna.

besides the first person who told me it no longer exists - I've had three
now, tell me that is is so new that it is not available yet. One store
expects a shipment in 5 days, he's not sure if this antenna will be in that
shipment because it will be primarilly Christmas toys - but
I will look for the antenna again, next week.

A Rockwell Collins 95 S-1 is not a scanner anyway, it is a HF reciever. It is quite old, as they went out of business quite a few years ago. (Over 20 years ago). People seem to think that this news group is some kind of "appraisal service". What you are talking about here is an ancient tube rig. These go from anywhere from 50 bucks up, depending on just what forum they appear in (Hams are basically the only ones that would be interested), and are usually bought on their "nostalga" value, rather than their "real" value. I am not saying they didn`t make a fine radio. I still have the 75 S-1 around in working order, although I rarely use it. But it has little or nothing to do with "modern" radio, nor does it have much to do with scanning. Good day.

That thought had occured to me. I live in central Oklahoma, and the RS stores here are in the Fort Worth district (so I'm told), and RS headquarters and main warehouses are in Fort Worth. So it may be that they get items ahead of the stores in other parts of the country. I'll have to remember to ask the local store manager about that the next time I see him.

I think you're thinking of the 51-S1. The 95S-1A is a totally
computer-controlled wideband communications receiver. They cost around
$5000 brand new, but without any software to control it or manual, I think
it would make a nice paperwieght. There may be some places out there on the
'net to get information, but I wouldn't hold my breath. The 95S is not a
common receiver, so I don't think too many people would know where to get
software or what kind of baud/parity/stop bit info the receiver would use to
communicate with your computer.

On the other hand, if it did have software and a manual, I'd jump on it.

The PRO-91 only tracks trunks in the 800 MHz band (851 - 869 MHz). While
your scanner can listen to the 935 MHz frequencies, you'll have to upgrade
to actually trunk-track the individual conversations.

6822. 895XLT Trunk Scanning Q

Newsgroup: rec.radio.scanner
Date: 2000-09-26 00:00:00 UTC
From: n3vuz@my-deja.com
Message-ID: <8qr2querh1@nnrp1.deja.com>
Source record: 78867

New owner of an 895XLT. Nice rig. However, it seems that it's only limited to scanning one trunk bank at a time, unless I've missed something. In essence, I now have a scanner which boasts 300 channels for scanning which can only scan 50 trunk id's (or one bank designated as a trunking bank). Sure, I can switch to conventional mode and get all 300, but this kinda limits my trunk scanning abilities.

Am I missing something here?

Thx de Eric N3VUZ - REMOVEn3vuz@refnet.com

The clear alternative is the MVT9000, which IMO is much easier than AOR to
program... On the other hand it has no PC interface option at all.
Fools!

Zombie Wolf -

The 95S-1 is solid state HF receiver with a computer interface. It was manufactured in 1995. It's an interesting radio. Check out http://www.wa3key.com/95s1.html.

I wouldn't buy it without software and manual. You can't use it without a computer interface. I have no idea what a fair price would be with manual and software. Without them - what would you pay for a big doorstop?

Dave

Pomona PD establishes a sub-station on the fairgrounds
during the course of the Fair. In the past years they
have used their secondary channel "Orange" for coordinating
activities on the grounds. There is also a fire station
"near the clock tower" that is fully staffed (24/7) during
the entire run. I believe this station is Station 189.
AMR also has at least 1 unit on-site everyday as well and
is usually stationed at the first aid station within the
Grandstands. In addition Fairplex has an in-house security
dept. that is operational 24 hrs-a-day, 365 days-a year.
Sorry, but I don't know any of their frequencies. Enjoy
your time at the Fair.

Pomona PD 153.860 Orange (tactical, used extensively during Fair)
155.550 blue (primary dispatch)
153.935 brown
AMR ambulance 47.58
LACoFD 470.4125

464.675 - Channel 1 - Maintenance, Admin.
466.500 - Channel 4 - Media, Sound, TV (CCTV for horse races)
464.550 - Channel 5 - Off-site runners/PBX
462.725 - Channel 6 - Lincoln Security
467.900
467.1125
467.2875
468.3375
466.3875
466.7125
466.8625
463.7375
466.3375
467.1375
467.7625
467.7875
467.8125
467.8375
468.2625

When I was programming radios for the LACF (yes, I worked there for the sound company, and yes, I worked on the radios) we put the parking trams and crews, cleanup crews, and each different division on a splinter channel in the high end of 467 MHz. IIRC, the monorail is programmed with 467.1125 or 467.2875 (or both, the radios are 2 channel Radius M100's). The monorail breaks down about once a day, and about 2x/week it breaks down so bad that it needs to be evacuated.
Remember that all the FRS channels, Itinerant Business channels, "Dot" and "Star" channels will be active with all kinds of traffic.
If Event Medical Services is still providing first-aid, they're on the Med splinters, as well as the main and security channels.
There's a little phone patch activity on channel 5, since it's tied in to the fair's PBX.

After checking the specs at the URL above, I discovered that the 95S-1 has stereo headphone output on the FM broadcast band. This is something that every continuous coverage scanner should have, but even Sony neglects to do it.

Count on Collins to do it right!

I picked one up at the Radio Shack in Kirkwood, MO (a suburb of St.
Louis) last week. Hard to tell if it is any better than the stock duck. It
certainly is larger and a bit more cumbersome to have on the 92A. I've got a
program that will will report dbm readings of my Optocom and will try and
compare the two ducks on the local NOAA weather channel as a steady reference
signal

Most newer AMR ambulances in the bay area have been outfitted with the lower profile fin antennas. The longer ones are VHF-Lo band along with VHF and UHF. The old whip lowband and loaded UHF were prone to damage and needed to be replaced often.

You can use the on a scanner if you want...but they are single band antennas.

Houston PD has used these antennas for years along with railroads and bus operators.

On that site, it says:
"... Now set to autoscan, with 360.2375 as lower limit, and
385.1625 as upper limit. Press SHIFT and change mode to NFM, then
change step rate to 5."

???

Huh?

Is 869.0400 heard on 360.2375, etc.? What happens to the rest of
the frequencies?

The article discusses soldering a wire between two pins of an IC
(chip), not diodes. If anyone has actually performed this mod,
I'd like to hear about it.

That thought had occured to me. I live in central Oklahoma, and the RS stores here are in the Fort Worth district (so I'm told), and RS headquarters and main warehouses are in Fort Worth. So it may be that they get items ahead of the stores in other parts of the country. I'll have to remember to ask the local store manager about that the next time I see him.

Re: SCANnorCAL, the email scanning group for Northern and Central California

As you probably know, the move to smartgroups.com has not been very successful, so I have moved the list back to egroups.

Just about everyone should have been added to the list. If you were already on the egroups version, your settings should have remained as they were.

If you wish to subscribe, unsubscribe or change your settings, please go to out homepage at: http://www.egroups.com/group/scannorcal the links for this are on the right side of the page, toward the top.

Please note the FILES, LINKS and CHAT features that are available to everyone from that same page.

Enjoy!

>manuals, the AR8200's manual is very straight forward and easy to
>understand. There is nothing complex or difficult about it. Due to the
>large number of features and capabilities this radio has there is a lot to
>learn, but not difficult to learn at all. The "basics" only takes a few
>hours to master! The rest is up to you.

I'll have to disagree on that. Being an experienced scanner user I
find that the AR-8200 is the worst scanner I have ever met when it
comes to operating it.
Just look at a simple task as toggling a bank in or out from scanning.
On the AR-8200 you must press:

F
SCAN
Arrow-down
Bank number key
ENT

To add to complexity both F and Arrow-down are located on the
left side of the scanner while the other keys are on the keypad.

The same operation on a typical Uniden or Realistic scanner is
just one keypress: Bank number key.

>Unlike *any* other scanner on the market, the AR8200 allows you to pretty
>much do almost anything with your scanner, it has no limitations at all!

It does not trunck track.
No per channel selectable delay.
Display does not indicate which banks are currently being scanned.
Deaf on HF.
Scanning speed slow compared to many Uniden or Realistic models.
CTCSS add on card does not work properly (This has been fixed on Mk II).

Having said that I'll admit that AR-8200 has a lot of nice features
that makes it a wonderful toy to play with. But if you need an
everyday workhorse and focus less on experimenting things like
scanning speed and ease of operation are more important and then
there are far better alternatives.

>This my friend only scratches the surface of what this monster scanner is
>capable of and why it's the best radio on the market.

There are no "best radio" in my opinion. Radios are like cars. It depends on your needs and you'll not get one single unit that does it all.

SSB antennas? I never heard of them. I've heard of SSB radio equipment, and I understand what it is, (wasn't aware that ambulances were starting to use SSB), but how would the antenna differ for SSB?

JonGage@pacbell.net
Most newer AMR ambulances in the bay area have been outfitted with the lower profile fin antennas. The longer ones are VHF-Lo band along with VHF and UHF. The old whip lowband and loaded UHF were prone to damage and needed to be replaced often.
You can use the on a scanner if you want...but they are single band antennas.

Houston PD has used these antennas for years along with railroads and bus operators.

First of all, it's Parris Island.
Second of all, Parris Island is the Marine Corps training facility, not the Navy.
Third of all, Great Lakes is the Navy training facility
Fourth of all, even if he was in the Marines he also could have gone to San Diego.

Please give it up.

First, you are on the wrong track.
Second, he doesn't need your idiocy cluttering up his idiocy.
Third, there are other, much more accomplished, "fans" who can take care of tweaking him.

No, it's probably for GPS. The shark fin on an aircraft is for the mode C of the transponder. All ATC communication is done via VHF and uses a straight 20" or so antenna.

When ground units communicate with aircraft it's almost always via a public safety channel.

Well around here (boston area) these low silhouette antennas are very common place on emergency vehicles. I first saw them on all the transit busses years ago but now many police cars and ambulances have them here. I think the main reason everyone is going to them is vandalism. People don't even know they are antennas and they are less likely to be removed or broken. They come in all bands except low 900,800,UHF and VHF. I know Antenna Specialist makes them but I think several other manufactures probably do as well. They are usually used on systems with multiple receivers where 1/4 waves where used in the past. In my town the police cruisers all have them on both there MDT's (800) and car radios (470).

In my area the Trunking systems are so full that I really like using one scanner per system. I have one 895 on the State's system and one 895 doing all my conventional stuff. With the amount they are both active I can't really see using one scanner for both even when the new one comes out. Now the car is waiting for the new one.....

>Can anyone tell me where I can find a listing of the 10 codes?

While there is a list of "standard" 10 codes, most agencies have developed their own. You'd be best off checking with the other local scanner buffs to obtain a list of locally used ones... you could get confused easily if they use non-standard codes. For example, a friend of mine was telling me that 10-33 was Officer in Trouble in one town that he lived. Around here 10-33 means that the officer is clear from the call...

Anyway, here's what I could find:

10 Codes

10-1 Receiving poorly
10-2 Receiving well
10-3 Stop transmitting
10-4 OK, message received
10-5 Relay message
10-6 Busy, stand by
10-7 Out of service, leaving air
10-8 In service, subject to call
10-9 Repeat message
10-10 Transmission completed, standing by
10-11 Talking too rapidly
10-12 Visitors present
10-13 Advise Weather/Road conditions
10-16 Make pick up at
10-17 Urgent business
10-18 Anything for us?
10-19 Nothing for you, return to base
10-20 My location is
10-21 Call by telephone

What would be a very good (not top of the line) base scanner with
continuous coverage from 1 mhz to 2 ghz. Also need location to purchase.
Must also be computer programmable.
If the mod is simple, I would prefer to get one in the US and do the mod
myself.
Thanks
Randy

Message-ID: <4irA5.1072$Mw.6791@read1>
Source record: 78822

Well, I think we have done it. We raised far to much controversy with our site and out of retaining my credibility, I have shut down the streams Calgary EMS on our site. Sorry for any problems this may have caused. I need advice from someone in Canada, either an attorney or someone in the "know" of Canadian Scanner laws and can break it down into plain English for me. I am concerned about rebroadcasting their transmissions over the Internet and if it's legal.

Cheers,

MedicDispatch.com

> They have been spoiled by the pick up service of UPS.

They apparently forgot that the USPS carrier comes in every day to drop off mail, and they can have the carrier pick up as well. Express Mail shipments can be picked up on request by a simple phone call. And if they had stamps.com they could print their own postage for the shipment, via whatever means (Priority, Express, etc.) they chose.

Does anyone know what happened to the guys that wrote Listening Post software, which would control a scanner and automatically record hits, etc? I downloaded a copy a couple of years ago to use with my WinRadio and it was pretty cool, but now they're nowhere to be found.

They used to be at www.lpcomm.com but that site's nowhere to be found now.

Thanks for any help - remove the NO SPAM to reply personally.

Not only that, they may have a few "unofficial" codes in use. I worked at
an agency that used "Signal 80" to mean "clusterf--k."

Let`s be realistic here. Just about any scanner that is going to span 2 GHZ is not GOING to be "cheap". And no, it is neither "cheap" nor "easy" to modify an existing scanner that does not do it, to actually DO it. (You are basically talking a re-engineering of the scanner). You could build a converter to listen to those frequencies, but then, you are going to lose the use of the frequencies that you use for the converter. And, the converter is not "cheap" or "easy" to build either. What the converter does is, it converts the high frequencies down to a lower set of frequencies (it is essentially another mixer stage "tacked onto" the scanner circuits). For these freqs, a converter is not going to be cheap.

You are not going to internally modify any scanner made since 1994 to do this trick, as the government has seen to it that you simply cannot modify them. They are potted in epoxy, or frequency bands are locked out in the micropocessor, etc, etc, etc.

Some of the "import" scanners will do this, and they are not prohibitively expensive, but you will feel the "pinch" in your wallet area. I would look into one of the AOR scanners if I were you, maybe one from Canada or Europe. However, it is illegal to import these into the USA, although it has been done successfully even in the recent past. How about one of you AOR afficianados in the group helping put this guy in the know ?

Since it's preprogrammed with hundreds of common frequencies, it's a great
scanner for those new to scanning or those who travel frequently.

One small annoyance with the BCT-7 that's always bothered me: the "priority"
for highway patrol frequencies cannot be switched off. Nor can local police
frequencies be monitored independently of highway patrol frequencies. That
means you will always get short interruptions of the audio when trying to
monitor local police frequencies.

Hi Robert.

There are a few databases available specifically for scanners
but you'd still have to manually enter the frequencies into your
scanner. If you go half a step further, you can add an inexpensive
interface in your scanner that will allow you to program your scanner
via your computer. The software that is included with the interface
also imports data from multiple sources (Percon, FCC, PROBE, etc.)

Here's the main website for the PROgramit Interface:

http://www.qsl.net/ka2pyj/index.html

Through a joint effort, with the designer, John Montalbano, I sell, build,
and install his interfaces. For the DIY type, a full kit, including all the
neccessary electronic parts AND software, starts at only $35.00. Details
on the interfaces at this link:

http://home.cfl.rr.com/scan/PROgramit/PROgramit.html

The PRO-2006 is probably the most common scanner that has had this
interface installed. If I can answer any questions, please contact John
or myself directly.

Thanks,

Robert

Hi all, I think I have narrowed down the go-between airports that the
military aircraft use across my area.
Most of it I believe to be between Shaw air force base in S.C and Moody
air force base in Ga. Most of
what I see is F-16's, A-4's,F-15's,&C-130's. Also I have seen C-17's
doing touch and go landings at the
local airport close to where I live. (Augusta,Ga.) Lastly, I live very
close to fort gordon and I also see
quite a bit of Cobra gunships and apache helicopters flying around,
especially during training exercises. I
was wondering if anyone knew of any good frequencies on these aircraft
and/or airports. Any help is
appreciated.

I used to work at Radio Shack several years ago, and I can verify that 98% of the people that work there ONLY work there so they don't work in fast food. When I worked there they paid minimum wage and 1% comission.

It's a high turn-over job, people there really don't care after a while, especially when they sell more "parts" than high dollar items. I myself was burned over and over by people that bought scanners, hand held cb radios, only to return them after the vacation or road trip was over.

Enough sour apples.

BRING BACK THE PRO-2006!!!!

That's right, the 895 only does one bank at a time.

The BC895-XLT is a first generation TrunkTracker, and that is all they are capable of...one system at a time.

My Mother has an 895XLT and she also did not like the fact that you can't trunk and listen to conv as well. The scanner also will only trunk Type I, II, IIi, and in the 800mhz range. This is not a problem if the agencies your interrested are on one of those systems.

She did, however, purchase the computer control software "WinScan" from Pozilla http://mghusa.com/pozilla/ If you have a computer the interface cable is simple to make and has some advantages. It will let you scan trunk and conv at the same time and will also let you add AlphaTags to your frequencies for ID. It's worth a look and you can get the demo for free which only allows 15min scanning per session. I think she paid around $60 for it but is worth it I think.

Good Luck

Hello I was looking at an ambulance here locally in San Jose, CA and noticed that they are using this "Shark Fin" shaped antenna for all their radio stuff. I know they use 900mhz multicast repeater system, with "button push" status system. My question to the group are these: What kind of antenna is this? Cost? And can It be used for scanner?

No, that's what the radio does. Still IMHO an excellent radio for its generation. Newer radios will do more multi system and multi mode stuff simultaneously. I have an 895 and I wouldn't trade it for anything. It's an excellent radio.

Source record: 78895

Being a very happy and proud owner of a AR8200MKII I feel I am qualified to comment on this excellent radio!

First of all let me dismiss any misconceptions concerning it's "complex" program. The AR8200 is not difficult to learn at all. Unlike scores of other manuals, the AR8200's manual is very straight forward and easy to understand. There is nothing complex or difficult about it. Due to the large number of features and capabilities this radio has there is a lot to learn, but not difficult to learn at all. The "basics" only takes a few hours to master! The rest is up to you.

Unlike *any* other scanner on the market, the AR8200 allows you to pretty much do almost anything with your scanner, it has no limitations at all! It has 1000 channels that are divided into 20 banks with 50 channels each. You can divide the channels anyway you like. For example if one bank will only have 20 channels, you can move the remaining 30 channels to any other banks. Yes, you can configure your banks to any number or combination of channels.

In addition to the 20 scanning banks, you also have 20 search banks!! Verry useful for serious scanners. I programmed frequency ranges for most of the ham bands, air bands, and other bands which I do not choose to place in memory channels but still wish to scan. Search scans are very fast and effective, and of course you can always add any new freq to any channel or bank.

In addition to scanning and search modes it has 2 VFO's used for programming freq's, entering a direct freq, and more search modes, with 5 additional *QUICK* memory slots for search ranges in VFO mode!

There is complete full step adjustments, mode adjustments (NFM, SFM, WAM, AM, NAM, WFM, USB, LSB, CW), and various auto settings, ATT, NL, AFC,and a alpha numerical display that allows you to name banks and channels. Also a full use scope monitor, signal bar code meter, lighted display and heypad bright enough to use as fog lights!

There are a number of interesting plug in flash cards and a few filters available for this scanner which further improves and expands it's functionability! I have the free downloadable software from AOR website, this is ok, and works nice, but I also got the 3rd party software from http://butel.nl/ which is even better but a bit pricy.

This my friend only scratches the surface of what this monster scanner is capable of and why it's the best radio on the market.

I plan on also getting the new AR8600 base/mobil set when it's available. For more info check out my page which has a section on the AR8200 with more links, plus other radios too, http://www.rebel-radio.net

The AR8200MKII is the most expensive HH on the market. At around $500, I suggest you order it through Bandercom and get the full unblocked version, http://www.bander.com/uk/scanners.htm order by telephone and request next day by FedEx.
Also order the case for it. BTW, it's stock swival telescoping antenna does better then any antenna's I have!!

If you get this radio, all other scanners will suddenly look like toys!

Best of luck to you!
Jim K

Up to this point you are doing fine, Blake.

But then below your statements become complete rubbish

SNIP
> to lure people into what is for the most part, the most unwanted
> postions in the Reserve, sort of like cannon fodder.

Blake, if they were unwanted positions then the Navy wouldn't offer
the billets. Certainly the personnel who fill those positions are proud,
or are you saying that "Information Technologists" (known as
"Radioman" before Jan 2000) are "unwanted"?!?!?!?!

> NPSAC is sort of like a wannabee boot camp. According to people
> in the navy, or recent retirees, the enlisted NPSAC is somewhat like
SNIP

Again, more rubbish from you Blake. I am SURE that you could NOT be
able to give names of any "people in the navy, or recent retirees" whom you
had
spoken with that would have given you such information as above. You
certainly
have NO idea of what the NPSAC Recruit Training is like. By the way, Blake,
it
is called "Recruit Training" and has been called as such for over 25 years.
The slang
term of "boot camp" is only used by people who have no recent military
knowledge
of the Navy, so any knowledgable people you would have spoken to would have
NOT used the term "boot camp" in discussions.

Once again, Blake Bowers, you have been proven a liar!!

BTW - NPSAC training includes all the basics such as firefighting, basic
radio
knowledge, PT, history, Gas mask use, etc.

>

Exactly as I said. Those positions are unwanted positions by
most people going into the reserves, hence hard to fill, hence
subject to recruitment enhancements. What part did you
you fail to understand? The program started due to the
lack of recruits for some of the basic ratings, and the
reserves needed to fill those slots.

> > NPSAC is sort of like a wannabee boot camp. According to people

Actually, you are incorrect again John. NPSAC has only been around
for 1 -2 years, and therefore could not be called "recruit training"
for over 25 years.

> The slang
> term of "boot camp" is only used by people who have no recent military
> knowledge

John, please follow the thread, "boot camp" which for years has been
a slang term to denote basic training in the military, was my words.

> Once again, Blake Bowers, you have been proven a liar!!
>

No John, I have been proven to disagree with you. Nothing I
said was a lie, just as no part of this specific message I
am replying to from you had a lie in it. Do you normally
call everyone who disagrees with your interpetation a liar?

Now, if we were going to call names, we would call you
a troublemaker, for your malicous crossposting to newsgroups
that were not in this thread, and have no desire to be in
this thread, such as alt.firefighters. But, I have no
desire to start trouble, and wish you would decide not to
also. This is an attempt to have a reasoned, intelligent
conversation.

> BTW - NPSAC training includes all the basics such as firefighting, basic
> radio
> knowledge, PT, history, Gas mask use, etc.

Yep, it sure does. I don't disagree with this, it is an
abbreviated version of the basic recruit training program,
designed to help fill vacancies. In the words of the brass,
it is not working to their expectations, but they are
continuing to try for now. Everything I said is on the Web
John, check it out.

So you are saying John, that if the navy had postions that no one
wanted, they would not try to fill those postions?

That does not even begin to make sense. In each branch of the
military, there are postions that are always tough to fill, and
the subject of enhancements to the recruiting program.

They don't just stop trying to fill them!

I used to use an adaptor to connect the car antenna to a scanner.
It worked very well, a bit more scratchy on a weak signal than a
quarter wave magmount but a WHOLE lot better than telescopic or
rubber duck on the handie inside the car. I wouldn't want to split
it to the car stereo as well though.

A good "stealth" solution if you cannot stand FM broadcasting any more!
(and not so bad if the scanner does WFM at 88-108 as well)

Message-ID: <39d3bc5e_2@nntp2.nac.net>
Source record: 78737

Wait a month or so and go for a BC 780XLT. That's what I'm doing, anyway. Until then, I use a Rat Shack, PRO-2042, which is a very nice scanner. Since you're new to it, why not pick up a cheap hand-held now, because you'll wind up with one, sooner or later. I have a BC 220XLT, which is a nice handheld scanner, and you can probably get a good used one at a nice price.

Paul, KC2FNC
NJ

p.s. Another responder mentioned AOR and he's quite correct - you cannot go wrong with that as well.

6949. Norman Oklahoma going trunk radio?

Newsgroup: rec.radio.scanner
Date: 2000-09-28 00:00:00 UTC
From: Yohei <ah431@detroit.freenet.org>
Message-ID: <8r0in0$u1r$1@nnrp1.deja.com>
Source record: 78741
Cross-posted to: rec.radio.scanner,alt.radio.scanner

According to today's newspaper, it sounds like Norman Oklahoma is going to trunk radio in two or three weeks. Can someone verify this? The newspaper article did not specifically say "trunk radio" but it sounded like it, with phrases like "talk group", "10 frequencies", and all of the city using the same radio system.

Since I do not own a trunk scanner myself, the only option I have at this time is to scan the trunk radio range for a signal (they are testing it with sanitation, I believe). Can someone verify that Norman is going to trunk and what frequencies they are using?

Thanks,
Yohei

I have one pro 2004 in pristine condition, with original operating
manual. this unit has been professionally modified to
receive all cell coverage, including no gaps. 25.000-1300Mhz
has CB receiving as well. this unit has been modified to receive
400channels instead of the 300. and has been spead
up in speed for scanning. this is a very nice unit, has a rear
jack for taperecorder or speaker out. and a dimmer switch
and a 10db gain attenuator switch on the rear. I will ship it
to you for 225.00US with a international postal check in advance. I am in
Toronto Canada. please email if interested

Windows SE? I think you mean ME. There are lots of reason I don't use
Windows ME but I'm not going to get into a debate about which OS is better
because that's not the point, and the problem with butel's software has been
fixed.

I am new to the hobby and am curious to which scanner to buy. I am interested in getting all frequencies including cellular. From what I have read only some scanners will do cellular. I have around $2-400 to spend, but have considered looking at auctions for deals. I have looked at the bc245xlt and bc3000xlt any suggestions.

Thanks in advance

Eric,

The NPSAC class that John did take is a reaction to the fact that the Navy has such a problem attracting qualified people into the reserve, so they have come up with programs like that to try to lure people into what is for the most part, the most unwanted postions in the Reserve, sort of like cannon fodder.

NPSAC is sort of like a wannabee boot camp. According to people in the navy, or recent retirees, the enlisted NPSAC is somewhat like really being in the navy....

I am looking to purchase a new scanner. I've been looking at several models, and need some extra opinions. What I need are:

1) Trunk tracking
2) Military aircraft band (225-400MHz AM)
3) PC connectivity would be helpful but not essential.

A hand-held would be nice, but I'm also considering desktop/mobile versions. Any suggestions will be greatly appreciated.

> wanted, they would not try to fill those postions?

No Blake, pay attention to what I am writing. Obviouisly both the
Navy & the personel want those positions or the positions wouldn't be there.
In particular, my position (billet) of "Information Technologist" (known as
"Radioman"
prior to Jan 2000), the Navy is short of qualified individuals to fill so
they offer pay and rank incentives to new people as evidenced by the
"Advanced Pay Grade" program. (Inaddition, current members received
re-enlistment bonusses at enlistment time)

I am sure you have had that statement told to YOU several times, Eric. Such as the
time you tried to say here on usenet that you were NOT the same person as "Hawke" or "proudhawk" & were proven to be lying.

> As for the program, that requires a certain amount of time
> already in the service and
SNIP

Wrong, again Eric.
Go read the Navy web site http://www.cnrrc.com/career/APG1b.html It will CLEARLY state under the heading of "Qualifications" the following: "not have prior service, active or inactive".

> His given name: John E. Mackey, Jr.
> (same as his dad).

Wrong!! My father's name is NOT the same is mine. His name is John E. Mackey, Sr.

> His dad's middle name is Earl.

Wrong again! My father's middle name is NOT "Earl".
(How did you get that idea???)

> therefore, this John Mackey posting in here
> is NOT the John Mackey listed in that newspaper article in Sioux City, Iowa.

Wrong again, Eric. The listing for the John Mackey in the Sioux City Journal is
indeed for me!
(http://www.trib.com/scjournal/ARC/2000/MAY/May_3_00_Wed/almanac/service.html)
>John E. Mackey Jr. of Sioux City, son of retired Air Force Lt. Col. John E. and Louise >K. Mackey of Portland, Ore., has enlisted in the Naval Reserve as an information >technologist (formerly radioman) with the rank of third class petty officer. His father >conducted the swearing-in ceremony.
>Mackey will attend basic training at Great Lakes Naval Center in Illinois in September.

Eric, now you can't deny this. It simply isn't practical or believable to say that it
is some kind coincidence of two different people named "John E. Mackey, Jr." having roots in both Sioux City, Iowa & Portland, Oregon AND went to Navy Basic Training in September AND have a radio background AND look enough like me to pass for the
picture of me swearing in!!!!!!!!!!

Eric, your denial & suggestion of " John Mackey posting in here is NOT the John Mackey listed in that newspaper article in Sioux City, Iowa" only makes you look like
the complete idiot & fool that you truly are!!

> He has lied repeatedly about how he was removed from scannradio in fidonet,

Eric, please post EXACTLY what I said that was lie & your verifiable proof that it
was a lie within 24 hours or be found to be a liar yourself by default.

> he has lied about how he treated Bill Cheek (even to the point of

Eric, please post EXACTLY what I did that was lie & your verifiable proof that it
was a lie within 24 hours or be found to be a liar yourself by default.

> He has harassed others in here (and in real life by
> calling work places, filing false police reports and

I have NEVER harassed people as you state above. Post EXACTLY what I did that was harassment & your verifiable proof within 24 hours or be found to be a liar yourself by default.

> His history is well known and well documented.

Then you should have NO problem present the proof asked for. Otherwise, YOU are proven to be a LIAR YOUSELF!!!

Actually, YOU are the one who is incorrect again Blake. NPSAC has only been
around for over 20 years, but has only been at Great Lakes for about 1 year.
Previous to that
it was located in New Orleans. (I have met MANY people who are graduates
of the NPSAC -New Orleans program back to 1980)

> John, please follow the thread, "boot camp" which for years has been
> a slang term to denote basic training in the military, was my words.

Blake, Navy Basic Training staff are prohibited from using the term "boot
camp"
to describe Basic Training.

> Everything I said is on the Web
> John, check it out.

Blake, I don't need to get my information from the web as you have done. I
have
actually graduated from the Navy Basic Training and am a member of the US
Navy
so I am able to speak from personal knowledge & experience. I don't have to
rely on the information from others & the web as you have to on this (&
other) topics.

Just for the sake of discussion.
If you put a encrypted message on a web site, then the recipient
could see it without anyone being the wiser.
With anonymous websites being a dime a dozen (I've got 3 myself)
You can "Send" a message to who ever you like.....
All they have to do is go to the proper website and pick it up.....

If my memory serves correctly their were several CBs with tone keys for "CW" operation. Of course it defeated the whole purpose of ease of conveniance but I think it was legal....

Your showing your age.... Those things weren't availble except to the
military. CB's came out in the late 60's early 70's wayyyy before
PC's

Thats like putting a satellite dish on a buckboard wagon.....

they can file a formal complaint against here and have
her green-sheeted...or black-sheeted if for fraud.
she's committing fraud and if your ombuds' know it
is costing lives, well, tip the press off and let them
roll with it...espec if her fraud causes some one else
death or misses an operation due to no ambu's around close
enough as she is playing cards afterwards...due to them being
out of range of that "emergency" call.

see if there are laws against it.

that is ludicrous: it's no joke. it is serious enough to cause
someone to die.

If a North America-only list will do, then you want the FM Atlas.

7008. outside car antennae help.....

Newsgroup: rec.radio.scanner
Date: 2000-09-29 00:00:00 UTC
From: emoney250@aol.com
Message-ID: <20000929121819.06346.00000153@ng-fy1.aol.com>
Source record: 78770

If my exterior scanner antennae was almost surrounded by fiberglass (wind deflector on the roof of a tractor-trailer), could that interfere with low band freq. (mainly CHP 42 mhz range). I get other freq. from 100 + miles away. I am not happy with reception of CHP. Seems that when I get further away from dispatch zones, I don't even get dispatch very well. When I do , it is hit and miss and even then the whole transmission doesn't always come through without breaking up. Hearing mobiles (nearby) seems impossible (extendar or car to base freq). Would an amplifier (Radio Shack $40) help?

What are you using for an exterior antenna? Very few mobile antennas are made to receive in the 42 Mhz range, not counting the one on the CHP vehicle made for that frequency. Take a look at the size of it the next time the CHP pulls you over. :-) Fiberglass shouldn't be a problem I think its your antenna. The RS amp might help but more than likely will just amplify the noise too, even more so if your antenna isn't designed to cover 42 Mhz. OTOH, you can always try and return it if it fails. I still am leaning toward antenna though.

Glenn

They are portable and quite similar to Uniden's in many ways. There are
two models and one can be programmed via a serial cable to your PC. I'd
say Sony's best feature is the better RF performance.

Another trick is to combine hobbies. I'm an Amateur Radio Op <Ham>,
and use my VHF radio (2-meters) for monitering the railroad frequencies.
Ham band is 144-148 Mhz, RR in 159-161 Mhz, so close by.

A 5/8 wave Mag-Mount antenna will work MUCH better than a 'Rubber Duck' <Also
known as a resonate dummy load...>. Trimming the antenna for the higher-end
of the amateur band makes reception above the band better.

Getting a 5/8 mag-mount, and then trimming it even farther, up into the RR
band, will make the reception even better. <Resonance works in both Transmitt
(SWR) and receive> So, trimming about an inch off of a 'Ham Radio' antenna
will get you real close to the RR channels. (shorter antenna, higher
frequency)

The same can be done for a 'Base Station' antenna.

You need a license to TRANSMIT with a Amateur Radio. You DO NOT need one to
listen, or Buy the Equipment.

The license to Transmit in 2-meters is the easiest to get, a N0-Code
technician will cover eveything above 30 Mhz. Most of the radio shack stores
can point you to a radio-license exam site, and sell you the books to study for
the license, as well as sell you a radio or two...

for more info, look at www.arrl.org

Hi,
I recently inherited a Bearcat 210 XL and was having a great old time with it, but it seems to have died. I've never had a scanner before. Can anyone recommend a suitable replacement? I want to listen to fire, ambulance & police calls and would like to keep the price to $100 or less, which I guess means used or refurbished. Any advice appreciated!

BTW the old one would scan for a while then display "E00000" and get stuck. I would turn it off & on and this seemed to cure it, but the last time I tried this, the power came on but it never scanned again. It's too old to be worth fixing, right? I am clueless about electronics and would have to send it back to the factory or whatever to be fixed.

Thanks in advance,

Sara

The Sony ICF-SC1 has wide freauency range - 25 to 1300 MHz (no cell, of
course) AM/NBFM/WBFM. It's easy to use, has OK audio, and seems to be
fairly sensitive. Does search, etc. It does not do trunked systems,
though. Also - no stereo FM headphone output. (Why not, Sony?) They
can be bought on eBay for $140 to $160.

_HE_ dosen't have access to GPS, but many businesses and public agencies have GPS units tracking and logging where their vehicles are at all times. There may be a GPS unit on that ambulance and he may not even be aware of it. <G>

Actually, no I should not believe him
(once a liar always a liar).

As for the program, that requires a certain amount of time
already in the service and Mr. mackey (under his current
legal given name) has served NONE!

His given name: John E. Mackey, Jr.
(same as his dad).
His dad's middle name is Earl.
So, how can John E. be a Junior if he claims his middle name
is Emmet? It can't. therefore, this John Mackey posting in here
is NOT the John Mackey listed in that newspaper article in Sioux City,
Iowa.

Again, he lied.

He has lied repeatedly about how he was removed from scannradio in fidonet,
he has lied about how he treated Bill Cheek (even to the point of
disrespecting the dead), He has harassed others in here (and in real life by
calling
work places, filing false police reports and damaging equipment in failed repair
attempts.

WHY SHOULD HE BE PUT UP WITH?!?!?

His history is well known and well documented.

He can rant and rave all he wants, I have just re-added him to my current
killfile.

hmmm.
ok. I can by that. However, aren't there prior requirements that
have to be met (such as prior military service or ROTC?)? What about
educational requirements?

This among other reasons is why I find it most difficult to believe that
J.E.M
even has the qualifications.

I did run a question regarding this program by the local USN recruiter.
From what I was told, a minimum of 4 years college is required to
qualify for the program. He also mentioned that adfter going through
the said program (mentioned) that one would be in the USN-reserves.

I would very much like to see J.E.M.'s actual qualifications
(such as degree, college attented <transcripts, etc>, certificates
of completion, etc.) Thinking on this, J.E.M. has still yet to produce
any evidence that he has attended university anywhere in the US
for more than 2 consequetive semesters, AND, produce a copy of his
degree(s)/Certificates.

oh well.

You are a bone head. You got every possible iteration of facts wrong.
The spelling was a minor point. Confusing the Marine Corps with the Navy
is a very big deal.

> and now he CLAIMS to be in the military, SERVING OUR COUNTRY?!?!?

Yes he does. You are on the verge of joining his company by virtue of
having your facts wrong.

> I am not here to "tweak him" just to make him see the truth
> of his ways (and considering he is in full blown denial, that might
> take a while).

You are now in denial in this thread. Trust me. I am a disinterested
spectator. I've followed this thread. I've seen where you got off on the
wrong track. Give it up. You can only wind up being a bigger idiot than

he. I never thought that was possible.

> > You said this a week ago and have made more than 5 posts since.

No, the armed forces thread has been going on for over a month. You made the above statement just a week ago, long after the armed forces discussion had pretty much run its course. Look in Deja to see how recent your statement of 20 September fits in.

> No one likes a faker, and tolerates a bullshitter even less.

But bullshitter is what you are starting to sound like. Might be worth following your own advice.

This is my last word on the matter.

800 MHz cannot be added to this scanner. You could buy a downconverter, if you can still find one.

You can find some mods here ftp://ftp.cdrom.com/pub/hamradio/oak/mods/tandy/
...and there are several other references you can find on the web.

Larry the Shreve ,

The security at my AT&T building wears a Jacket with the company logo on the back. Since AT&T usually hires other companies to do their security, you may be able to find out the company's name and look them up in the FCC Database of Per Con data finder.

http://www.perconcorp.com/datafinder/index.html

Click on "FCC Databases" (Top of page)
The click "SPECTRUM - FCC Frequency Database"

Or go to: http://www.fcc.gov
Click on "Search" (Top of page)
Then click "Wireless Telecommunications Database Search" (Left bottom)
That should take you to:
http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts

I was one of the original posters saying that CW was legal on CW as the ARRL manual said it was legal on all bands. I have since found the specific laws dealing with that (I don't have the URL handy, but it's through the FCC website at http://www.fcc.gov) and they state that only voice is legal on CB.

Those don't work worth a flip...not compared to a "real" dedicated antenna.

Go to www.strongsignals.net. There is a lot of information on trunking
at the site, and it refers you to other sites with even more
information.

No, but there may be a separate front panel available that will connect to the scanner and operate it. That way, you can put the radio under the seat or somewhere else convenient, and still use the radio. Great for people with small cars.

I figured from the size of them that they must be for very high frequencies, i.e.
900 MHz !

Maybe so, but they're still in close proximity to other surfaces and have no groundplane. While antennas can be designed and work satisfactorily under these conditions, they are stil a compromise over a full-sized vertical antenna with a groundplane.

7064. Intercept + Divulge

Newsgroup: rec.radio.scanner

Source record: 78613

This following article from www.borderland.com obviuosly uses radio traffic that was probably obtained via a scanner.

Borderland Friday, September 29, 2000 More than 18 crews sent to fight fire in mountain mansion Patrick C. McDonnell and Louie Gilot El Paso Times
Linda Stelter / El Paso Times

Firefighters climbed a hillside near Murchison Drive as they battled a fire that consumed a mountainside mansion under construction in the 1600 block of Camino Alto late Thursday. The house was estimated to be between 8,000 and 9,000 square feet.

A blaze that witnesses said could be seen from at least as far away as Bowie High School destroyed a mansion under construction on the side of the Franklin Mountains just below Scenic Drive Park.
More than 18 crews of firefighters were sent to the "huge" fire that was reported at 8:37 p.m. "I don't know how many pumpers you've got on the way, but you are going to need more," a police officer told dispatchers as he rushed toward the fire.

The fire was in the 1600 block of Camino Alto. Police blocked off portions of streets in the area to keep neighbors and passers-by from driving over the fire hoses and to keep them from putting themselves in harm's way.

The way the house was perched on the rocky slope presented additional problems for the firefighters. Once the walls of the home were drenched with water, the firefighters were warned to be careful that the walls didn't collapse off the side of the mountain. Fire Department supervisors were also worried that the many large rocks being washed down by water from the firetrucks "could hit some of the civilians on their heads" down below.

No injuries were reported, and after about an hour of battling the blaze, firefighters had the fire knocked down. They expected to continue soaking and investigating the smoldering ruins through the night.

During WW2, systems were developed for heating with RF. (for curing glue, I believe) During the war, if it helped military production and didn't interfere with military communications, niceties like Part 15 could be ignored. But with the war over, radiating trash willy-nilly across the shortwave bands ceased to be acceptable. The manufacturers asked the FCC to assign 25-29MHz as a band where they could operate industrial RF heating equipment legally. When the FCC stopped laughing, they told them to shield their equipment. They couldn't shield it that well. They finally comprimised, stabilizing their gear & getting 26.96-27.23MHz assigned. It was known as an "ISM" (Industrial, Scientific, and Medical) band; they could radiate if they had to, as long as their radiation stayed within the band.

I presume those frequencies are familiar. They were originally assigned as a ham band, with the understanding that hams would tolerate any interference received from the ISM equipment. (presumably no ham could radiate enough power to interfere with the ISM gear!) The interference didn't turn out to be as severe as feared, and in 1958 the band was reassigned to CB, which uses it today.

The 900 and 2400MHz bands are also ISM assignments.

I saw a Demo BC-780xlt at Dayton and then saw the Uniden Promo and noticed
now that the Backlight had changed colors. It was now amber instead of
green.
Look at these two links:

http://www.uniden.com/docs/product/prdetail.cfm?product=BC780XLT

http://strongsignals.net/image/bc780_broch_sm.gif

Uniden cant' figure out which color it wants to use
Personally I prefer the amber or orange color.
Seems like for mobile use though green would blend in better
and not be so obvious in the vehicle compared to the instrument cluster
color.

Any thoughts or observations on this?
Eddie Bryant

Hi:

I am still looking for Dead or Alive Motorola GM300's so long as they
do not have been subjected to water damage or a major Logic Board
repair. PA's Mother boards can be compromised. This are going to be used
for traning purposes, so acc'y are not really needed.

So, if you have a old GM300 laying around collecting dust, and you want
to get the biggest bang for you bucks, Cash is wait for it. Or if you desire
I have lots of Motorola stuff to trade as well

Please let me know what'ca have.

Monty

Blake, the APG school was known a NPSAC, even in New Orleans.
Just like you have stated that Basic Training is known as "Boot Camp".
When it moved from New Orleans to Chicago the name was formally
changed. Substancially the same program, but in a different location.
(The OS-VET program was also moved to Great Lakes)

> Clear proof that NPSAC school has NOT been around for 20 years
> as you state.

Read the above, then you will see how you are wrong.

> > Blake, Navy Basic Training staff are prohibited from using the term
"boot
> > camp" to describe Basic Training.
>
> That does not mean that everyone in the navy is prohibited, nor uses
> the term to describe NPSAC or real basic training.

If you accept the above, then you should have no problem understanding that
APG school in New Orleans was often referred to as NPSAC.

> You are a member of the US navy RESERVE, and possibly should
> consider going back for additional training in the history
> of the program. Your personal knowledge is either lacking,

HEHEHEHEHEHEHAHAHAHAHAHAHA
Blake, YOU have picked up a few scraps of information from the web &
other places about the Navy, & now you are attempting to tell others
what is & isn't correct about the Navy!!!!!!!!!!!!!
This reminds me of the time you tried to tell someone the power ranges of
a Motorola radio & I corrected you (& the rest of the group) by telling what
power ranges the factory has produced. You responded by stating that
the power range I listed wasn't in the catalog. Again, another example of
how you read something & immediately believe it to be gospel truth
without having the practical experience to know what you are talking about!

The software works well enough, once you learn how to use it, but there is the problem of the interface design; the software will be more familiar to users who are used to equipment of which the software interface is an obvious copy.

I've been writing a shareware program in VB6 using the WinRadio Software developer's kit available on their website, and I've designed my interface to be more like the radio in your car, with pushbuttons, etc.

I have seen other software that will work with the WinRadio, but it's been commercial software costing at least $100, and maybe a good bit more than that.

Read and learn:

If a governmental radio communication is "readily accessible" to the general public," then where is the harm in intercepting it and divulging the contents of the communication? Chapter 119 recognizes this by not prohibiting the interception and divulgence of such "readily accessible" governmental "radio communications." Furthermore, whenever a "readily accessible" message is sent out over the airways, it is essentially "divulged" to the public. Presumably, anyone using a lawful device, in a lawful manner, can receive "readily accessible" radio communications. Section 2511(1)(e) is also noteworthy in that it prohibits the disclosure of certain communications which are otherwise legally intercepted. Significantly, 2511(1)(e) does not prohibit the disclosure of communications legally intercepted under the exceptions contained in 2511(2)(g). If Congress desired to prohibit the divulgence of radio communications legally intercepted pursuant to 2511(2)(g), it could have easily done so in 2511(1)(e).

If you have more then one scanner, a cool thing to do is monitor both PD and EMS. The other night I was monitoring EMS (for the first time) and they had a call about a guy getting stabbed in the chest and on my other scanner I was listening to the police talking about suspects etc...

Gluing the layers of plywood together, that sort of thing. There
are HF bands set aside for it: ISM - Industrial, Scientific and
Medical.

You had trouble over there with these wide-screen TVs which
radiate broadband hash all over (here in Europe) 17/18 MHz?

I haven't actually seen one yet, but my thoughts on it are they should
do a amber/green option. I have a 2 meter rig that can switch between
amber and green, and I would imagine it wouldn't be too difficult.
And, since the colors of dash clusters vary so much, if you ever get a
new car, it's invaluable if you're trying to keep the colors matching.
Although my dash clusters in the past have been green, I like the
ability to switch to the amber at times, for "easier" visuality.
That's just my opinion on the amber. Otherwise, I think it should be
able to alternate. My vote would go for green though if they opt to
not let it alternate.

The 1.2Ghz HAM band, Aero transponders are at 1030 and 1090 Mhz. GPS is around 1.5Ghz. the output of a satellite RX is 950-1450Mhz...scanners are often used to listen to music,voice and data streams on the output of a LNB there.

I tend to agree that green would be better. I think there are many more car instrument clusters that have a green hue instead of an amber one.

If you REALLY want to know where the CHP is, it's pretty simple. First off, listen on 154.905Mhz for the trunk mounted repeaters. Second...keying up on 154.905 and clicking twice with the "local" PL tone will activate the repeater and answer you back with a "setup" tone of around 800Hz. you now know your within a half mile of a active CHP unit.The officer will more than likely hit the "disable" button on the console, but the cat is outta the bag at that time.

They were/are covered under CFR Part 15. Low-power Part 15 bands exist throughout the spectrum. Part 15 is what permits you to transmit QRPp CW on the AM broadcast band, use wireless mics on the FM broadcast band, et cetera. Even your garage door opener operates under Part 15 rules. One of my build-it-yourself books contains a Part 15 transmitter for unlicensed (but legal) CW operation on 80m! 73, Jeff KH6O

Actually, according to COMNAVRESFOR Instruction 3500.13,
"The APG School in New Orleans will be replaced by a 14
day non-prior service accession course <NPSAC> at recruit
training command <RTC> Great Lakes."

Also, reference message sent routine traffic, 051205Z Jan 00,
From COMNAVRESFOR NEW ORLEANS LA
TO NAVRESFOR

MSGID/GENADMN/COMNAVRESFOR

This message states that previous to last year, non prior service
personnel recieved their "basic training" at the naval reserve
professional development center "APG school". It also states
that the NPSAC school is a NEW class, that replaces APG school.

It even goes on to talk about the DIFFERENCE between APG school,
and the new school NPSAC that replaces it.

Clear proof that NPSAC school has NOT been around for 20 years
as you state.

So, John, there it is. Verifiable proof that you are either WRONG,
which is a nice way to put it, or, if you insist that you
could not be wrong, then you are lying.

> > John, please follow the thread, "boot camp" which for years has been
> > a slang term to denote basic training in the military, was my words.

>

That does not mean that everyone in the navy is prohibited, nor uses
the term to describe NPSAC or real basic training.

Case in point...

Navy Times, July 31, 2000

"Non-Veteran Reservists go to MINI-BOOT CAMP"

Same article..

"The toughen-up training program STARTED THIS YEAR at Recruit
Training Command, Great Lakes IL where active duty enlistees go
for the FULL 9 week BOOT camp.

> > Everything I said is on the Web

You are a member of the US navy RESERVE, and possibly should
consider going back for additional training in the history
of the program. Your personal knowledge is either lacking,
or you are lying.

No need for personal insults.
As a occasional M?C rider from Los Angeles to Sacramento, I have come across all the careless inattentive drivers you describe. But when one is operating a tractor-trailer at 80mph and using a scanner to listen for the CHP for their vehicular repeaters is irresponsible. I would guess that 95% of truckers are responsible and careful drivers. But it is the 5% who give legitimate operators a bad name. There is a reason large vehicle operators need a special license, just like a pilot, a small error can cause great loss. You cant compare a yuppie range rover driver on the phone and a tractor trailer operator, the tractor-trailer operator, being a professional driver, should know better. Why is there a legitiamte reason for a trucker to monitor the California Highway Patrol? I have been passed by tractor-trailers at least going 80mph and a renegade Greyhound bus at 85mph near Bakersfield. The scanner is not intended as a tool to facilitate evasion of law enforcement. That is why scanners will be eventually be outlawed, because it takes just a few loosers to ruin the enjoyment of others. Thanks allot, and I did not even call you a asshole.

...And it also says that the equipment is NOT to generate interference to other licensed users of the same frequency set.....

That is an issue that I have - someone's 2.4GHz cordless phone is coming through on my repeater's 2.4 input (sometimes - not every time they use it). However, how many consumers really even bother to read that part 15 warning in the device's manual. 900 MHz and 2400 MHz have been trashed by appliance manufacturers.....

I think I saw some antenna's being sold as "stealth" antennas! Very small, black (?), and just stuck to the inside of the glass. Don't recall the name.

With all the "back doors" to software that the government is supposedly requiring I'm not sure that I would even trust PGP that much. Someone once said that the only way to REALLY encrypt a message is for two (or more) people to have EXACT copies of book or document and let each letter (or number) represent a page, line and character number. This could be very time consuming and messages would have to be kept short, or have a program to "convert" it for you, in which case you risk it being "captured" and all future correspondence being exposed.

Will trade my TAD VHF high-band USER-programmable transciever EVEN-UP for Bearcat BC-895XLT :AOR- MX-7000 or :AOR AR-2515 scanner in MINT condition w/ box and all factory "accessories".Transciever has 25 watts out:CTCSS tone encode/decode, and will program 99 (NINETY-NINE!!) channels of your choice between 138-174 Mhz. You can use it for both 2-meter AND public service/emergency service AT THE SALE TIME.!! Condition is 8.5 out of 10, and radio is in very good shape and works well(very sensitive!)LOUD audio and backlit bright backlit LCD display on key down.. Includes mobile bracket , mic, and wiring harness. Can be used BASE or MOBILE, but you will need to supply power for base use.
If interested, please Email me DIRECTLY at :Klarrg@aol.com (Kindly do NOT reply to site as I dont get here often)
Serious inquiries only, please! Sorry, no pics available as no digital camera and scanner died recently.(Radio resembles the Uniden HR-2510 in appearance)
THANKS ! (<: L.Wiland

I think it is fairly easy to tune with the rotary knob as well as the 4
arrow keys below the rotary knob.
sensitivity is not bad for a unit of this size.
i have used a 25 foot random wire to listen in on 5.696
and a few others with relative ease.

...How about the woman putting on make-up, or the hot-shot "someday I'm gonna be the CEO" reading the damned paper, or the person who's too afraid to be driving trying to pretend they're not? How about the ham trying to enter the PL code of a repeater he just found, or the teenager looking for the right station to listen to, or the model citizen soccer mom looking under the seat of her minivan for the bottle of juice her 6 month-old just dropped? How about the simple act of lighting a cigarette? Could sound pretty dangerous if twisted the right way. I won't even go into the fools who will spend nearly 30 seconds dialing their cell phones and never even glance at the road during that time once. No ill I expound on my dislike of the sudden and abrupt lane-changer who cuts people off, rides bumpers and high-beams anyone doing less than 80 in a 55mph zone, just to get to the toll plaza 6 seconds sooner than someone he/she cut off 10 minutes ago.

Before anyone jumps on truckers with lunacy, think about what so many other drivers are doing. To assume that this guy is a bad driver just because he wants to figure out a reception problem he has in his truck is just plain sh*tty! Maybe this is why he's asking the question here...to solve his problem so he can just do his radio listening thing and not have to be bothered "screwing" with a scanner.

A number of years ago when I spent 6 years driving over-the-road (endlessly between NYC and Highpoint, North Carolina doing the furniture thing making someone else rich), the last thing I wanted to be near was some fool in a car who really didn't know how to drive it and has no concept of simple realities of the road... like it's worse driving in a drizzel than in a downpour, for example. With a somewhat nationalized licensing structure, most of the poor drivers are no more. How many miles do people in their cars do a year? How many do over-the-road drivers do? Who has more experience? Instead of trashing anyone and everyone (in this case truck drivers) for no other reason than to get some recognition in a NG, how about looking at the dumb sh*t WE ALL DO (even "archimage") and back off those who really don't need the dumb sh*t.

Remember, EVERYTHING you have was once on a truck. You would not have ANYTHING if there were no trucks.

Archimage...you're an as*hole.

Theres a program called scanrecord that i use that I'm very pleased
with.
Works under Win-98 on a 466mhz machine with no problems. has a user
adjustable squelch/vox. Was shareware for free.....

Can anyone help me with directions of how to tap the discriminator
output on this scanner.
I have found one web site that says the chip to tap is TK-10421 M2 pin 11
but i can not find this chip or similar in my scanner

Any help appreciated
